## WOOL AND MOHAIR.

Wool production in the United States as a whole: 1909 and 1899.—The reports of the enumerators at both the Twelfth and the Thirteenth Censuses were somewhat deficient with respect to wool production, and it has been deemed necessary to make estimates to cover this deficiency.<sup>1</sup> Table 11 shows for the United States as a whole the actual returns of the Thirteenth Census and the estimated totals for 1909 and 1899, respectively.

Table 11	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces.	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.	598,047	39,644,046			
Wool produced, as reported, 1909.	458,311		35,336,830	241,882,318	\$54,964,020
On farms reporting sheep April 15, 1910.	423,580	31,636,132	33,849,587	232,357,186	52,708,093
On other farms.	34,731		1,487,243	9,525,132	2,255,927
Total production of wool (partly estimated):

1899.			33,849,587	226,882,318	\$52,964,020
Decrease, 1899 to 1909.			-1,487,243	-23,999,999	-4,259,935
Percent of increase.			-3.8	4.6	43.4

<sup>1</sup> A minus sign (—) denotes decrease.

According to the returns there were on April 15, 1910, 598,047 farms with sheep of shearing age, the number of such sheep being 39,644,000. Of these farms, however, there were only 423,580, with 31,636,000 sheep of shearing age, for which the enumerators reported the production of any wool in 1909. The number of fleeces reported for these farms was 33,850,000. The enumerators reported also the production of 1,487,000 fleeces

in 1909 on 34,731 farms with no sheep of shearing age April 15, 1910. The total number of fleeces reported was thus 35,337,000.

It is believed that a much closer approximation to the true total can be obtained by an estimate based on the assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. On the basis of such an estimate, the total production of wool in 1909 was 42,321,000 fleeces. The production in 1899, also in part estimated at that time, was 43,999,000 fleeces, so that there was a decrease of 1,679,000 fleeces, or 3.8 per cent. Nevertheless, the estimated total weight increased from 276,568,000 pounds in 1899 to 289,420,000 in 1909, or 4.6 per cent, and the reported average weight per fleece increased from 6.3 pounds to 6.8 pounds.

The value of the wool clip increased from \$45,670,000 in 1899 to \$65,472,000 in 1909, or 43.4 per cent. The average value per pound rose from 17 to 23 cents, and the average value per fleece from \$1.04 to \$1.55.

Wool production, by divisions and states: 1909 and 1899.—Table 12 shows, by geographic divisions, the number of fleeces of wool actually reported and the estimated total number produced in 1909. Comparisons of the reported production and the estimated total production will show that in some geographic divisions the returns of the enumerators were much more nearly complete than in others.

Table 13, on the following page, shows, by divisions, the amounts and percentages of increase or

decrease in the estimated total wool production from 1899 to 1909.

<sup>1</sup> There are various reasons for this failure of the enumerators to report the entire wool production. In some cases enumerators reported the number of sheep and neglected to report the wool produced in 1909. In other cases, farmers who did not have sheep in 1910 did have some in 1909, and it can not be assumed that the wool produced by such sheep in 1909 was in all cases reported, for the enumerator, after ascertaining that the farmer had no sheep in 1910, might neglect the subsequent inquiry as to wool produced in 1909. The number of farms which reported the production of wool in 1909 but no sheep on hand on April 15, 1910, was less than one-fourth of the number which reported sheep in 1910 but no wool production in 1909. Again, particularly in the case of tenant

farms, the farmer who occupied a farm at the time of the enumeration might not have occupied the same farm the preceding year. In cases of this sort the new occupant of the farm would be fairly well able to estimate the production of crops, from the acreage of stubble, but would often hesitate to make an estimate for the wool.

In making the estimate of the total production of wool which is presented in the table no account was taken of the 1,487,000 fleeces reported as produced in 1909 on farms with no sheep of shearing age in 1910, for this figure represents the wool production of only a part of the sheep which the estimate is designed to cover. Estimates were made for the several states, and combined to make the totals for geographic divisions and the United States.

There was a decrease between 1899 and 1909 in the number of fleeces produced in each of the divisions except the West North Central and Mountain divisions. The percentage of decrease was greatest in the New England division and next greatest in the Middle Atlantic, while the absolute decrease in number of fleeces was greatest in the Middle Atlantic division. In the Mountain division, which produced nearly half of the total wool clip of 1909, the increase in that year as compared with 1899 was 4.4 per cent. The percentages of increase or decrease in the weight of wool produced differ considerably from those based on the number of fleeces. In every division except the New England and Middle Atlantic there was a considerable increase between 1899 and 1909 in the value of wool produced, the increase in average value per pound more than offsetting the decrease in the quantity produced in four of the divisions.

Pacific.....	11.8	12.7	7.2	6.7	1.35	0.84	0.187	0.127

The distribution of the number of fleeces naturally conforms approximately to the distribution of the number of sheep. In 1909 the Mountain division produced 47 per cent of the total estimated number of fleeces; the East North Central 16 per cent; and the Pacific 11.8 per cent. These three divisions together contributed substantially three-fourths of the total number.

The average weight of fleeces in 1909 was higher in the three geographic divisions just named than in any of the other divisions, and decidedly lower in the three

southern divisions than elsewhere. The extreme range was from 7.3 pounds per fleece in the Mountain division to 3.9 pounds in the East South Central. The average weight was greater in 1909 than in 1899 in six of the divisions; in the South Atlantic and East South Central divisions it was slightly lower; and in the Middle Atlantic there was no change.

The average value of wool per pound in 1909, as reported by the producers, was lowest (18.7 cents) in the Pacific division. The maximum value (29.3 cents) is shown for the East North Central and South Atlantic divisions. The average value per pound increased materially in each of the geographic divisions between 1899 and 1909. In 1909 the average value per fleece was lowest (\$1.05) in the East South Central division and highest (\$2.11) in the East North Central.

Table 15, which appears on the following page, shows that in 1909 the leading states in the production of wool were Wyoming, Montana, New Mexico, Ohio, California, Idaho, Oregon, and Texas in the order named, each of these states having reported more than 2,000,000 fleeces.

**Mohair and goat hair: 1909 and 1899.**—Table 15 shows also the reported number of fleeces, and the weight and value of mohair and goat hair produced in 1909 and 1899, respectively, by geographic divisions and states.

The reports for the production of mohair are presumably about as defective as those for wool. The agricultural schedules, however, on account of the minor importance of goats, did not distinguish them by age, and it is scarcely possible to approximate the total production of mohair from the number of goats and kids of all ages taken together. In many sections of the country the number of goats on farms is insignificant and a considerable proportion of those which are kept are not shorn for mohair; consequently the production of mohair in several of the geographic divisions is of little significance.

The total reported production of mohair in 1909 was 1,683,000 fleeces, or more than three and one-half times as many as were reported in 1899. The reported weight of the mohair was 3,779,000 pounds, and the value, \$902,000. It is noteworthy that the average value of mohair per pound was somewhat lower in 1909 than in 1899, so that, although the average weight per fleece increased slightly during the decade, the average value per fleece decreased.

More than three-fifths of the mohair reported in 1909 was produced in the West South Central division, and nearly all of the remainder in the Mountain and Pacific divisions. The number of fleeces produced in the West South Central division was over five times as great in 1909 as in 1899, and in the Mountain division over three times as great. Very high relative increases also appear in some of the divisions where the number of fleeces produced is still very small.

## POULTRY AND EGGS.

United States as a whole: 1909 and 1899.—As in the case of wool, the reports of the enumerators as to the production of poultry and eggs in 1909 were somewhat incomplete, and it was deemed desirable to make estimates to cover this deficiency, particularly in order to make the data comparable with those for 1899, which included estimates. Table 16 shows the actual returns of the quantity and value of eggs and of poultry produced in 1909, with estimated totals for that year and for 1899. No estimates have been made regarding the sale of eggs and poultry in 1909, although this was done at the preceding census, and it is probable that the reported figures, which are also given in the table, are less than the true totals, although perhaps not so deficient as the reported production.

Table 16	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.	5,585,032	295,880,190		
On farms reporting eggs produced in 1909.	4,833,759	273,255,924		
On other farms.	751,273	22,624,266		
Eggs produced, as reported, 1909.	4,833,507		Dozens.	
Total production of eggs (partly estimated):			1,457,385,772	\$281,157,980
1909.			1,591,311,371	305,688,960
1899.			1,293,662,433	144,240,541
Increase, 1899 to 1909.			297,648,938	162,448,419
Per cent of increase.			23.0	112.6
Eggs sold, as reported, 1909.	3,860,067		926,465,787	180,768,249
Fowls on farms April 15, 1910:				
On farms reporting poultry raised in 1909.	4,761,774	270,540,564		
On other farms.	823,258	25,339,626		
Poultry raised, as reported, 1909.	4,832,496		No. of fowls.	
Total poultry raised (partly estimated):			445,650,124	185,390,856
1909.			488,468,354	202,506,272
1899.			136,830,152	136,830,152
Increase, 1899 to 1909.			65,676,120	65,676,120
Per cent of increase.			48.0	48.0
Fowls sold, as reported, 1909.	3,038,932		153,600,169	75,273,524

The total number of farms which reported fowls on hand April 15, 1910, was 5,585,032, and the number of fowls, 295,880,000. Of these farms, however, the enumerators reported the production of eggs for only

4,833,759, the number of fowls on such farms in 1910 being 273,256,000, or about 8 per cent less than the total. The number of eggs reported (including that on the small number of farms, about 50,000, which reported eggs produced in 1909 but no fowls on hand in 1910) was 1,457,386,000 dozens. These returns may somewhat understate the production of eggs even on the farms to which they relate, since farmers seldom keep accurate records of egg production and are apt to underestimate it, particularly by underestimating the home consumption; but there is no means of judging the extent of the deficiency due to this cause. An estimate may, however, be made for farms which reported no eggs produced in 1909, although they had fowls in 1910.<sup>1</sup> In this way a total of 1,591,311,000 dozens is obtained as the approximate production of eggs in the country in 1909. The production of 1899 (also partly estimated) was 1,293,662,000 dozens, the increase in 1909 as compared with 1899 being 23 per cent.

The value of eggs produced in 1909 (including estimates) was \$306,689,000, or considerably more than twice as much as that for 1899. The average value per dozen, as reported by the farmers, increased from \$0.111 to \$0.193.

About three-fourths of the farmers who reported the production of eggs in 1909 reported also that they sold eggs during that year. The number sold by them, as reported, was 926,466,000 dozens.

<sup>1</sup> The reasons for the incompleteness of the reports of poultry and eggs produced are similar to those in the case of wool, set forth in a preceding footnote. The method of estimate used for poultry and eggs is slightly different from that used in the case of wool, and theoretically somewhat less correct. Instead of calculating the total production by applying to the total number of fowls the ratio between (1) the number of fowls on hand April 15, 1910, on farms reporting also the production of fowls or eggs in 1909, and (2) the total reported production of fowls or of eggs in 1909 on the same farms, it was calculated from the ratio between (1) the number of fowls on hand April 15, 1910, on farms reporting also the production of fowls or eggs in 1909, and (2) the total reported production of fowls or eggs in 1909, which includes a small production on farms not reporting fowls on hand in 1910. The quantity produced on farms of the latter class was so insignificant as not to justify the additional labor of a separate tabulation.

Table 17	FOWLS ON HAND APRIL 15, 1910						EGGS PRODUCED, AS REPORTED: 1909		Total production of eggs, partly estimated (dozens): 1909	FOWLS RAISED, AS REPORTED: 1909		Total number of fowls raised, partly estimated: 1909

On the basis of similar estimates for farms with incomplete reports, the total number of fowls raised in 1909 (including those sold, killed, or on hand April 15, 1910) was 488,468,000 and their value \$202,506,000. The census of 1900 did not call for the number of fowls raised in 1899, but the value of fowls raised in that year (partly estimated) was \$136,830,000, the increase between 1899 and 1909 being 48 per cent. The number of fowls reported sold in 1909 was about one-third of the number raised.

**Divisions and states: 1909 and 1899.**—Table 17, on the preceding page, shows, by geographic divisions, the production of fowls and of eggs as reported for 1909, with estimates of the total production.

There is a decidedly greater difference in the Mountain, West South Central, and Pacific divisions than elsewhere between the reported production of eggs and fowls and the estimated total production.

Table 21 shows, by divisions and states, the total number and value of eggs produced and the total value of fowls raised (including estimates) in 1909 and 1899, respectively, and also the sales as reported.

The relative importance of the several geographic divisions in the production and sale of eggs and of fowls may be more conveniently judged by Table 18, which shows the percentages of the totals which were reported from each division.

Table 18

DIVISION.	Eggs produced.								Quantity of eggs sold: 1909	Fowls raised.				Number of fowls sold: 1909
	Quantity.				Value.					Number: 1909	Value.

Pacific.....	4.4	3.1	5.7	4.4	4.5	3.0	3.8	3.0				3.8		

The distribution of the production of eggs and of poultry among the divisions naturally conforms more or less closely to the distribution of the number of fowls on hand. In 1909 the West North Central division produced 28 per cent of the eggs and 25.4 per cent of the fowls, the corresponding percentages for the East North Central division being 24.7 and 21, respectively. The West South Central division ranked third in the production of eggs, but the South Atlantic ranked third in the number of fowls raised.

In some of the divisions a considerably larger proportion of the eggs produced and of the fowls raised

are sold than in other divisions, so that certain differences appear between the percentages showing the distribution of sales and those showing the distribution of production.

Table 19 shows, by geographic divisions, the increase in the quantity and value of eggs produced, and in the value of fowls raised, between 1899 and 1909.

Table 19

DIVISION.	INCREASE: 1899 to 1909					
	Eggs produced.				Fowls raised.	
	Quantity (dozens).	Per cent.	Value.	Per cent.	Value.	Per cent.

Pacific.....	29,774,573	75.1	11,200,859	178.2	3,543,686	85.0

The absolute increase, both in the quantity of eggs produced and in the value of fowls raised, was greatest in the West North Central division, but the percentages of increase were higher in some of the divisions of the South and the West.

Table 20 shows, by geographic divisions, the average value of eggs and of fowls produced and sold, respectively, in 1909 and of eggs produced in 1899.

Table 20

DIVISION.	AVERAGE VALUE.				
	Eggs per dozen.			Fowls.

Pacific.....	0.252	0.159	0.253	0.521	0.560

The average value of eggs produced in 1909, as reported by the farmers, ranged from 27.5 cents per dozen in the New England division to 15.9 cents in the West South Central. In most divisions the average value of eggs sold was reported at a slightly higher figure than that of eggs produced. In every division the average value of eggs produced was very much higher in 1909 than in 1899. The average value of all fowls raised in 1909 ranged from 66.1 cents each in the New England division to 29.9 cents in the West South Central, while the value of those sold ranged from 70.9 cents to 34.5 cents.

## PRODUCTION AND SALES OF EGGS AND POULTRY, BY DIVISIONS AND STATES.

## HONEY AND WAX.

United States and states: 1909 and 1899.—Table 22 shows, for each division and state, the quantity of honey and of wax produced, respectively, and

their combined value, in 1909 and 1899. The figures are as reported by the enumerators, and probably somewhat understate the true production.

<sup>1</sup> Includes Indian Territory.

The total production of honey in the United States in 1909 was reported as 54,815,000 pounds, a decrease of 10.3 per cent as compared with 1899. Wax, which is a relatively unimportant product, showed a much greater decrease. The combined value of honey and wax in 1909 was \$5,992,000, or 10 per cent less than in 1899.

The geographic distribution of the production of honey naturally corresponds quite closely to that of the colonies of bees. The business of raising honey is very generally distributed throughout the country. There was a decrease in the production of honey between 1899 and 1909 in each of the geographic divisions except the Mountain and the Pacific.

## DOMESTIC ANIMALS SOLD OR SLAUGHTERED ON FARMS.

United States as a whole.—Table 23 shows, for the United States as a whole, the number and value of

each class of domestic animals sold or slaughtered on farms during 1909.

The value of all domestic animals sold during 1909 was \$1,562,937,000, and that of animals slaughtered on the farm \$270,239,000, making a total of \$1,833,175,000. To the total value of animals sold, cattle (including calves) contributed \$710,015,000, or 45.4 per cent; horses, mules, and asses and burros together

\$306,457,000, or 19.6 per cent; swine \$463,011,000, or 29.6 per cent; and sheep and goats \$83,453,000, or 5.3 per cent. The number of cattle and sheep slaughtered on farms was equal to but a very small fraction of the number sold, but the number of swine slaughtered was more than two-fifths as great as the number sold.

The value of domestic animals sold as reported for 1909 (\$1,562,937,000) is not at all comparable with the value of animals sold as reported at the Twelfth Census (\$722,614,000), for the reason that the inquiry at the Thirteenth Census related to all animals sold from the farm, while that at the Twelfth Census related only to the sale of animals which had been raised on the farm reporting.

A very considerable number of the animals sold during any given year are animals previously purchased by the farmers, often during the same year. The practice of buying cattle, swine, and sheep to fatten for market is very common among farmers in some sections. Consequently the gross sales of domestic animals include much duplication. On the other hand, if the sales of animals not raised on the farm reporting are excluded, the additional value (often very great) which such animals may acquire between the time of purchase and the time of sale is omitted from the statistics. Finally, it should be noted that the value of animals sold or slaughtered, no matter how determined, by no means represents the true product of the stock raising industry. An animal, such as a horse or a cow, for example, which is raised by a farmer and retained indefinitely for draft or dairy purposes is just as much a product of agriculture as one sold or slaughtered; this is true, in fact, even though such animal merely replaces another which dies of age or disease.

**Divisions and states.**—Table 24 shows, by geographic divisions, the combined value of all domestic animals sold or slaughtered on farms in 1909.

DIVISION.	VALUE OF ALL DOMESTIC ANIMALS SOLD OR SLAUGHTERED ON FARMS IN 1909.			PER CENT OF TOTAL VALUE OF ANIMALS.		
	Total.	Sold.	Slughtered.	Sold or slughtered.	Sold.	Slughtered.

W. North Central	715,336,435	664,809,849	50,526,586	39.0	42.5	18.7
South Atlantic	102,508,692	56,917,558	45,591,034	5.6	3.6	16.9
E. South Central	129,996,105	91,782,197	38,213,908	7.1	5.9	14.1
W. South Central	181,003,205	149,019,393	31,983,812	9.9	9.5	11.8
Mountain	100,115,107	93,035,933	7,079,154	5.5	6.0	2.6
Pacific	61,310,240	53,874,678	7,435,562	3.3	3.4	2.8

Of the total value of animals sold or slaughtered on farms, the West North Central division reported 39 per cent, the East North Central 23.1 per cent, and the West South Central 9.9 per cent, these three divisions together reporting nearly three-fourths of the total. With respect to the value of domestic animals slaughtered on farms, the East North Central division ranked first, followed by the West North Central and the South Atlantic.

Table 25 shows, by geographic divisions, the number and value of each separate class of domestic animals sold or slaughtered on farms during 1909.

DIVISION.	CATTLE (EXCLUDING CALVES).		CALVES.		Horses sold.	Mules sold.	Asses and burros sold.	SWINE.		SHEEP.		GOATS.

In every geographic division except the East North Central the value of cattle and calves sold in 1909 exceeded that of any other class of animals, but in the East North Central division the value of swine sold was greater than that of cattle and calves.

Marked differences appear among the geographic

divisions with respect to the ratio between the number of animals—particularly swine—sold and the number slaughtered on the farm. In the leading hog raising sections, the East and West North Central divisions, the number sold in 1909 was several times greater than the number slaughtered on the farm, but

in the Middle Atlantic, South Atlantic, and East South Central divisions the number sold was less than the number slaughtered.

It should be noted that the wide variations in average value for asses and burros sold are due to the fact

that in some sections the sales include many high-priced breeding jacks, while in others they represent chiefly pack burros.

Table 26 presents data regarding animals sold or slaughtered on farms in individual states.

NUMBER AND VALUE OF DOMESTIC ANIMALS SOLD OR SLAUGHTERED ON FARMS, BY STATES: 1909.

Table 26	VALUE OF ALL DOMESTIC ANIMALS.		NUMBER, BY CLASSES.

## CHAPTER 13.

### FARM CROPS—ACREAGE, PRODUCTION, AND VALUE.

(WITH STATISTICS OF PURCHASE AND SALE OF CROPS SUITABLE FOR FEEDING ANIMALS, AND OF FARM EXPENDITURES FOR LABOR AND FERTILIZERS.)

**Introduction.**—This chapter presents in condensed form the main results of the Thirteenth Census of the United States with reference to the production of crops in 1909. It also contains statistics relating to the purchase and sale of crops suitable for feeding animals and to farm expenditures for labor and fertilizers. Statistics pertaining to Alaska, Hawaii, Porto Rico, and other outlying possessions are not included in the tables.

The tables give figures for each crop by states, though in the case of less important crops states are not named where the production is insignificant. All of the data published in this chapter regarding any particular state can also be found in the supplement for that state, where additional detail concerning the acreage and production of the principal crops by counties is also published.

The tables in general state the acreage, production, and value of each crop, by states; for the census years 1909 and 1899. In the case of orchard and tropical fruits, grapes, and nuts, the census inquiry was as to

the number of trees or vines rather than the acreage. For certain seeds and for straw and cornstalks, acreage was not tabulated because it would largely duplicate the acreage of primary crops. Forest products and maple sugar and sirup are mainly derived from unimproved land and statistics of acreage, even if they could be obtained accurately, would have little significance.

In any comparison of the crop of one year with that of another, acreage, where reported, forms a more accurate index than either the amount or the value of the crop. The crop yield is subject to variations from year to year, according to the prevalence of adverse or favorable weather conditions, while aggregate values reflect changes in the price per unit as well as in the amount of the crop. On the other hand, in the comparison of one crop with another the respective acreages do not indicate the relative importance so accurately as do aggregate values, since the value of the yield per acre for one crop may be much greater than for another.

#### CROPS IN GENERAL.

##### UNITED STATES AS A WHOLE.

**Acreage and value of all crops: 1909 and 1899.**—The principal results of the census of agriculture which relate to crops for 1909 and for 1899 for the United States as a whole are given in Table 1, on the following page.

The total value of all the crops of the United States in 1909 was \$5,487,000,000, as compared with \$2,999,000,000 in 1899. The increase in the later year as compared with the earlier was therefore \$2,488,000,000, or 83 per cent.

The value of the crops for which reports of acreage were secured amounted in 1909 to \$5,074,000,000, or about nine-tenths of the value of all crops. The total acreage of crops with acreage reports in 1909 was 311,293,382. In April, 1910, the land in farms in the United States, according to the census returns, amounted to 878,798,325 acres, of which 478,451,750 acres were improved. The crops with acreage reports, therefore, occupied 35.4 per cent of the total land in farms and 65.1 per cent of the total improved land. If the acreage of fruit and nut crops grown on improved land were added, the proportion of improved land occupied by all crops would probably be between 66 and 67 per cent. The crops with acreage reports

in 1899 occupied 283,218,280 acres, or 68.3 per cent of the improved land reported at the census of 1900. The area devoted to these crops increased by 9.9 per cent between 1899 and 1909, while improved land in farms increased by 15.4 per cent in the same period. The improved land not occupied by the crops specified includes land in improved pastures, land occupied by orchards, for which acreage was not reported, land lying fallow, and land in house yards and barnyards. It is possible that, because of the difficulty in discriminating precisely between improved and unimproved land, the figures for the improved land at the last two censuses are not wholly comparable. Attention is called to the fact that improved farm land, as reported, increased by 64,000,000 acres, while land in crops for which the acreage was given increased only 28,000,000 acres. It should be noted, however, that the acreage devoted to orchards and vineyards probably increased during the decade. There was also an increase of 20.4 per cent in the number of dairy cows, and doubtless a considerable increase in the improved land in pastures. In addition to these increases, it is quite probable that the amount of land lying fallow is greater at the present time than it was a decade ago because of the constant cropping.

## ACREAGE, PRODUCTION, AND VALUE OF ALL CROPS, FOR THE UNITED STATES: 1909 AND 1899.

Table 1	ACREAGE.				PRODUCTION.				VALUE (DOLLARS).

<sup>1</sup> A minus sign (—) denotes decrease.<sup>2</sup> Estimated.<sup>3</sup> Does not include coconuts, which are reported by number.<sup>4</sup> Includes value of coconuts.

The total value of crops in 1909 was equal to \$59.66 per capita of the population of the United States, while the value per capita in 1899 was \$39.46.<sup>1</sup> There were 6,361,502 farms in the United States in 1910, so that the value of crops in 1909 was equal to an average of \$863 per farm, while the average value of crops per farm for 1899 was \$523.<sup>2</sup>

The Census Bureau has made no attempt to ascertain the total net value of farm products for 1909, including both that of crops and that of animal products. Merely to add the value of these two groups of products together would involve extensive duplication, since large quantities of the crops reported are fed to the animals on the farms. It is impossible to ascertain accurately the amount of such duplication, and the attempt to do so which was made at the Twelfth Census was not considered satisfactory in its results. For this reason the relative importance of crops in the aggregate as a factor in the agricultural production of the United States can not be determined with accuracy.

Relative importance of different crops: 1909 and 1899.—In comparing the statistics for individual crops shown in Table 1, it should be noted that the returns are probably more accurate for the leading crops than for the minor crops. The reported production of fruits and vegetables is in all probability less than the true production, as a large proportion of these products are consumed on the farm and farmers are apt to underestimate the amount of such home consumption.

The relative importance of the various individual crops and groups of crops can best be judged from Table 2, which shows, for 1909 and 1899, the percentage of the total improved land occupied by each important crop for which acreage was reported and the percentage which the value of each important crop formed of the total for all crops. The table gives also the average value of each crop per acre wherever data are available.

In 1909, as already stated, crops with acreage reports occupied 65.1 per cent of the total improved land. Cereals occupied 40 per cent—nearly five-eighths of the total acreage of land in crops with acreage reports—hay and forage 15.1 per cent, and cotton 6.7 per cent. These three leading groups together thus occupied 61.8 per cent of the improved land. The distribution of the total value is somewhat different. Cereals in 1909 contributed 48.6 per cent of the total value of crops, hay and forage 15 per cent, cotton (including cotton seed) 15 per cent, vegetables (including potatoes and sweet potatoes and yams) 7.6 per cent, fruits and nuts 4 per cent, forest prod-

ucts of farms 3.6 per cent, tobacco 1.9 per cent, and sugar crops 1.1 per cent, leaving only 3.1 per cent for the other minor crops. Among the individual crops, corn, which occupied 20.6 per cent of the improved farm land in 1909 and contributed 26.2 per cent of the total value of crops in that year, is the most important. None of the other cereals has so great a value as either hay and forage or cotton (including cotton seed). As judged by value, wheat ranks fourth among the crops, oats fifth, and (disregarding forest products as being a combination of items) potatoes sixth.

There was no change in the ranking of the leading crops between 1899 and 1909, but there were, nevertheless, considerable changes in the proportion of improved land occupied by some of them, and in the proportion contributed to the total value of crops.

<sup>1</sup> Less than one-tenth of 1 per cent.

By reason of the fact that the wheat area diminished and that of corn failed to keep pace with the increase in improved land, both of these leading crops, and the cereal group as a whole, occupied a smaller percentage of the improved farm land of the country in 1909 than in 1899, while hay and forage

<sup>1</sup> These per capita figures are based on the population of the United States on April 15, 1910, and June 1, 1900, respectively.

<sup>2</sup> These averages are based on the number of farms in the United States on April 15, 1910, and June 1, 1900, respectively.

## ABSTRACT OF THE CENSUS—AGRICULTURE.

LAND AREA, PERCENTAGE DISTRIBUTION: APRIL 15, 1910.

(CROP ACREAGE: 1909.)

IMPROVED LAND, PERCENTAGE DISTRIBUTION: 1909.

IMPROVED LAND, PERCENTAGE DISTRIBUTION: 1899.

VALUE OF ALL CROPS, PERCENTAGE DISTRIBUTION BY CROPS: 1909.

VALUE OF ALL CROPS, PERCENTAGE DISTRIBUTION BY DIVISIONS: 1909.

and cotton occupied a larger percentage. Hay and forage as well as the cereals, however, contributed a somewhat smaller proportion of the total value of crops in 1909 than in 1899, while cotton (including cotton seed) contributed a materially larger proportion. The combined acreage of cereals increased only 3.5 per cent during the decade 1899-1909, while that of hay and forage increased 17.2 per cent and that of cotton 32 per cent. Certain minor crops show higher percentages of increase in acreage than these leading crops.

The average value of crops per acre, for all crops with acreage reports combined, was \$9.77 in 1899, and \$16.30 in 1909. Naturally great differences appear among the individual crops with respect to average value per acre. These differences in no way indicate the relative profitableness of the different crops, however, as some crops require the use of much more valuable land and more expensive methods of cultivation than others.

Relation of prices to increase in value: 1899 to 1909.—A large part of the extraordinary increase in the total value of farm crops between 1899 and 1909 is attributable to higher prices. While the acreage of crops with acreage reports increased only 9.9 per cent, the value of such crops increased 83.3 per cent. The percentages of increase in the quantity of the various individual crops, as shown in Table 1, were in

nearly all cases much less than the percentages of increase in the value. Thus, for all cereals taken together, the production increased only 1.7 per cent, while the value increased 79.8 per cent; for hay and forage the production increased 23 per cent and the value 70.2 per cent; and for cotton (including cotton seed) the production increased 11.7 per cent and the value 122.5 per cent.

Table 3 shows, for the leading individual crops for which both quantity produced and value were reported at both censuses, the average value per unit in 1899 and 1909, with the percentage of increase. It also shows the value which would have been reported for each crop in 1909 if the average value per unit had been the same in that year as in 1899. In each case a comparison of the value of the 1909 crop computed on this basis with the actual value of the crop of 1899 shows the increase in value during the decade which was due to increased production; while a comparison of this computed value with the actual value of the crop in 1909 shows the increase during the decade which was due to the increase in prices. For certain crops, principally fruits and nuts, the values were not reported separately in 1900, and for certain other crops quantities were not reported at either census, but the table covers nine-tenths of the crops of the country as measured by value.

<sup>1</sup> A minus sign (—) denotes decrease.

The total reported value of crops in 1899, compared in Table 3, was \$2,691,979,000, and the total reported value of the same crops in 1909, \$4,934,490,000, an increase of 83.3 per cent. Had the prices of 1899 prevailed, however, the value of these crops in 1909 would have amounted to \$2,962,358,000, or an increase of only 10 per cent over 1899, which indicates substantially the increase in the volume of the product. The difference between \$2,962,358,000 and \$4,934,490,000, or \$1,972,132,000, represents the amount added to the value of these crops by reason of the increase in prices over those for 1899, the average percentage of increase in prices being thus 66.6. For the most important individual crop, corn, the table shows that the actual value in 1909 was \$1,438,554,000, or 73.7 per cent more than the value of the crop of 1899. If there had been no change in value per bushel the value of the 1909 crop would have been \$792,736,000, or less than the value of the crop of 1899. The difference, \$645,818,000, represents the addition to the value of the corn crop of 1909 by reason of the increase of 81.5 per cent in the average value per bushel.

**Increase of crop production and consumption: 1899 to 1909.**—The percentage given above, 10 per cent, as representing the increase in the value of the crops of 1909, on the basis of the 1899 prices, over the value of the same crops in 1899, is nothing else than a consolidated expression of the general increase in the quantity of crops produced. Covering, as it does, nine-tenths of the crops of the country, it may properly be compared with the increase of 21 per cent in the population of the United States between 1900 and 1910. During the decade the increase in the number of farms was 10.9 per cent, the increase in rural population 11.2 per cent, and the increase in urban population 34.8 per cent. As already stated, the total acreage of crops with acreage reports increased 9.9 per cent between 1899 and 1909. It would appear, therefore, that in the aggregate there was practically no difference in the average quantity of crops produced per acre in the two years.

The increasing consumption of crops in the country has been supplied only in part by an increased production, the remainder being furnished in large measure by a curtailment of agricultural exports. Thus in the fiscal year ending June 30, 1900, the exportations of domestic breadstuffs amounted to \$262,744,078<sup>1</sup> in value, while in the fiscal year 1910 the exports of such commodities had sunk to almost one-half of this value, namely, \$133,191,330.<sup>1</sup> In view of the increase of prices in the 10 years, it will readily be understood that the exports have decreased in quantity considerably more than appears from the decrease in value.

**Acreage of leading crops: 1879 to 1909.**—Because of the difficulties arising from changes in prices, as well as because of some differences in the classification of

crops, a complete comparison of the census returns for 1909 with those obtained by the censuses prior to 1899 is not practicable. For some of the leading crops, however, a comparison with the censuses of 1879 and 1889, as well as of 1899, can be made upon the basis of acreage. The acreage of all cereals in 1879 was 119,000,000. It advanced in 1889 to 140,000,000 and in 1899 to 184,000,000. The increase in the acreage of some other important crops was more marked. In 1879 the acreage of hay and forage was 30,000,000, advancing to 53,000,000 in 1889, to 62,000,000 in 1899, and in 1909, to 72,000,000, which was considerably more than double the acreage of 30 years before. During the same period of time the cotton acreage has more than doubled, the acreage in 1879 being 15,000,000 and in 1909 32,000,000. Tobacco advanced comparatively little in acreage from 1879 to 1889 (639,000 to 695,000), but in 1899 tobacco was harvested from 1,101,000 acres and in 1909 from 1,295,000. Thus, among these four crops for which acreage figures are available for four censuses, the increase in the combined cereals has been less than that of the other crops, and in their proportion of the aggregate acreage represented by these crops the cereals are at the present time less important than they were 30 years ago. For these four crops the increase in the acreage from 1879 to 1909 amounted to 80.5 per cent, while the population of the country increased 83.4 per cent between 1880 and 1910.

#### DIVISIONS AND STATES.

**Distribution of all crops, by divisions: 1909 and 1899.**—Table 4 shows for each of the nine geographic divisions and also for certain larger sections of the country the total acreage and value of all crops with acreage reports, and the total value of all crops, including those without acreage reports, in 1909 and 1899. Table 5 gives percentages and averages based on Table 4. The North includes the first four geographic divisions, the South includes the next three, and the West the last two.

In the West North Central division, where the proportion of improved land occupied in 1909 by crops with acreage reports was highest, these crops occupied 69.8 per cent of the total improved farm acreage in that year, while in the Pacific division, where the proportion was lowest, they occupied 48.3 per cent. The Pacific division has a larger amount of land devoted to fruits and cultivated nuts than any of the other geographic divisions, but it is probable that even in that division the land in such crops in 1909 scarcely exceeded one-sixth of the land in crops for which the acreage was reported.

Of the total value of all crops those without acreage reports represent somewhat less than 10 per cent. Such crops are relatively important in the New England and Pacific divisions, where fruit crops and forest

<sup>1</sup> See Statistical Abstract of the United States, 1910, Table 217, page 431.

products of farms contribute a considerable proportion of the value of all crops. The contribution of such

crops to the total value is relatively least in the West North Central division.

In the value of all crops (including those without acreage reports) the West North Central division ranks first, its crops in 1909 being valued at \$1,445,909,000, or 26.4 per cent of the total for the country. This division, however, has 34.3 per cent of the improved farm land in the United States. The East North Central division contributed more than one-fifth of the total value of crops in 1909, and the South Atlantic nearly one-seventh. Of the value of all crops the North reported 56.9 per cent, the South 35 per cent, and the West 8.1 per cent. The proportion east of the Mississippi was 54.1 per cent and that west of the Mississippi 45.9 per cent.

In all of the geographic divisions except the New England and South Atlantic, crops with acreage reports occupied a somewhat smaller proportion of the improved acreage in 1909 than in 1899. In the New England and Middle Atlantic divisions the acreage in such crops decreased between 1899 and 1909; and a decrease would doubtless appear for all crops

combined if reports of acreage were available for all. The increase in the acreage of crops with acreage reports for the North (mainly in the West North Central division) was 6.8 per cent; that for the South (mainly in the West South Central division), 14.2 per cent; and that for the West, 23.7 per cent. The table shows that the increase for the territory east of the Mississippi was only 1.1 per cent, while for that west of the Mississippi it was 18.1 per cent.

The absolute increase in value of crops between 1899 and 1909 was greatest in the West North Central division (\$708,999,000), but the percentage of increase in that division (96.2) was less than that in the Mountain division (188.9), that in the South Atlantic division (112.7), or that in the Pacific division (99.8 per cent). For the North the increase in value of crops was 72.2 per cent, for the South 94.2 per cent, and for the West 125.4 per cent.

Relative importance of leading crops in the total production of each division, section, and state: 1909.—Tables 6, 7, and 8 have for their purpose the indication of the relative importance of the principal individual crops in the agriculture of each geographic division, section, and state.

The distribution of the crops varies greatly in the different divisions and sections. As shown in Table 6, the value of cereals constituted 75.4 per cent of the total value of crops in the West North Central division and 65.4 per cent in the East North Central, but in no other division did the proportion exceed 35 per cent, and in New England it was only 7.6 per cent. As judged by value, hay and forage is the most important group of crops in the New England, Middle Atlantic, and Mountain divisions, while cotton is the most important crop in each of the three southern divisions; in the South as a whole the value of the cotton crop (including cotton seed) in 1909 was 42.7 per cent of the total value of all crops.

<sup>1</sup> For corresponding percentages for important individual cereals see Tables 22 for corn, 24 for wheat, and 26 for oats.  
<sup>2</sup> Includes small amounts for grains and seeds not shown separately.  
<sup>3</sup> Includes small amounts for hops, hemp, and other minor crops not shown separately.  
<sup>4</sup> Less than one-tenth of 1 per cent.

Vegetables, including potatoes and sweet potatoes and yams, are of considerable importance in every geographic division, but particularly in the New England and Middle Atlantic divisions. Fruits and nuts contributed 21.4 per cent of the total value of crops in the Pacific division in 1909, and in the New England and Middle Atlantic divisions these crops were also relatively important, as were likewise flowers and plants, nursery products, and forest products.

Tobacco contributes a considerable proportion of the value of crops in the New England, South Atlantic, and East South Central divisions; and the sugar crops are of considerable importance in the West South Central division. Most of the other crops are of little relative significance in any division of the country.

The relative importance of the leading crops in each division and section from the standpoint of acreage is indicated by Table 7.

The distribution of acreage among the several crops in general conforms more or less closely to the distribution of the total value, so that little additional comment is necessary.

In most of the geographic divisions the cereals, hay and forage, and cotton together occupy nine-tenths or more of the total acreage of crops with acreage reports. No other crop or group of crops approaches these in importance as judged by acreage, in any division. Table 8 shows for individual states, by percentages, the relative importance of the principal crops from the standpoint of value and acreage.

Table 8

Table 8	PER CENT OF TOTAL VALUE OF CROPS (1909) REPRESENTED BY—													PER CENT OF IMPROVED FARM LAND (1909) IN—

the improved farm land and of the total acreage of crops with acreage reports is also shown. In this table the combined cereals are treated as a unit; the corresponding distribution of the individual cereals among the divisions and sections is shown in Table 19.

Several of the most important crops, including the cereals as a group, hay and forage, potatoes, miscellaneous vegetables, small fruits, flowers and plants, and nursery products, are very widely distributed over the country.

The distribution of the cereal acreage corresponds more closely to the distribution of the total acreage of improved farm land than does that of any other class of crops, but the East and West North Central divisions report somewhat larger percentages of the cereal acreage than of the improved farm land. Few of the remaining crops are very widely distributed. Several crops—cotton, sugar cane, sweet potatoes and yams, and peanuts—are largely concentrated in the southern divisions.

1 Less than one-tenth of 1 per cent.

The distribution among the geographic divisions and sections of the value of those crops of any importance for which there were no reports of acreage is shown in Table 10. For comparison, the distribution of the value of all crops and of the value of crops with acreage reports is shown.

Table 10

1 Less than one-tenth of 1 per cent.

The geographic distribution of the value of crops with no acreage reports is very different from that of crops with acreage reports. Whereas the Pacific divi-

sion reported only 4.2 per cent of the value of crops with acreage reports and 4.6 per cent of the improved farm land, that division reported 16.4 per cent of the value of crops with no acreage reports. This is largely due to the concentration of the production of fruits and nuts on the Pacific coast. The West North Central division reported 27.7 per cent of the value for the crops with acreage reports, but only 10.3 per cent for the crops with no acreage reports.

**Acreage and value of all crops, by states: 1909 and 1899.**—Table 11 presents by states, for 1909 and 1899, the acreage and value of all crops with acreage reports and the value of all crops, including those without acreage reports.

The map on page 371 shows the distribution of the value of all farm crops among the states.

It will be seen that, as judged by the total value of all crops, Illinois was in 1909 the leading agricultural state, followed by Iowa, Texas, Ohio, Georgia, Missouri, Kansas, New York, and Indiana, each reporting more than \$200,000,000. The first four states named occupied the same rank in 1899, but Georgia ranked only fifteenth among the states in that year.

With respect to the progress made by these leading states from 1899 to 1909, it may be noted that only in Georgia and Kansas did the rate of increase for the total value of all crops exceed that for the United

States as a whole. Moreover, these two states, together with Texas, are the only ones in the group which report any considerable extension of the acreage of crops with acreage reports. In Indiana the acreage of such crops was 1.8 per cent higher than in 1899, but Illinois, Iowa, Missouri, Ohio, and New York all report a decrease in acreage.

During the period 1899 to 1909 the most conspicuous relative advances in the value of all crops took place in the states of Idaho, Washington, North Dakota, Wyoming, Oklahoma, and Colorado, in each of which the crops of 1909 were more than three times as valuable as those of 1899. Except in North Dakota and Oklahoma, these high rates of increase represent comparatively small absolute increases.

The greatest absolute increase in the value of all crops occurred in Illinois, where it amounted to

\$157,000,000. Other states in which the absolute increase exceeded \$100,000,000 were Georgia, Texas, North Dakota, Iowa, Nebraska, and Kansas.

During the decade there was an increase of over 1,000,000 acres in land devoted to crops in each of the following states: North Dakota, Oklahoma, South Dakota, Texas, Nebraska, Kansas, Washington, Georgia, and Colorado. New Mexico reported the highest percentage of gain, 222.8, followed by North Dakota, Oklahoma, Wyoming, Washington, and Idaho. In Iowa and California the loss in acreage reported was over one and one-half million, and in New York and Pennsylvania it exceeded half a million. Besides these four states fourteen others had less land in crops in 1909 than in 1899, the relative decrease being greatest in California, followed by New Hampshire, Connecticut, and Massachusetts.

### ALL FARM CROPS—ACREAGE AND VALUE, BY STATES: 1909 AND 1899.

## ALL FARM CROPS.

VALUE, BY STATES: 1909.

**Sale and purchase of crops suitable for feeding animals: 1909.**—In the case of some minor crops the entire product, or the larger part of it, is usually retained upon the farm for family consumption; this is notably true of vegetables. Of certain other crops practically the entire quantity, except such as is required for seed, is sold. These crops, which are frequently referred to as money crops, are mainly intended for human consumption, direct or indirect. Cotton, tobacco, sugar cane, hemp, hops, and to a slightly less extent wheat, are examples. Besides crops of these two classes, there are several crops, the most important being corn, oats, barley, and hay and forage, which are used chiefly as feed for animals. A majority of the farmers who raise these crops retain the entire product or a considerable proportion of it for their

own animals; others sell their surplus mainly for consumption by animals in cities, towns, and villages, or by animals on farms where such crops are not raised or are raised only in small quantities.

At the census of 1910 the agricultural schedules contained inquiries designed to ascertain not only the quantity and value of the leading "feedable" crops produced, but also the quantity and value of such crops sold and the amounts expended by farmers for the purchase of feed for animals. Table 12 presents statistics of such sales and purchases by geographic divisions and sections, and Table 15 shows them in less detail by states. It is probable that these statistics are somewhat less accurate than those of crop production, and are on the whole an understatement both of sales and of purchases.

<sup>1</sup> An asterisk (\*) indicates an excess of expenditures over receipts from sales.

The total amount reported by farmers as received during 1909 from the sale of corn, oats, barley, and hay and forage was \$509,254,000. The amount reported by farmers as expended for feed for live stock was \$299,840,000. The excess of receipts from sale over expenditures for purchase was \$209,414,000, or 41.1 per cent. This excess should represent in a rough way the value of crops of this character sold by farmers for consumption by animals in cities, towns, and villages, for export, or for human consumption in the United States.

Marked differences appear among the geographic divisions with respect to the relation of sales of feedable crops to purchases. In the East and West North Central divisions there was in 1909 a great excess of sales over purchases, while in the New England and Middle Atlantic divisions the sales were much less than the purchases, in the South Atlantic division considerably less, and in the East South Central division practically the same. In other words, in the northeastern divisions, and in parts of the South, the farmers do not raise enough feed for their own animals, but have to supply the deficiency by purchase from other sections of the country.

The total value of the corn, oats, barley, and hay and forage produced during 1909 was \$2,769,715,000, so that the value of such crops sold represents only 18.4 per cent of the total. Of the total quantity of corn produced, less than one-fifth was reported as sold; of oats slightly more than one-fourth; of barley about two-fifths; and of hay and forage only a little more than one-tenth. For further details see Table 13.

## EXPENDITURES FOR LABOR AND FERTILIZERS ON FARMS.

**Expenditures for labor: 1909 and 1899.**—The schedules of the Twelfth and Thirteenth Censuses contained inquiries as to the amount paid by farmers for hired labor during the year preceding the taking of the census. No attempt was made to ascertain the number of persons hired. In many cases farmers hire labor only for a few days or a few weeks during the year and it would be impossible to determine the true average number employed for the year; and the actual number employed on any selected date, even if ascertained correctly, might be by no means typical of average conditions throughout the year. The schedule inquiry as to wages distinguished between money pay-

ment and the value of house rent and board furnished. It is probable that the latter item is, in general, less correctly reported than the former, and that it is in most cases somewhat understated. The two classes of payment are combined in most of the tables.

Table 14 presents statistics regarding expenditures for labor for each geographic division and section. As an aid to interpreting the data, the distribution of the total and of the improved acreage of farm land among the divisions and sections by percentages is also shown.

The amounts paid for labor in individual states, together with other data, are shown in Table 15.

<sup>1</sup> A minus sign (—) denotes decrease.

The total amount reported as expended for farm labor (including the value of rent and board furnished) in the country as a whole in 1909 was \$651,611,000, as compared with \$357,392,000 in 1899—an increase

of 82.3 per cent. This increase is due in part to higher rates of wages, and in part to employment of additional laborers, or employment for longer periods of time.

<sup>1</sup> Includes Indian Territory.

The distribution of the payments for labor among the geographic divisions does not conform very closely to the distribution of the total acreage of farms, or of the improved acreage. In particular, the New England, Middle Atlantic, Mountain, and Pacific divisions report a larger proportion of the total expenditures for labor than of either of the other items mentioned, while the East and West South Central divisions report a much smaller proportion. These differences are probably due partly to differences in the prevailing rate of wages, but more largely to differences in the method of managing farms. Thus

in the South there is less hired labor because of the prevalence of small tenant farms.

These differences among the divisions in the extent to which farmers hire labor are further brought out by Table 16, which shows for 1909 the proportion which the farms in each division which reported expenditures for labor in 1909 form of the total number of farms and the average expenditure per farm reporting. As a guide to the interpretation of this average, the average size of all farms in each division is shown, it being impossible to state the average size of the farms which hire labor.

<sup>1</sup> Based on acreage in 1910 of all farms and not of those hiring labor.

<sup>2</sup> Less than 1 cent.

The table further shows for 1909 and 1899 the average expenditure for labor per acre of land in farms and per acre of improved land in farms, both of these averages being based on the acreage of all farms and not that of farms reporting expenditures for labor. From the figures given it appears that of the farms in the New England division 66 per cent hired labor in 1909, the average expenditure per farm reporting being \$277, while in the East South Central division, where there are many small tenant farms, only 31.6 per cent of all farms hired labor, and the average expenditure per farm was only \$107.

Table 17 distinguishes between money payment for labor and the value of house rent and board furnished.

For the United States as a whole, 80.1 per cent of the total amount expended for labor in 1909 was in the form of cash, the remainder (19.9 per cent) representing the value of rent and board furnished.

**Expenditures for fertilizers: 1909 and 1899.**—At the last two censuses the agricultural schedules contained inquiries as to the amount expended for fertilizers. These expenditures are made chiefly for commercial or artificial fertilizers, but to some extent for the purchase of manure or other natural fertilizers derived chiefly from cities, towns, and villages. Table 14 presents data regarding expenditures for fertilizers by geographic divisions and sections. Less detailed data for each state appear in Table 15.

#### THE CEREALS.

Considered as an aggregate the cereals are, both in acreage and value, the most important of the crops of the United States. In 1909 they occupied 40 per cent of all improved farm land, and contributed 48.6 per cent of the value of all crops. The acreage, production, and value of the combined cereals in 1909, with comparative figures for 1899, are given in Table 21.

Attention has already been called to the large share which the two North Central divisions have in the acreage of cereals. With upwards of 126,000,000 acres in 1909 these two divisions contained nearly two-thirds of the total cereal acreage of the country, though at the same time it should be noted that these

The total amount reported as spent for fertilizers by the farmers of the United States in 1909 was \$114,883,000, an increase of 115 per cent as compared with the expenditure in 1899.

There is a wide diversity among the sections of the country with reference to the practice of buying fertilizers. The great bulk of the expenditure reported in 1909 was in New England, the Middle Atlantic division, the states of Ohio and Indiana in the East North Central division, the South Atlantic division (which reported more than half of the total), and the East South Central division. In the other sections of the country the fertility of the soil, in so far as any attempt is made to conserve it, is usually maintained rather by rotation of crops, letting the land lie fallow, or using manure derived from live stock. Differences in the character of the soil and in the kinds of crops raised have a direct bearing on the use of commercial fertilizers. The South Atlantic division shows a higher rate of increase in expenditures for fertilizers (162.3 per cent) between 1899 and 1909 than any other. In the West North Central division, where the expenditures for fertilizers at both censuses were very low, they were considerably less in 1909 than in 1899.

The percentages and averages in Table 16 show further the differences among the geographic divisions with respect to the practice of buying fertilizers. In the country as a whole in 1909, 28.7 per cent of the farms bought fertilizers, the average expenditure per farm being \$63. In the South Atlantic division 69.2 per cent of all the farms reported some expenditure for fertilizers in 1909, the average per farm reporting being \$77, while in the West North Central division only 2.1 per cent of the farms bought fertilizers, and the average amount spent per farm was only \$41, notwithstanding the fact that the farms of this section average much larger than those in the South Atlantic division. The expenditures for fertilizers in the South Atlantic division were equal to \$1.23 for each acre of improved land in farms (based on all farms and not merely those reporting expenditures for fertilizers), while in the West North Central division the corresponding average was only \$0.01.

divisions contained slightly more than one-half of all the improved farm land. Seven states—Illinois, Kansas, Iowa, Nebraska, North Dakota, Missouri, and Minnesota—with an aggregate of 92,000,000 acres, contained nearly one-half of the total acreage in cereals in 1909.

Comparing 1909 with 1899, the figures for the United States as a whole show an increase of 3.5 per cent in the acreage of cereals and of only 1.7 per cent in production, the difference in the rate of increase being due to a slightly smaller production per acre. During the decade the population increased 21 per cent, while the per capita production of cereals, which in 1899 was 58.4 bushels, was in 1909 only 49.1 bushels. With a

production only slightly larger, the value of the cereal crop in 1909 exceeded that in 1899 by \$1,183,000,000, or 79.8 per cent.

The slight gain which has been noted in the cereal acreage was far from being evenly distributed throughout the country. Indeed, all divisions east of the Mississippi River lost in acreage, the aggregate loss being over 6,000,000 acres. West of the Mississippi River, on the other hand, all divisions except the Pacific increased their acreage, with a net gain of over 12,000,000 acres. Twenty-seven states had a smaller acreage of cereals in 1909 than in 1899. Of the seven leading states mentioned above, North Dakota increased its acreage enormously during the decade, Kansas made a considerable, and Nebraska a slight gain, but in Illinois, Iowa, Minnesota, and Missouri decreases occurred.

The distribution of production throughout the several divisions and the increase or decrease from one year to another follow the conditions observed in regard to acreage approximately, but not exactly, since variations in the average yield in different sections make some changes in the proportions. For the United States as a whole the production was practically the same in 1909 as in 1899, with an increase of only 1.7 per cent in the later year as compared with the earlier.

Twenty-one states reported a smaller production in 1909 than in 1899. Of the seven leading states, North Dakota shows an increase in production even greater relatively than that in acreage, and Minnesota shows a slight increase in production, in spite of a decrease in acreage, while Illinois, Kansas, Iowa, Nebraska, and Missouri show a decrease in production, though Kansas and Nebraska gained in acreage.

Table 21 shows that the remarkable increase in the value of the cereal crop disclosed by the census generally was shared by all divisions. In only one state, California, was there any decrease in the value of the cereal production in 1909 as compared with 1899. Elsewhere the general advance in values more than offset such losses as occurred in production.

While the cereals will later be discussed individually, it is of interest to consider here the relative importance of the different crops. This is shown in Table 18, which gives for the United States and for each geographic division and section the percentage of the aggregate cereal acreage which was occupied by each crop in 1909.

In the United States as a whole a little more than one-half of the acreage devoted to cereals is in corn, a little less than one-fourth in wheat, and somewhat more than one-sixth in oats. In each of the nine divisions except the Pacific the three leading cereals—corn, wheat, and oats—occupy, as in the United States at large, much more than three-fourths of the total cereal acreage. In the Pacific states the acreage of corn is insignificant and that of barley exceeds that

of oats. Corn occupies the leading place in the important cereal producing regions, but in the New England and Middle Atlantic divisions the first place is held by oats, and in the Pacific and Mountain divisions by wheat. The cereals included under the head of "all other" in the final column of the table are emmer and spelt, kafir corn, and rice. The share of these in the aggregate acreage in most divisions is slight, but in the West South Central division kafir corn occupies 5.7 per cent and rice 3 per cent of the total cereal acreage.

West of the Mississippi.....	100.0	45.8	28.5	16.9	5.8	0.5	(1)	2.5

<sup>1</sup> Less than one-tenth of 1 per cent.

In the South corn occupies over three-fourths of the total cereal acreage, but in the North the proportion is less than one-half. In both of these sections wheat is second in importance, with oats a close third. In the West, however, wheat occupies one-half the cereal acreage, and oats and barley each about one-fifth, while the acreage of corn is insignificant.

Table 19 shows the distribution of the total acreage of each particular crop among the different geographic divisions and sections.

<sup>1</sup> Less than one-tenth of 1 per cent.

This distribution reflects in part the size of the different divisions and sections of the country, or, rather, the amount of improved land in them. Hence for the three leading cereals, corn, oats, and wheat, the largest proportion of the acreage is found in the West North

# FARM CROPS, BY STATES.

377

ALL CEREALS—ACREAGE, PRODUCTION, AND VALUE, BY DIVISIONS AND STATES: 1909 AND 1899.

[A minus sign (—) denotes decrease.]

1 Includes Indian Territory.

**Corn.**—For the United States as a whole the area of corn harvested increased from 94,914,000 acres in 1899 to 98,383,000 in 1909, or 3.7 per cent, but the production decreased from 2,666,000,000 bushels to 2,552,000,000 bushels, or 4.3 per cent. The total value of the crop of 1909, however, was \$1,439,000,000, as compared with \$828,000,000 in 1899, an increase of \$610,000,000, or 73.7 per cent. Corn in 1909 occupied 20.6 per cent of the improved farm land of the country and contributed 26.2 per cent of the total value of crops. The statistics are presented by divisions and states, in Table 23.

Table 22 gives, for the nine geographic divisions and for the five leading producing states, percentages and averages derived mainly from Table 23.

The percentage of the acreage in each geographic division has already been discussed. The leading states in acreage of corn are Illinois, Iowa, Kansas, Nebraska, and Missouri, in the order named. Each of these states had more than 7,000,000 acres in corn in 1909, their aggregate acreage being nearly 42,000,000, or over two-fifths of the total corn acreage of the United States. The distribution of the corn acreage of 1909 among the states is shown by the map on page 384.

In the United States as a whole corn occupies about one-fifth of the improved land in farms, this proportion being exceeded in each of the five principal agricultural divisions. In the five states mentioned above corn occupies more than one-fourth of the improved land in farms, while in Illinois it occupies more than one-third and in Iowa almost one-third.

Table 23 shows that by far the most extensive change in the acreage of corn during the decade from 1899 to 1909 was in the West South Central division, where the area harvested increased 3,731,000 acres, or 33.4 per cent, almost all of this increase taking place in the single state of Oklahoma. It may be noted also that the gain in this state is equivalent to 98.4 per cent of the entire net increase in the total corn acreage of the United States. For the Mountain division a very high percentage of increase is recorded, though the acreage is still small. A marked relative decrease is shown for the New England and Middle Atlantic divisions, but

in neither is the production of corn very important. Among the leading corn states, there were increased acreages in Minnesota, North Dakota, and South Dakota, and decreased acreages in Iowa and Missouri.

The average yield for the United States was 25.9 bushels per acre in 1909 and 28.1 bushels in 1899. Among the geographic divisions which have a considerable acreage in corn, the highest yield in 1909 was in the East North Central division and the lowest in the West South Central division. In the West North Central and West South Central divisions, which contain about one-half of the total corn acreage, the average yield in 1909 was conspicuously lower than in 1899. In the other divisions the average per acre changed but little. Among the principal corn states, Kansas showed a very conspicuous falling off in average yield, and of the five states named in the table, Illinois was the only one in which the yield did not decrease. By reason of these differences in average yield per acre, the changes in the total production of the various divisions and states do not correspond very closely with the changes in acreage. Two divisions with increased acreages report a smaller production in 1909 than in 1899, and two with reduced acreages report a greater production. In each of the five states which lead in acreage both the acreage and the production decreased during the decade, but in Kansas and Nebraska the decrease in production was much more pronounced than that in acreage.

The average value of corn per bushel in 1909 was \$0.56, as compared with \$0.31 in 1899. The divisions from which the highest average values are reported are, with the exception of the South Atlantic and East South Central divisions, those having a comparatively small acreage in corn. With the great advance in average value per bushel, there was a corresponding advance in the average value per acre, though by reason of a decreased yield per acre the percentage of increase was not so great. For the crop as a whole, however, the advance in the average value per bushel, despite a diminished production, resulted in an enormous increase in aggregate value, in which every state except Vermont shared.

The per capita production of corn in 1909 was 27.7 bushels, as compared with 35.1 bushels in 1899. The decreased production per capita, with the accompanying increase in price, has resulted in a great falling off in exports. For the year ending June 30, 1900, exports amounted to 213,123,000 bushels, equal to 8 per cent of the crop of 1899, while for the year ending June 30, 1910, they amounted to only 38,128,000 bushels, or 1.5 per cent of the crop of 1909. With the exception of the year 1908, this is the smallest proportion of the corn crop exported in any year since 1870. Of the 1899 crop the amount remaining for home use was 2,453,000,000 bushels, while of the 1909 crop it was 2,514,000,000 bushels—the amount retained in 1909 being the greater by 61,000,000 bushels. Thus in 1899, 32.3 bushels per capita remained for home use, and in 1909, 27.3 bushels.

## CORN—ACREAGE, PRODUCTION, AND VALUE, BY DIVISIONS AND STATES: 1909 AND 1899.

[A minus sign (—) denotes decrease.]

1 Includes Indian Territory.

**Wheat.**—For the United States as a whole the area harvested in 1909 was 44,263,000 acres, as compared with 52,589,000 acres in 1899, a decrease of 15.8 per cent. On the other hand, the production in 1909 was 683,000,000 bushels, or 3.8 per cent greater than in 1899, when it was 659,000,000 bushels. The value of the crop of 1909 was \$658,000,000, an advance of \$288,000,000, or 77.8 per cent, over the value in 1899, \$370,000,000. Wheat in 1909 occupied 9.3 per cent of the total improved farm land, and its value represented 12 per cent of the total for all crops. Details in regard to the production of wheat in 1909 and 1899 are given in Table 25, while a summary of averages and percentages, derived mainly from this table, is given in Table 24.

Table 24

\* Less than one-tenth of 1 per cent.

Considerably more than one-half of the acreage in wheat in 1909 was found in the West North Central division. The East North Central division, which reported the next largest acreage, contained 15.9 per cent of the total, and the Pacific, which is third in rank, 7.6 per cent. The map on page 384 shows the distribution of the wheat acreage among the states.

Wheat occupies in the United States as a whole nearly 10 per cent of the improved land in farms, but in the West North Central and Pacific divisions the proportion exceeds 15 per cent. The proportion is insignificant in the New England division and is smaller in the southern than in the other northern divisions.

The leading state in wheat production is North Dakota, with an acreage exceeding 8,000,000 and greater than that of any geographic division except the West North Central, in which the state is situated. Kansas, with nearly 6,000,000 acres of wheat, and Minnesota and South Dakota, with over 3,000,000, follow. The four states named have nearly 21,000,000 acres in wheat, or over two-fifths of the wheat acreage of the United States.

Between 1899 and 1909 there was a gain of 778,000 acres, or 3.1 per cent, in the West North Central division and a gain about half as large in the Mountain division. In all other divisions the acreage decreased, the greatest absolute loss being that of over 3,000,000 acres in the East North Central division. Of the 48 states reporting wheat, 37 show a loss in acreage.

Among the four leading states already mentioned, North Dakota and Kansas show conspicuous gains in acreage, but South Dakota and Minnesota show decreases, the acreage in the latter having fallen off one-half.

The average yield of wheat in 1909 was 15.4 bushels per acre. Of the divisions with a large acreage, the West North Central had a slightly lower and the East North Central and Pacific a slightly higher yield per acre than the average for the United States. The three southern divisions fell considerably below that average. As compared with the yield of 12.5 bushels per acre in 1899, that of 1909 was considerably larger. With the exception of the West South Central division, larger yields were reported in all the divisions in 1909 than in 1899, and the same was true of each of the four leading wheat states listed in the table.

In the country as a whole the increased yield per acre was sufficient to counterbalance the decrease in acreage. In the West North Central and Mountain divisions, which gained in acreage, there was a still greater gain in production. In the other divisions, except the West South Central, the loss in production was not so great as in acreage. In the states of North Dakota and Kansas, the percentage of increase in production was greater than that in acreage. In South Dakota the increased yield per acre caused an increase in production, although the acreage was smaller, and in Minnesota the loss in production was less pronounced than that in acreage.

The average value of wheat per bushel in 1909 was \$0.96, but three divisions only, the West North Central, Mountain, and Pacific, reported an average value of less than \$1. This represents an enormous increase over the value in 1899, when the average for the United States was \$0.56 per bushel. The average value of the wheat crop per acre more than doubled between 1899 and 1909. In each division, except the New England, East South Central, and West South Central divisions, the increase in average value per bushel more than offset the loss in production and the total crop had a greater aggregate value in 1909 than in 1899. It may, however, be noted that 20 states show a falling off in the value of the wheat crop, the most notable decreases being in California, Texas, and Iowa.

In 1899 the per capita production of wheat was 8.7 bushels and in 1909, 7.4 bushels. This falling off in production per capita was counterbalanced largely by a decrease in the amount exported. Wheat imports are insignificant and may be disregarded. In the year ending June 30, 1900, there was exported in the form of wheat and flour the equivalent of 186,097,000 bushels, or 28.3 per cent of the crop of 1899. Ten years later the exports were only 87,364,000 bushels, or 12.8 per cent of the crop of 1909. For home consumption there remained of the crop of 1899, 472,437,000 bushels, or 6.2 bushels per capita, as compared with 596,015,000 bushels, or 6.5 bushels per capita, retained of the crop of 1909.

# FARM CROPS, BY STATES.

1 Per cent not calculated where base is less than 100.

\* Includes Indian Territory.

**Oats.**—The acreage of oats harvested in the United States increased from 29,540,000 in 1899 to 35,159,000 in 1909, or 19 per cent, while the production increased 6.8 per cent, from 943,000,000 bushels in 1899 to 1,007,000,000 bushels in 1909. The value of the crop, however, which was \$217,000,000 in 1899, was \$415,000,000 in 1909, or 91 per cent greater. The acreage of oats in 1909 was 7.3 per cent of the total improved farm acreage, and their value 7.6 per cent of the total for all crops. Detailed figures concerning the production of oats in 1909 and 1899 are given in Table 27, and a summary of the averages and percentages for the geographic divisions and leading states, derived mainly from this table, is presented in Table 26. The map on page 385 shows how the acreage of oats is distributed among the states.

Of the total acreage of oats, 44.7 per cent was reported from the West North Central division and 31.9 per cent from the East North Central. In the latter, oats occupy about one-eighth, in the former somewhat less than one-tenth, of the improved land in farms. They are also a crop of some importance in the Middle Atlantic division, in which they occupy about one-twelfth of the improved land in farms.

The leading state in the acreage of oats in 1909 was Iowa, with 4,655,000 acres, closely followed by Illinois, with 4,176,000. Minnesota, Nebraska, Wisconsin, and North Dakota, ranking in the order named, also had each more than 2,000,000 acres in oats. These six leading states had together over 18,000,000 acres of oats in 1909, or more than one-half of the acreage for the whole country.

Comparing 1909 with 1899, the Middle Atlantic and West South Central divisions show an aggregate loss of 257,000 acres, but an aggregate gain of 5,876,000 acres was reported for the remaining divisions, or a net gain of 5,620,000, or 19 per cent, for the whole country. The greatest absolute gain—over 3,600,000 acres—was in the West North Central division, but larger relative increases occurred in the Mountain and Pacific divisions. Among the states, North Dakota shows an increase of over 1,300,000 acres. A gain of

more than 500,000 acres each is also reported for South Dakota, Minnesota, Ohio, and Indiana. Of the six states named above as leading in the acreage of oats, three—Iowa, Illinois, and Wisconsin—show decreases for the decade, while increases took place in the remainder.

The average yield in 1909 of 28.6 bushels per acre for the country as a whole was exceeded in the East North Central division, but was not attained by the West North Central division, nor by the Middle Atlantic division. Of the divisions where the acreage of oats is less important, the New England, Mountain, and Pacific divisions exceeded this average, while the remainder fell below it. For the United States as a whole the average yield per acre in 1909 was somewhat below that of 1899. This was true also of the three divisions with the largest acreage and of the New England and West South Central divisions, but in the other divisions the average yield in 1909 was greater than in 1899.

There was in the United States as a whole a somewhat larger crop of oats in 1909 than in 1899. Two divisions which lost in acreage had also a smaller production, while two others showed a diminished production in combination with an increase in acreage. Among the remaining divisions, the rate of increase in production was considerably less than that in acreage in the West North Central division, which produced over two-fifths of the entire crop, but in the divisions with a smaller production the crop increased more rapidly than the acreage. Among the several states, the largest gain in the production of oats was in North Dakota, where the crop of 1909 was nearly three times as great as that of 1899. A considerable gain was also made in Minnesota, but in the other states which have been noted as leading in acreage there was a diminished production, especially in Iowa, the first on the list as measured by acreage.

The average value per bushel of the oat crop was \$0.41 in 1909, as compared with \$0.23 in 1899, an advance of 78.3 per cent. As is frequently the case, the average values are somewhat higher in the divisions with relatively small production than in those with large production. All divisions, however, show a marked advance for 1909 as compared with 1899. By reason of the smaller yield per acre the value of the crop per acre did not increase in the same proportion as the average value per bushel. As a result of the increased acreage in the country as a whole, however, there was an increase in the aggregate value of the crop, amounting to 91 per cent. This increase is shared by all divisions, though, as already noted, some show a decrease in acreage and some a decrease in production. The effect of the change in value is particularly noticeable in the case of the state of Iowa, which leads in the acreage of oats. In the 10 years the acreage in that state remained practically stationary, the production fell off nearly one-fourth, but the value of the crop increased nearly one-half.

# FARM CROPS, BY STATES.

ACREAGE, BY STATES: 1909.

**Minor cereals.**—The minor cereals occupy only 7.1 per cent of the entire acreage devoted to cereals in the United States. Statistics are given for each in Tables 28 to 33.

**Barley.**—Of the minor cereals, barley (Table 28), which occupies 4 per cent of the entire cereal acreage of the United States, is by far the most important. Of the aggregate barley acreage of 7,698,706, considerably more than one-half was found in the West North Central division. Other divisions where this is an important crop are the Pacific and the East North Central, the three divisions named containing together 94.1 per cent of the total acreage in 1909. Four states, Minnesota, North Dakota, California, and South Dakota, ranking in the order named, have an acreage in excess of 1,000,000 each, and together contain more than two-thirds of the total for the whole country. Large acreages are also reported for Wisconsin and Iowa.

The acreage in barley was larger in 1909 than in 1899 by 3,228,510 acres, or 72.2 per cent. Almost three-fourths of this increase was reported from the West North Central division, where the acreage more than doubled during the period. The percentage of increase in the Mountain division was greater than in any other. Only in divisions of small acreage was there a decrease. In the three divisions which led in acreage there was an increase in the acreage of every state except Ohio and Iowa.

The crop of 1909, 173,000,000 bushels, exceeded that of 1899, 120,000,000 bushels, by 44.9 per cent, the average yield per acre being 22.5 bushels in 1909 and 26.8 bushels in 1899. The increase in production in 1909 over 1899 for the country as a whole was therefore somewhat less relatively than the increase in acreage. The same statement is true for each of the divisions which are prominent in the production of barley, but in some of the less important divisions the increase in production was greater than that in acreage. Divisions with a decreased acreage had also a decreased production. In the three divisions which led in production all the states, with the exception of Ohio, Iowa, Indiana, and Nebraska, show increases in production.

The value of the crop in 1909, \$92,459,000 (equal to 1.7 per cent of the total value of crops) was more than twice as great as in 1899, the average value per bushel increasing from 35 to 53 cents, or 51.4 per cent, and the average value per acre from \$9.31 to \$12.01, or 29 per cent. In the New England, Middle Atlantic, and West South Central divisions there was a decrease in total value, but it was considerably less relatively than that in either acreage or production.

**Rye.**—Judged by acreage, rye (Table 29) is somewhat less than one-third as important as barley. Of the 2,195,561 acres in rye in the United States in 1909

about three-fourths were located east of the Mississippi River. The leading division in acreage is the East North Central, the Middle Atlantic ranking next. There is, however, almost no difference in the acreage of the West North Central and the Middle Atlantic divisions. The leading states in the acreage of rye are Michigan, Wisconsin, Pennsylvania, and Minnesota, in the order named. Together these four states reported in 1909 nearly 1,300,000 acres, or more than one-half of the area devoted to rye in the United States.

The increase in the acreage of rye in 1909 as compared with 1899 amounted to 6.9 per cent. Five divisions, including two with a considerable acreage of this crop—the Middle Atlantic and the West North Central—show decreases, while increases occurred in four divisions. The gain was conspicuous in the principal rye producing section, the East North Central, where it amounted to 43.2 per cent. A much larger percentage of increase is shown for the Mountain division, but the absolute gain in acreage was less than one-tenth as large. Of the four leading states, Michigan and Minnesota more than doubled their rye acreage, but Wisconsin and Pennsylvania both show a decrease.

The production in 1909, 29,520,000 bushels, was 15.5 per cent greater than in 1899, indicating, in connection with the increase of only 6.9 per cent in acreage, a greater yield per acre for the crop as a whole (13.4 bushels in 1909 and 12.4 in 1899). The divisions which lost in acreage had also, with the exception of the West North Central division, a smaller production.

The value of the rye crop in 1909, \$20,422,000, represented 0.4 per cent of the total value of crops. It was nearly two-thirds greater than in 1899. While five divisions had a diminished acreage and four a decreased production, there were only two in which the value of the crop was smaller in 1909 than in 1899. The average value per bushel increased from 48 to 69 cents, and the average value per acre from \$5.98 to \$9.30.

**Buckwheat.**—Buckwheat (Table 30) has a much smaller area of cultivation than the cereals thus far considered. There were 878,000 acres harvested in the United States in 1909, of which the region east of the Mississippi contained 96.9 per cent. The Middle Atlantic states had about two-thirds of the total acreage reported for buckwheat, this being almost equally divided between New York and Pennsylvania. The increase in the area harvested in 1909 as compared with 1899 was over 70,000 acres, more than one-half of which was in the Middle Atlantic division. The New England and West North Central divisions lost in acreage but all others gained, the most significant increase being that in the South Atlantic division, amounting to 29,322 acres, or 52.8 per cent. Pennsylvania shows an increase of 17.2 per cent in the acreage of buckwheat and New York a decrease of 1.2 per cent.

The production of 1909 amounted to 14,849,000 bushels, which was 32.2 per cent more than that of 1899. The increase in production was relatively greater than that in acreage, and New England was the only division reporting a smaller production in 1909 than in 1899. Measured by production, New York appears as the leading state, showing a gain of 49.2 per cent in this respect, despite a slight loss in acreage.

The crop of 1909, valued at \$9,331,000, was nearly two-thirds greater in value than that of 1899. In 1909 the average yield per acre was 16.9 bushels; the average value per bushel, 63 cents; and the average value per acre, \$10.63.

*Emmer and spelt.*—Emmer and spelt (Table 31) are old grains known to the ancient world and still in use as a food crop in parts of Europe and Asia. Nearly all the "emmer and spelt" reported is emmer, spelt being cultivated in only a few scattered localities. These grains are, botanically, species of wheat, but commercially they are more closely related to the other cereals, since they are used as food for stock. Moreover, the price per bushel of emmer and spelt corresponds much more nearly to that of corn or oats than to that of wheat. No regular statistics of these crops were gathered in 1900.

Emmer and spelt are considered good crops for dry farming, and like kafir corn have been introduced principally in the districts of comparatively light rainfall, though on account of the heavy yield and the value of the grains as feed for stock, they are sown in parts of the grain region in which corn is not an established crop.

The area of emmer and spelt harvested in 1909 was 573,622 acres, the production 12,703,000 bushels, and the value \$5,584,000. The average production per acre was thus 22.1 bushels; the average value per bushel, 44 cents; and the average value per acre, \$9.73.

Of the total acreage, the West North Central division reported 522,487 acres, or 91.1 per cent; the Mountain, 18,644; the East North Central, 14,941; and the West South Central, 13,295. Of the total production in 1909, 11,673,000 bushels, or 91.9 per cent, were reported from the West North Central division; 407,000 bushels from the Mountain division; and 372,000 bushels from the East North Central division.

The state having the largest acreage in 1909 was South Dakota, with 259,611 acres, or 45.3 per cent of the total area harvested, while North Dakota came next with 101,144 acres, or 17.6 per cent of the total—the combined acreage for the two Dakotas representing over three-fifths of the total area in this crop. The states ranking next in acreage were Nebraska, Kansas, Minnesota, and Colorado.

*Kafir corn and milo maize.*—Statistics for kafir corn and milo maize (Table 32) were first obtained by the

Census Bureau in 1900. The acreage in 1899 was about one-third as great as that of buckwheat, but in 1909 it was almost twice as large. Kafir corn and milo maize are cereals belonging to the millet family. They are grown extensively in Africa and somewhat in Asia, the grain being used for food. In this country they have made great headway as dry-farming crops and are being introduced more generally in sections of light rainfall. The grains are here used primarily for feeding live stock, although to a limited extent they are ground for flour. Aside from the use made of the grain, the stalks, if cut before they are entirely ripe, make a valuable fodder.

Of the 1,635,153 acres in kafir corn and milo maize in 1909, over 1,000,000 acres were in the two states of Texas and Oklahoma and nearly 400,000 acres in Kansas. The only other considerable acreages were in New Mexico and California.

The acreage harvested was more than six times as great in 1909 as in 1899. In 1899 over one-half the crop was harvested in the state of Kansas, but the recent extension of the cultivation of these cereals in Texas and Oklahoma has placed those states at the head of the list.

The production increased from 5,169,000 bushels in 1899 to 17,597,000 bushels in 1909. The rate of increase was only half as rapid as that in acreage, the yield per acre, which was 19.4 bushels in 1899, being only 10.8 bushels in 1909. The decrease in yield per acre is due mainly to the fact that the crops are becoming popular in regions of comparatively light rainfall where the yield is normally small. In 1909 the average value per bushel was 61 cents and the average value per acre \$6.62.

*Rice.*—The area devoted to the cultivation of rice (Table 33) in 1909 was 610,175 acres, located almost exclusively in the West South Central division. Louisiana, with 317,518 acres, and Texas, with 237,586 acres, far exceed any other state or any other division in acreage. A small acreage only is reported for the East South Central division, and 27,080 acres for the South Atlantic division.

During the decade the area devoted to rice cultivation increased 267,961 acres, or 78.3 per cent. There was a great loss in acreage in the South Atlantic division, but this was much more than counterbalanced by the great gain in the West South Central division, the principal rice producing area.

The production of rough rice in 1909 was 21,839,000 bushels, and the value \$16,020,000. The increase in both production and value between 1899 and 1909 was more rapid than that in acreage, and shows about the same distribution as respects the two producing areas, the South Atlantic and the West South Central divisions.

1 Includes 12 acres, 60 bushels, valued at \$40, in states not shown.

2 Per cent not calculated where base is less than 100.

## OTHER GRAINS AND SEEDS.

According to ordinary usage, the term "grain" refers to the several cereals only, but it is sometimes applied to other seeds also, such as beans and peas and peanuts. The more comprehensive definition conforms to the usage of the Department of Agriculture, which has been adopted by the Census Bureau. Among the other seeds are included flaxseed, grass seed, flower and vegetable seeds, etc. The combined value of the production of the minor grains and seeds, of which the most important are beans, peas, peanuts, flaxseed, grass seed, and flower and vegetable seeds, amounted in 1909 to \$97,536,000, representing 1.8 per cent of the total value of all crops, including forest and nursery products. The statistics of acreage were not tabulated for grass seeds, or flower and vegetable seeds, chiefly for the reason that in many cases the raising of these seeds was incidental to the production of hay and forage crops and of flowers and vegetables, so that a presentation of the acreage would involve duplication. The total acreage of the minor grains and seeds for which acreage reports were secured amounted in 1909 to 5,157,000, or 1.1 per cent of the improved farm land of the country.

**Dry edible beans.**—Table 34 shows the statistics for dry edible beans. It does not include beans used green from vegetable gardens nor varieties of beans which are used mainly for feeding animals, such as horse beans, stock beans, and velvet beans, nor castor beans (the total acreage of which is very small). Beans used green from gardens are included with vegetables.

The acreage of dry edible beans in 1909 was 802,991, forming only 0.2 per cent of the total improved farm acreage of the country. The acreage in 1909 was 76.9 per cent greater than in 1899, and the production, which amounted to 11,251,000 bushels in 1909, was considerably more than twice as great. The value of the product increased from \$7,634,000 in 1899 to \$21,771,000 in 1909, or 185.2 per cent, the average value per bushel having advanced from \$1.51 to \$1.94. The value of the crop raised in 1909 represented 0.4 per cent of that of all crops. The East North Central division contained more than half of the total acreage of dry edible beans in the country in 1909. Other divisions with large acreages were the Pacific and Middle Atlantic, but in the latter the acreage was less in 1909 than in 1899.

The total acreage of the various other kinds of beans (not reported as dry edible beans or as beans used green from gardens) was 14,947 in 1909, as compared with 25,738 in 1899; the production was 179,733 bushels in 1909 and 143,388 in 1899; and the value \$241,060 in 1909, as compared with \$134,084 in 1899.

<sup>1</sup> A considerable amount of this acreage is probably a duplication of other crop acreage.

<sup>2</sup> Includes Indian Territory.

**Dry peas.**—Table 35 presents statistics for dry peas; it does not cover green peas, which are included under "vegetables."

In 1909 the acreage of dry peas in the United States as a whole was 1,305,099, equivalent to 0.3 per cent of the total improved farm acreage of the country. Although the acreage reported in 1909 was 34.8 per cent greater than in 1899, the production (7,129,000 bushels) showed a decrease of 24.5 per cent. On ac-

count of the material increase in the average value per bushel, however, the total value of the crop advanced from \$7,909,000 in 1899 to \$10,964,000 in 1909, when it constituted 0.2 per cent of the total value of all farm crops.

<sup>1</sup> A considerable amount of this acreage is probably a duplication of other crop acreage.

<sup>2</sup> Includes Indian Territory.

The leading division with respect to acreage of dry peas is the South Atlantic, which in 1909 reported more than half of the total, but the production in this division was less in 1909 than that in the East North Central division, which ranked second in acreage. The marked increase reported in the acreage devoted to this crop in the South Atlantic division is probably

more apparent than real, inasmuch as peas are often planted in conjunction with some other crop, and it seems certain that for 1909 the enumerators more frequently duplicated such acreage in their reports than they did for 1899. The East South Central and West South Central divisions ranked third and fourth, respectively, in acreage and production in 1909.

**Peanuts.**—Table 36 shows that the production of peanuts is practically confined to the southern states.

All other states.....	413	207	7,876	3,893	9,152	4,032

<sup>1</sup> Includes Indian Territory.

The acreage of peanuts in 1909 was 869,887, representing 0.2 per cent of the total improved farm acreage in the country as a whole. In the South the proportion of the improved farm acreage that was devoted to peanuts was 0.6 per cent. The total acreage of peanuts in the United States in 1909 was 68.4 per cent greater than in 1899, and the production in 1909, 19,416,000 bushels, was 62.3 per cent greater than 10 years before.

The value of the crop in 1909, \$18,272,000, which formed 0.3 per cent of the total value of all crops, was more than two and one-half times as great as that in 1899. The average value per bushel increased from \$0.61 to \$0.94. The leading states in the production of peanuts are North Carolina, Georgia, Virginia, Florida, and Alabama, in the order named, the acreage in each of these states in 1909 exceeding 100,000. Other states in which there has been a very marked increase in the acreage of peanuts are Louisiana, Mississippi, and Texas.

**Flaxseed.**—In the United States flax is raised primarily for the sake of the seed, much less use being made of the fiber than in some of the other countries where this crop is grown. The production of flaxseed, as shown by Table 37, is almost wholly confined to the North Central and Mountain divisions.

The total acreage in flax in 1909 was 2,083,142, or 0.4 per cent of the total improved farm acreage of the country, and the total production was 19,513,000 bushels. Both acreage and production in 1909 were

slightly less than in 1899, but the value increased from \$10,625,000 in 1899 to \$18,971,000 in 1909, or 47.5 per cent, the average value per bushel increasing from \$1.68 to \$1.48. In 1909 the value of this crop represented 0.5 per cent of the total for all crops. The values given in the table represent the seed only. The Census Bureau did not undertake to ascertain the total value of flax straw produced, but an inquiry was made as to the amount received from sales of flax straw and flax fiber, an item which probably represents approximately the value of the straw produced, since it is used but little on the farm. The reported receipts from sales of flax straw and fiber in 1909 amounted to \$90,832.

#### FLAXSEED—ACREAGE, PRODUCTION, AND VALUE

Indian Territory	1,897	1,210	1,897	1,210	2,800	1,800

\* Includes Indian Territory.

The acreage of flax in North Dakota in 1909 was more than half of the total for the country. South Dakota ranked next and Minnesota third, while no other state had as much as 30,000 acres. Between 1899 and 1909 there was a marked falling off in the acreage of flax in Idaho, Iowa, Kansas, Minnesota, and Missouri, but a marked increase in North Dakota and South Dakota, and in Montana, where the crop, which was insignificant in 1899, had become of considerable importance in 1909.

Grass seed and flower and vegetable seeds.—Table 38 presents statistics of grass seed and flower and vegetable seeds, by states.

As already stated, the acreage from which grass seed and flower and vegetable seeds were raised has not been tabulated. In some cases such acreage was not reported, and in many other cases it would represent a duplication of the acreage reported for hay and forage, flowers and plants, and vegetables. The reported production of flower and vegetable seeds doubtless represents chiefly that of farms producing such seeds for sale, small quantities raised by farmers for their own use presumably being often, if not generally,

omitted. Since statements of quantity for all classes of flower and vegetable seeds combined would obviously have no significance, only the total value of these seeds is shown in Table 38. For the country as a whole the value in 1909 was \$1,411,000. The most important states in the production of such seeds in 1909 were California, Illinois, New York, and Ohio.

\* Includes Indian Territory.

Table 39 shows, by geographic divisions, for 1909 and 1899, the total quantity and value of grass seed produced, and also, for 1909, the production and value of the leading classes. The acreage of grass seed is not shown, for the reason that in most cases it would involve duplication of the acreage reported for the grasses themselves under hay and forage crops.

The total value of the grass seed produced in 1909 was \$13,138,000, which constitutes 0.3 per cent of the

total value of farm crops and represents an increase of 84 per cent over the value in 1899. Much the larger part of the production of grass seed, considered as a group, was reported from the West and East North Central divisions. As measured by value, clover seed

is the most important kind of grass seed, followed by timothy and alfalfa. The East North Central division leads in the production of clover seed, the West North Central in that of timothy seed and millet seed, and the Mountain in that of alfalfa seed.

Minor seeds.—Table 40 shows, for 1909, the acreage, quantity, and value of the minor seeds produced in the United States as a whole and in the states which lead in the production of each kind. Mustard seed is used mainly as a condiment and sunflower seed probably largely for poultry feed, but the other classes of seeds are for the most part raised for the purpose of planting.

It is probable that the quantities reported do not represent the entire production of these classes of seeds, as they were not listed by name in the census schedule. The combined acreage of all these classes of seeds in 1909 was only 81,308, and the total value \$769,000. Of the total acreage reported, 72,497 were devoted to sorghum cane seed. The quantity produced was reported to be 833,707 bushels, valued at \$544,322. Kansas, Nebraska, Texas, and Oklahoma lead in production.

It is believed that in most cases the acreage shown in this table for seeds is separate from and additional to the acreage of the corresponding products, and therefore does not involve duplication.

<sup>2</sup> Less than 1 acre.

<sup>3</sup> Includes golden seal seed and anise seed.

## HAY AND FORAGE.

The acreage devoted to hay and forage (Table 42) in 1909 was 72,281,000 and in 1899 was 61,691,000, representing an increase of 17.2 per cent. During the same period the production increased from 79,252,000 tons in 1899 to 97,454,000 in 1909, or 23 per cent, while the value of the crop reported in 1909 was \$824,000,000, or 70.2 per cent greater than that reported in 1899, \$484,000,000. In 1909 hay and forage occupied 15.1 per cent of all improved farm land and contributed 15 per cent of the total value of all crops. A map on page 385 shows the distribution of the hay and forage acreage among the states.

The hay and forage acreage in 1909 was equal to 37.8 per cent of that devoted to all cereals and 73.5 per cent of that occupied by corn alone, but was much larger than that of any of the other cereals. It was equivalent to 15.1 per cent of the improved farm land of the country, but it may be noted that, particularly in the regions west of the Mississippi River, considerable hay is harvested on land which has never been under the plow and which is probably mostly reported as unimproved land. Of the hay and forage acreage reported in 1900 over one-third was in the West North Central division. This division has an acreage nearly twice as great as the East North Central, which ranks second, and over three times as great as the Middle Atlantic, which ranks third. Among the states with a large acreage Iowa and New York are almost equally important, each having in excess of 5,000,000 acres. One other state, Nebraska, has over 4,000,000 acres, eight other states over 3,000,000 acres, four more over 2,000,000 acres, and seven have between 1,000,000 and 2,000,000 acres. The crop is thus more widely distributed than any cereal crop.

Table 41 gives the share of each geographic division and of the more important states in the hay and forage acreage, and the percentage which the acreage of this crop forms of the total improved land in farms in each division and state, together with the average yield per acre and the average value per ton and per acre.

Each of the 11 states here listed had at least 4 per cent of the total hay and forage acreage in the United States for 1909, and together they contained 58.9 per cent of this total. In only 3 of these states, Illinois, Missouri, and Kansas, does the proportion of improved land in farms which is devoted to hay and forage fall below the average for the United States. In New York the acreage of hay and forage is equal to about one-third of the improved land in farms, in Wisconsin and Pennsylvania to practically one-fourth, and in South Dakota and Minnesota to about one-fifth.

During the decade the New England and Middle Atlantic divisions lost slightly in acreage, but in the other divisions the gains, both absolute and relative, were for the most part considerable. In the two

divisions which lost in acreage there was a decrease in all the states except Vermont. In those divisions which had a greater acreage in 1909 than in 1899 the only states which did not share in the increase were Indiana and Kansas.

DIVISION OR STATE.	ACREAGE: 1909		AVERAGE YIELD IN TONS PER ACRE.		AVERAGE VALUE PER TON.		AVERAGE VALUE PER ACRE.

The average yield of hay and forage per acre in the United States in 1909 was 1.35 tons. This average was exceeded considerably in the Mountain and Pacific divisions, but of the more easterly divisions only the East North Central showed a yield larger than the average. The average yield per acre in the country as a whole was slightly greater in 1909 than in 1899. In one division only, the West South Central, was the yield appreciably smaller in 1909, though in three, the West North Central, East South Central, and South Atlantic, it was the same or practically the same in the two years. In only two of the states named in the table, Kansas and Missouri, was the yield per acre smaller in 1909 than 10 years earlier.

As the result of the increases in acreage or in yield per acre there was, in every division except the West South Central, an increase in the total yield. In that division the falling off in average yield more than balanced the effect of the increased acreage. In the New England and the Middle Atlantic divisions larger crops were harvested in 1909 than in 1899, in spite of a decrease in acreage. In the East North Central, Mountain, and Pacific divisions the percentages of increase in production were greater than those in acreage. In the West North Central division, where the largest crop was harvested, and in the East South Central and South Atlantic divisions the relative gain in production follows closely that in acreage. The unfavorable conditions in the Southwest are reflected by a decreased production in Oklahoma and Texas, where the acreage increased. In Kansas there was a relative decrease in production greater than that in acreage.

<sup>1</sup> Includes Indian Territory.

A considerable increase is noted in the average value per ton in 1909 (\$8.46) as compared with 1899 (\$5.76), and this combined with a larger yield per acre resulted in an even greater advance in the value of the crop per acre. As a result of this fact, together with the large increase in acreage, the total value of the hay and

forage crop in 1909 was greatly in excess of that in 1899, representing an increase of \$339,750,000, or 70.2 per cent.

The component elements of the hay and forage crop and their distribution among the several geographic divisions are exhibited in Table 43.

<b>West of the Mississippi</b> .....	39,854,553	4,486,182	6,113,587	665,571	4,533,513	877,504	1,213,739	16,166,371	3,159,933	2,700,947	15,263

The most prominent classes included in the table are, in the order of importance as measured by acreage, timothy and clover mixed, "wild, salt, or prairie grasses," "timothy alone," alfalfa, grains cut green, "other tame or cultivated grasses," and coarse forage.

The table brings out clearly the predominance of the North in the growing of hay and forage, the area devoted to these crops being over six times as great in the North as in the South. In the West, also, a somewhat larger area is devoted to these crops than in the South. The predominance of the North is evident in the case of each of the individual crops except alfalfa, grains cut green, and root forage, which are more extensively grown in the West than elsewhere; these crops, together with "wild, salt, or prairie grasses" are the only hay and forage crops that cover a greater acreage in the West than in the South. In the West South Central division there is a considerable acreage of "wild, salt, or prairie

grasses" and about the same acreage of coarse forage, which, however, forms a much larger proportion of the total, causing the division to rank second in the acreage of the latter crop.

More than half of the entire acreage in hay and forage is west of the Mississippi River, but the individual crops are quite differently distributed. East of the Mississippi is found by far the greater part of the acreage devoted to timothy alone, clover alone, timothy and clover mixed, and "other tame or cultivated grasses." These classes cover an aggregate of 40,891,000 acres, of which 28,429,000 are east of the Mississippi River.

Of the other hay and forage crops included in this table, the greater part of the acreage is west of the Mississippi River. This excess is considerable in the case of the important group of "wild, salt, or prairie grasses" and of alfalfa, but is not so marked for the other hay and forage crops.

#### VEGETABLES.

**Potatoes (Table 46).**—Potatoes were harvested in 1909 from 3,669,000 acres, as compared with 2,939,000 acres in 1899, an increase of 24.8 per cent. On the other hand, the production of potatoes increased 42.4 per cent, being in 1909, 389,000,000 bushels, and in 1899, 273,000,000 bushels, while the value of the crop increased in still greater degree, from \$98,000,000 in 1899 to \$166,000,000 in 1909, or 69.2 per cent. The crop occupied 0.8 per cent of the total acreage of improved farm land in 1909, and represented 3 per cent of the value of all crops. There is a considerable acreage of potatoes in each of the geographic divisions, but more than three-fourths of the entire acreage is in the four northern divisions. Among the states, New York has the largest acreage, closely followed by Michigan.

The increase in the acreage of potatoes between 1899 and 1909 for the United States as a whole was 730,000 acres, or 24.8 per cent, in which increase all divisions shared to some extent. Both in the East North Central and in the West North Central divisions there were nearly 150,000 acres added to the area harvested. Conspicuous gains in aggregate acreage are also noted in the Mountain, South Atlantic, and Pacific divisions. The percentage of increase in potato acreage is greatest in the Mountain division, where the acreage more than doubled. The four divisions constituting the North increased their potato acreage less rapidly than the rest of the country. The New England division is the only one in this section in which the rate of increase for the decade was greater than the average for the United States as a whole.

Table 44 gives percentages and averages derived mainly from Table 46.

Nebraska.....	3.0	0.5	73.0	97.8	0.47	0.22	34.05	21.71

Potatoes are grown on less than 1 per cent of the improved farm land of the country, but in the New England division the proportion exceeds 3 per cent and in the Middle Atlantic division it exceeds 2 per cent. Among the leading states Maine shows much the highest proportion of improved farm land devoted to potatoes, 5.8 per cent. Aroostook County, Me., far exceeds any other county in the United States in the production of potatoes.

The yield per acre in 1909 for the United States, 106.1 bushels, was greatly exceeded in the New England division. High yields were also reported in the Mountain and Pacific divisions, while the Middle Atlantic and East North Central divisions conformed more closely to the average. Among the chief producing states, Maine shows an extraordinary yield per acre, but the other states do not depart so widely from the general average. The yield per acre was greater in 1909 than in 1899 in the United States as a whole and in all divisions except the West North Central and West South Central.

The value per bushel was higher in 1909 than in 1899 in the country as a whole and in all but two of the divisions, but the increase was much less marked than in the case of the cereal crops. The average value of the crop per acre, by reason of the increased average yield, increased to a somewhat greater degree than the average value per bushel.

Sweet potatoes and yams (Table 47).—The acreage of this crop in 1909, 641,000, was greater by nearly one-fifth than that of 1899, 537,000. The absolute increase was not widely different in the three southern divisions, though it was smallest in the South Atlantic and greatest in the West South Central. There was a wider difference in the percentage of increase, which was over three times as great in the West South Central division as in the South Atlantic. The greatest absolute gain in acreage in any state was in Louisiana.

The production in 1909 was 59,232,000 bushels and in 1899, 42,517,000 bushels, the increase for the decade being 39.3 per cent, a relative gain twice as great as that in acreage. The greatest absolute gain was in the South Atlantic division, but the percentage of gain was less than that in either of the other southern divisions, though not so much smaller as in the case of acreage.

In the value of the yield there was a great increase, the aggregate crop of 1909 being valued at \$35,429,000 (equal to 0.6 per cent of the value of all crops), or 78.3 per cent more than that of 1899. In the East South Central division the value was more than twice as great, and in the West South Central division nearly twice as great, as in 1899. In the South Atlantic division the aggregate value of the crop was three-fourths greater than in 1899.

Including insignificant areas in the New England and Mountain divisions, sweet potatoes and yams, as shown by Table 47, are represented in all divisions, though the three southern divisions, led by the South Atlantic, contained in 1909 over 90 per cent of the entire acreage of this crop. In these divisions North Carolina and Georgia had each somewhat over 84,000 acres in sweet potatoes and yams, while Alabama, Mississippi, and Louisiana likewise had acreages in excess of 50,000. Table 45 gives figures derived mainly from Table 47.

Mississippi.....	8.7	0.6	79.0	73.8	0.69	0.52	54.84	38.21

<sup>1</sup> Less than one-tenth of 1 per cent.

<sup>2</sup> Not calculated because of unimportance of crop.

It will be noted that the South Atlantic division is the only geographic division in which these crops are grown on as much as one-half of 1 per cent of the improved farm land. An average yield of 92.4 bushels per acre was reported for the country as a whole in 1909. This was exceeded in the leading division, the South Atlantic, but was not attained in either of the other southern divisions, where the acreage was considerable. In both the South Atlantic and the East South Central divisions the yield per acre was greater in 1909 than in 1899. Better prices were obtained in 1909 than in 1899, and this, combined with larger average yields, brought about a considerably higher value per acre for the crop, which was common to all divisions.

## POTATOES—ACREAGE, PRODUCTION, AND VALUE, BY DIVISIONS AND STATES: 1909 AND 1899.

Other vegetables (Table 48).—Except for potatoes and sweet potatoes and yams, which are generally grown in considerable quantities, it is practically impossible to obtain a correct total of the acreage, production, or value of individual kinds of vegetables. Enumerators were instructed to obtain from every farm a separate report for any vegetable grown for sale in considerable quantities, and in all cases to ascertain the total acreage in vegetables of all classes combined, whether grown for farm use or for sale, and the total value of the product. It is scarcely likely, however, that the total acreage and value reported are as accurate in the case of vegetables as in the case of the major crops, since on many farms the production of vegetables is practically confined

to small kitchen gardens. In fact, 707,763 farms reported farm gardens in which vegetables other than potatoes were grown for farm use, but failed to give any acreage or value. In all probability, therefore, the totals obtained from the returns are understated.

In tabulating the statistics the Census Bureau has distinguished between farms which reported the production in 1909 of vegetables (other than potatoes and sweet potatoes and yams) valued at \$500 or more and those on which the product was valued at less than that amount. Farms of the former group usually produce vegetables chiefly for sale, while on a large proportion of the other farms they are raised primarily, if not exclusively, for home consumption.

The acreage of vegetables covered by the table was 2,763,269 in 1909, which was equal to 0.6 per cent of the total improved farm acreage of the country, and was 27.8 per cent greater than the acreage reported 1899. The value of the vegetables reported increased from \$120,282,000 in 1899 to \$216,257,000 in 1909, or 79.8 per cent, and in 1909 constituted 3.9 per cent of the total value of farm crops.

The acreage of vegetables on farms which produced at least \$500 worth of vegetables amounted in 1909 to

566,517, or a little over one-fifth of the total acreage in vegetables, but the value of the vegetables grown on such farms, \$60,105,000, represented 27.8 per cent of the total value reported.

As judged by the acreage and by the value of the product, the South Atlantic was the most important division in the production of miscellaneous vegetables, the East North Central ranking second. The production of vegetables is, however, widely distributed over the entire country.

TOBACCO.

Detailed statistics concerning the tobacco crop of 1909, with comparative figures for 1899, are given in Table 50. Table 49 gives percentages and averages for the important producing divisions and states, based mainly on Table 50.

The tobacco crop is more localized than most other staple crops. In the aggregate, 1,294,911 acres were in tobacco in 1909, representing 0.3 per cent of the improved farm acreage of the country. In the distribution of this acreage, the East South Central division, containing 43.3 per cent of the total, led all others. This figure was closely approximated, however, by the South Atlantic division, which contained 37.6 per cent of the total acreage. The combined acreage in the East North Central and Middle Atlantic divisions was only about half as great as that in the South Atlantic division alone. The acreage of tobacco in New England

was small and that in the region west of the Mississippi was quite insignificant. The state of Kentucky had the greatest area in tobacco—469,795 acres. North Carolina was next in order, but had an acreage less than half that of Kentucky. The only other states having an acreage in excess of 100,000 were Virginia and Ohio. These four states had three-fourths of the entire acreage devoted to this crop.

The proportion of the improved farm land in tobacco was larger in the East South Central division (1.3 per cent) than in any other, though in the South Atlantic division it was only slightly less (1 per cent). The leading states exceeded this proportion considerably.

In 1909, as compared with 1899, there was an increase in the area in tobacco of 193,451 acres, or 17.6 per cent. In the division having the largest acreage,

the East South Central, the gain was over 100,000 acres, or 22.4 per cent. An absolute gain about half as great occurred in the East North Central division, where the relative increase was nearly 50 per cent. It is noticeable that in the South Atlantic division the increase was much less, amounting to only 4.6 per cent. Next to Kentucky, where the acreage in 1909 was 84,990 more than in 1899, the greatest gain was in Ohio.

The production in 1909 was 1,056,000,000 pounds and was greater by 21.6 per cent than that in 1899, 868,000,000 pounds. The greatest absolute increase was in the East South Central division, but larger percentages of increase are noted in the case of the West North Central and New England divisions.

The average yield per acre in 1909 was 815 pounds. In New England it was more than double this amount, and in the Middle Atlantic and East North Central divisions it was considerably higher than the average. In these divisions tobacco is grown in limited areas peculiarly adapted to its cultivation. As compared with 1899, the United States as a whole and each of the divisions except the Middle Atlantic and East North Central show a larger yield per acre in 1909, indicating a greater relative increase in the production than in the acreage.

The average value per pound was greater in 1909 than in 1899, and this, combined with an increased yield per acre, brought about a very marked increase in the value per acre. The total value of the crop was much greater in 1909 (\$104,303,000) than in 1899 (\$56,988,000). The value of tobacco constituted 1.9 per cent of the total value of crops in 1909.

## COTTON AND COTTON SEED.

**Cotton (Table 52).**—Of the 32,043,838 acres of cotton harvested in 1909, the West South Central division contained nearly half, the South Atlantic division 28.1 per cent, and the East South Central division 24.7 per cent. Though cotton is reported from three other divisions, the acreages are comparatively insignificant. There are, however, three counties in southeastern Missouri in which the cotton acreage is considerable. Texas, with nearly 10,000,000 acres, has considerably over one-fourth of the total area in this crop, and Georgia has about half the acreage of Texas, while Alabama and Mississippi, which follow in the order named, have each more than 3,000,000 acres in cotton. The four states named report about 70 per cent of the total acreage. The accompanying map shows graphically the distribution of the cotton acreage among the states.

The prominence of cotton in the agriculture of the South is indicated by the large percentages of the total improved land occupied by this crop in the southern divisions, as shown by Table 51. In the South as a whole cotton occupied 21.2 per cent of the improved farm land. In each of the four states shown in Table 51 the cotton acreage exceeds one-third of all the improved land in farms.

The area in cotton increased from 1899 to 1909 by 7,768,737 acres, or 32 per cent. Of this gain more than half was reported from the West South Central division, there being a gain of nearly 3,000,000 acres in the state of Texas and of over 1,000,000 acres in the state of Oklahoma. A gain of over 1,000,000 acres was reported in Georgia. The percentage of increase in the West South Central division exceeded that for the United States as a whole, and that in the South Atlantic division almost equaled it, but the rate of gain in the East South Central division was considerably less.

<sup>1</sup> Per cent not calculated where base is less than 100.

<sup>2</sup> Includes Indian Territory.

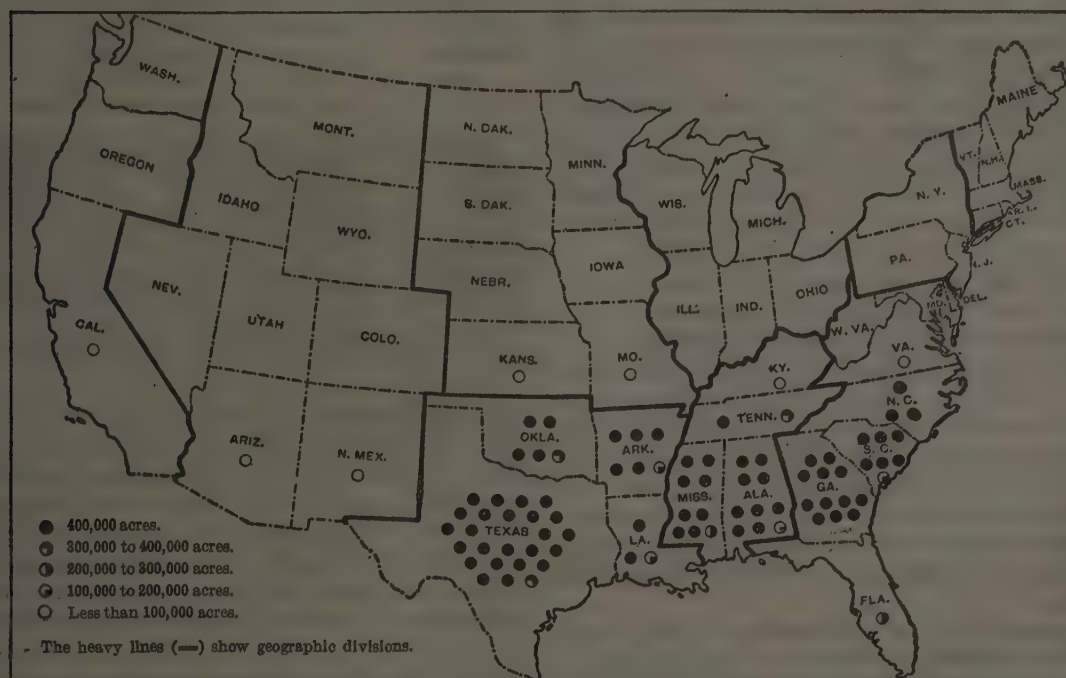

The total production of cotton in 1909 was 10,649,000 bales, an increase of 1,115,000 bales, or 11.7 per cent, over that of 1899. The yield of cotton was 0.33 bale per acre in 1909, as against 0.39 bale per acre in 1899. In each of the southern divisions, except the South Atlantic, there was a smaller average yield in 1909 than 10 years earlier. As a result the relative gain in production for the country is less than the relative gain in acreage. Two divisions, the East and West South Central, reported a smaller crop than 10 years previously. On the other hand, in the South Atlantic division the crop increased nearly one-half.

The average value of cotton per bale, which was \$33.96 in 1899, was \$66.07 in 1909, an advance of nearly 95 per cent. Hence, with an increased production, the total value of the cotton crop in 1909, \$703,619,000, was larger than that of 1899 by \$379,861,000, or 117.3 per cent. The increase in the value of the crop was sufficient to offset losses in acreage and yield, except in Louisiana.

The value of the cotton crop of 1909 was 12.8 per cent of the total value of crops for the country as a whole; for the South alone cotton represents 36.6 per cent of the total value of crops.

## COTTON.

ACREAGE, BY STATES: 1909.

**Cotton seed (Table 53).**—The agricultural schedules of 1910 and 1900 did not call for the quantity of cotton seed produced or its value, but the schedule of 1910 called for the quantity and value of the cotton seed sold during 1909. It was believed that, for various reasons, it would be impossible for many farmers to report accurately the total quantity of cotton seed produced. Inasmuch, however, as the sales of cotton seed are much less than the total production, it seemed desirable to make a rough estimate of the total quantity and value of cotton seed produced. It has been the usual custom among farmers and in the cotton trade to assume that (in the case of upland cotton, which constitutes the great bulk of the crop) about one-third of the weight of the seed cotton is lint and two-thirds seed. Although during recent years the ratios have probably been nearer 35 per cent lint and 65 per cent seed, the bureau has made its estimates of the production of cotton seed on the

more customary basis. It has further assumed for convenience that a bale of cotton as reported by the farmer contains 500 pounds of lint cotton, which is probably a slight exaggeration, inasmuch as no allowance is made for bagging and ties. The production of cotton seed by counties and states, and for the South as a whole has, in other words, been estimated by the simple method of allowing 1,000 pounds of seed for each bale of cotton. Aside from a considerable margin of error in the total quantity thus estimated for the South as a whole, there is doubtless some additional error in individual counties. The value of cotton seed has been estimated for 1899 by multiplying the estimated total quantity produced by the average price reported by the cottonseed-oil mills as paid for the seed purchased during that year; and for 1909 by multiplying the estimated quantity produced by the average value per ton reported by farmers for the seed sold by them. It is assumed that the average value of the entire crop is the same as the average

value of that part sold. Table 53 shows the estimated quantity and value of cotton seed produced for 1909 and 1899 for the country as a whole and by geographic divisions.

The estimated quantity of cotton seed produced in 1899 was 4,767,000 tons, and in 1909, 5,325,000 tons.

The estimated value of the cotton seed in 1899 was \$46,951,000, and in 1909, \$121,077,000, an increase of 157.9 per cent, as compared with an increase of 117.3 per cent in the value of lint cotton produced.

The total quantity of cotton seed reported by farmers as sold during 1909 was 2,075,000 tons, and its value \$47,350,000.

## SUGAR CROPS.

Sugar and related products are obtained in the United States from three widely different classes of plants—cane (sugar cane and sorghum cane), beets, and maple trees. Ordinary sugar is derived from sugar cane and sugar beets. Beet sugar is made altogether in large factories, which are covered by the manufactures census, and this report relates only to the production of the beets. Most of the sugar cane also is crushed in mills covered by the manufactures census. Some, however, is crushed in mills on farms and plantations, the operations of which can not be separated from the agricultural operations, so that the products are included in the present report; these mills, however, make practically no sugar, their chief product being sirup. A part of the sorghum cane produced is used for fodder, but there are numerous small mills which crush it for the purpose of producing sirup. Almost all of these mills are on farms, and the quantity as well as the value of their product in that case is covered by the census of agriculture. Maple sirup and maple sugar are almost wholly made on farms.

**Sugar cane (Table 54).**—The acreage in sugar cane in 1909 was 476,849, an increase of 23.2 per cent as compared with 1899. The production in 1909 was 6,240,000 tons, representing an increase of 48.5 per cent. The value of the sugar cane in 1909, including that of the sugar, sirup, and molasses reported on the agricultural schedules, was \$26,416,000, and constituted 0.5 per cent of the total value of farm crops for the country. The value of sugar cane produced in the South represented 1.4 per cent of the value of all crops of that section. More than two-thirds of the total acreage of sugar cane in 1909 was in Louisiana, and most of the remainder in Georgia, Texas, Alabama, and Mississippi.

Satisfactory comparison can not be made between the total value of the product as reported for 1909 and that for 1899, for the reason that in 1899 reports of many large mills on plantations were included in the agricultural census, while most such mills in 1909 were covered by the manufactures census. A much larger proportion of the value given for the earlier year therefore consists of the value of the manufactured product—sugar and molasses.

## SUGAR CANE—ACREAGE, PRODUCTION, AND VALUE.

All other states.....	127	90	324	1,001	4,242	3,429

<sup>1</sup> The values given include the value of sugar, sirup, and molasses, so far as covered by the agricultural census. See text as to incomparability of the two censuses.

Of the 6,240,000 tons of sugar cane produced in 1909, 4,639,000 tons were sold,<sup>1</sup> the amount received therefrom being \$16,766,000; in 1899, out of 4,202,000 tons produced, only 1,126,000 tons, valued at \$3,882,000, were sold. The average value per ton for the cane sold was \$3.61 in 1909 and \$3.45 in 1899, and assuming the same value per ton for the rest of the cane, the total value of cane produced in 1909 would be \$22,527,000 and the value of that produced in 1899 would be \$14,498,000. These figures represent an increase of 55.4 per cent in the total value of the crop.

In 1909 the plantation mills covered by the agricultural census made 21,633,579 gallons of sirup, 125,647 pounds of sugar, and 4,153 gallons of molasses. The total value of these products was reported as \$9,650,000.

No satisfactory comparison can be made between 1909 and 1899 as to the amount of sirup, sugar, and molasses made on plantations, for the reason already stated.

The total production of cane sugar in factories covered by the manufactures census in 1909 was 326,858 tons; of molasses, 24,588,000<sup>2</sup> gallons; and of sirup, 1,450,000<sup>2</sup> gallons; these figures all being additional to those derived from the agricultural census.

<sup>1</sup> Including that delivered to mills owned by the plantation but covered by the manufactures census.

<sup>2</sup> Does not include the operations of four establishments which manufacture sugar, two of which were operated in connection with penal institutions and two of which were engaged primarily in the manufacture of products other than those covered by the industry designated. The output of these establishments was 7,281 tons of sugar and 693,302 gallons of molasses.

**Sorghum cane (Table 55).**—The acreage of sorghum cane in 1909 was 444,089, or 51.5 per cent more than in 1899. And although the production was 13.8 per cent less than in the earlier year, probably on account of unfavorable weather conditions in 1909, the value of the crop, amounting in 1909 to \$10,174,000, or 0.2 per cent of the total value of all farm crops, showed a great increase. The value as stated includes that of the sirup made on farms. The amount of such sirup was 16,532,000 gallons, valued at \$7,963,000, and the value of the cane sold or used as forage was \$2,211,000.

The amount of sirup made in 1899 was 16,973,000 gallons and its value, \$5,288,000. The crop is quite widely distributed through the country, but is much more important in the South than in the North or the West. The leading states in acreage in 1909 were Kentucky, Texas, Tennessee, Missouri, and Arkansas.

<sup>1</sup> The values given include the value of sorghum sirup so far as covered by the agricultural census.

<sup>2</sup> Includes Indian Territory.

**Sugar beets.**—As shown in Table 56, the acreage of sugar beets in the United States in 1909, 364,093, was more than three times as great as in 1899; the production, 3,933,000 tons, was nearly five times as great; and the value, \$19,881,000, was almost six times as great. The average value per ton in 1909 was \$5.06 and in 1899, \$4.19. The crop in 1909 occupied 0.1 per cent of the improved farm acreage of the country, and its value constituted 0.4 per cent of the value of all crops.

Although sugar beets intended for sugar manufacture are now raised in a considerable number of states, much the greater part of the production is in Colorado, California, Michigan, Utah, Idaho, and Wisconsin.

The development in Colorado during the past decade has been particularly striking.

In addition to the sugar beets covered by this table, which has been confined as far as practicable to those raised for the purpose of making sugar, small quantities are raised in many states for forage.

**Maple sugar and sirup (Table 57).**—The total number of maple trees reported by the farmers as tapped in 1909 was 18,899,533; they produced 14,060,000 pounds of sugar and 4,106,000 gallons of sirup, the combined value of which was \$5,178,000.

The quantity of maple sugar made on farms was 17.9 per cent greater than in 1899, while the quantity of sirup was almost twice as great, and the combined value of the sugar and sirup nearly twice as great as in 1899. Ohio is the leading state in the production of sirup, followed by New York and Vermont; but Vermont far outranks all other states in the production of maple sugar, New York and Pennsylvania ranking second and third, respectively. In the combined value of the two products, New York ranks first.

## SUNDREY MINOR CROPS.

Under this heading are included a variety of crops of comparatively small importance which can not be logically classified under any of the other designations. The individual crops are in no way closely related to one another in use, method of production, or geographic distribution.

Table 58 gives statistics of those minor crops for which the acreage was reported, for the leading states.

## MINOR CROPS—ACREAGE, PRODUCTION, AND VALUE.

<sup>1</sup> Expressed in pounds for broom corn, hemp, hops, chicory, and mint; in bushels for chufas; and in tons for teasels and willows.

<sup>2</sup> Includes Indian Territory. <sup>3</sup> Not reported separately.

<sup>4</sup> Reported in small fractions.

**Broom corn.**—The total acreage of broom corn in 1909 was 326,102, an increase of 82.6 per cent over that in 1899. The production, however, was considerably less in the later year than in the earlier, although the value increased by 43.1 per cent, amounting in 1909 to \$5,134,000. About two-thirds of the total acreage in 1909 was in Oklahoma, and most of

the remainder in Kansas and Illinois. The acreage in Illinois was much less in 1909 than in 1899.

**Hemp.**—The production of hemp is mainly confined to Kentucky, which in 1909 reported 6,855 out of the total of 7,647 acres. The acreage was less than half as great in 1909 as in 1899, but the production fell off only 36.3 per cent and the value only 24.5 per cent. The value of the crop in 1909 was \$413,000.

**Hops.**—The acreage of hops in the United States was 44,693 in 1909, or about one-fifth less than in 1899. The production fell off in approximately the same ratio, but the value increased 92.2 per cent, amounting in 1909 to \$7,845,000. Oregon is the leading hop growing state, with nearly half the total acreage in 1909; New York, California, and Washington are the only other states of importance.

**Other crops.**—In the case of none of the other crops covered by the table did the acreage in 1909 amount to 10,000, and only for mint did the value exceed a quarter of a million dollars. With the exception of ginseng, the crops listed are virtually confined to one or two states.

**By-products** (Table 59).—Flax fiber, cornstalks, and straw, which are obtained as by-products incidental to the raising of flaxseed and the various cereal crops, have a considerable value for feeding or other purposes. They are for the most part consumed on the farms producing them, however, and their value is not included with the value of the main crops from which they are derived.

The Census Bureau did not make any attempt to ascertain the total quantity or value of these products, the schedules calling only for the quantity and value of those sold during 1909.

A comparatively small quantity of flax fiber and straw was sold by the farmers. The quantity of other straw sold, however, was considerable, the value amounting to \$3,189,000, and the amount received from the sale of cornstalks was \$801,000. The amount of straw and cornstalks sold depends very largely upon whether there are in the vicinity cities, towns, or villages where such materials are needed, inasmuch as those by-products are seldom sold by one farmer to another.

## FRUITS AND NUTS.

The value of fruits and nuts produced in the United States in 1909 amounted to \$222,024,000, or 4 per cent of the total value of farm crops. This value exceeds that reported for 1899, \$133,049,000, by 66.9 per cent. It is impossible to state the quantity of the product as a single total, but the statistics for individual classes show that in general the value increased by a much larger percentage than the production. Of the total value of fruits and nuts in 1909, \$29,974,000 was contributed by small fruits, \$140,867,000 by orchard fruits, \$22,028,000 by grapes, \$22,711,000 by citrus fruits, \$1,995,000 by other tropical and subtropical fruits, and \$4,448,000 by nuts. The value of each of these classes in 1909 was very much greater than in 1899, except in the case of small fruits. The distribution of this value in 1909 among the states is shown by the map on page 417.

Small fruits (Tables 60 and 61).—The acreage of small fruits reported in 1909 was 272,460, as compared with 309,770 in 1899, thus showing a decrease of 37,310 acres, or 12 per cent. The total production in 1909, 426,566,000 quarts, was 7.9 per cent less than ten years earlier, when the quantity produced was 463,219,000 quarts, but the value, \$29,974,000, was nearly one-fifth greater, the value of small fruits being \$25,030,000 in 1899. The acreage in 1909 represented 0.1 per cent of the total improved farm acreage of the country, and the value 0.5 per cent of the total value of farm crops. The production of small fruits taken as a group is widely distributed through the country. In acreage the East North Central division ranked first in 1909, the Middle Atlantic second, and the South Atlantic third, but in value the Middle Atlantic division outranked all others.

<sup>1</sup> Includes cranberries and all other unclassified small fruits.<sup>a</sup> Reported in small fractions.

Strawberries are the most important of the small fruits, representing in 1909 over half of the total acreage and about three-fourths of the total value. The acreage of raspberries and loganberries in 1909 was slightly less than that of blackberries and dewberries, but the production and value were considerably greater. The production of strawberries and blackberries is very widely distributed through the country, but that of raspberries, currants, and gooseberries is mainly confined to the North and West, and that of cranberries is almost wholly confined to Massachusetts, New Jersey, and Wisconsin.

The acreage of each of the separate classes of small fruits covered by the table was less in 1909 than in 1899; and the production was likewise less except in the case of cranberries for which 38,243,000 quarts were reported in 1909. In 1899 the production of strawberries was 257,427,000 quarts, that of blackberries and dewberries 62,190,000 quarts, that of raspberries and loganberries 76,628,000 quarts, that of currants 18,593,000 quarts, that of gooseberries 9,321,000 quarts, and that of cranberries 31,601,000 quarts. The value of the separate kinds of small fruits was not called for by the agricultural schedule at the Twelfth Census.

\* Reported in small fractions.

\* Includes Indian Territory.

Orchard fruits (Table 62).—Neither in 1910 nor in 1900 did the census schedules call for the acreage of orchard fruits, but at both censuses the number of trees of bearing age was called for, and at the later census also the number not of bearing age. In the report of the census of 1900, however, the belief was expressed that some trees not of bearing age were reported by the enumerators as of bearing age. This doubtless accounts wholly or in part for the decrease in the reported number of trees of bearing age for all classes of orchard fruits combined, from 369,377,000 in 1900 to 301,117,000 in 1910. Decreases also appear in the totals for the United States for every kind of orchard fruit which was reported separately. The number of trees which were not of bearing age in 1910 was 130,973,000. The total production of orchard fruits in 1909 was 216,084,000 bushels, or only slightly more than in 1899, but all the kinds of fruit except apples, in which there was a decrease, show high percentages

of increase. The value of all orchard fruits in 1909, however, \$140,867,000, was 68.2 per cent greater than the value in 1899, and represented 2.6 per cent of the total value of farm crops.

The production of orchard fruits as a group is very widely distributed throughout the country. As measured by number of trees of bearing age in 1910, the East North Central was the leading division, followed by the West North Central and the South Atlantic; but as determined by value of fruit produced in 1909 the ranking is quite different, the Middle Atlantic division standing first, the Pacific division second, and the East North Central third. The leading states in the value of fruit produced are California and New York.

Apples are much the most important of the orchard fruits, their value in 1909 being 59.1 per cent of the total. Peaches and nectarines rank next, with 20.4 per cent of the total, followed by plums and prunes, pears, cherries, and apricots and quinces in the order named.

Definite conclusions as to the relative importance of different states can not always be drawn from the number of trees of bearing age, since the trees in some states are much more prolific than in others, nor does the production of any given year furnish an altogether satisfactory index, since weather conditions may be favorable in one part of the country and unfavorable in another.

Apples (Table 63).—The number of apple trees of bearing age in 1910 was 151,323,000, and there were 65,792,000 trees not of bearing age. The production in 1909 was 147,522,000 bushels, as compared with 175,398,000 bushels in 1899, a decrease of 15.9 per cent. The value of the apple crop in 1909 was

\$83,231,000 or 1.5 per cent of the total value of all crops. Values were not reported for individual kinds of fruit in 1899.

While apple production is widely distributed, the leading geographic divisions are the Middle Atlantic, East North Central, and West North Central. There is, however, a marked development in the western sections of the country, which in part explains the fact that in 1910 the ratio of the number of trees not of bearing age to the number of bearing age was much higher in the West South Central, Mountain, and Pacific divisions than in any of the more easterly divisions except the South Atlantic.

Peaches and nectarines (Table 64).—The number of peach and nectarine trees of bearing age April 15, 1910, was 94,507,000, and the number not of bearing age 42,266,000. The value of peaches and nectarines produced in 1909 was \$28,781,000. The production is very widely distributed. In number of trees of bearing age in 1910 the West South Central division ranked first and the South Atlantic division second; but in the production of 1909 the Pacific division (in which nearly the entire production is in California) decidedly out-ranked all others, with the East South Central division second and the South Atlantic third.

Pears (Table 65).—The number of pear trees reported as of bearing age in 1910 was 15,172,000, and there were 8,804,000 trees not of bearing age. The production increased from 6,625,000 bushels in 1899 to 8,841,000 bushels in 1909, or 33.4 per cent. The value of the crop in 1909 was \$7,911,000. In number of trees of bearing age in 1910, the Middle Atlantic and East North Central divisions ranked far above the others, but in the production for 1909 the Pacific division stood first. California and New York together produced about three-eighths of the total pear crop. Only one other state, Michigan, reported the production of more than 500,000 bushels of pears.

**Plums and prunes (Table 66).**—Plum and prune trees of bearing age in 1910 numbered 23,445,000 and those not of bearing age 6,924,000. The production in 1909 was 15,480,000 bushels, or 76.6 per cent greater than that in 1899, 8,764,000 bushels. The value of the crop in 1909 was \$10,299,000. The Pacific division in 1910 had over two-fifths of the trees of bearing age, and in 1909 produced nearly four-fifths of the total crop. New York is the most important of the eastern states in the production of plums and prunes.

**Cherries (Table 67).**—The number of cherry trees of bearing age in 1910 was 11,822,000, while trees not of bearing age numbered 5,622,000. The production in 1909 was 4,126,000 bushels, or 43.6 per cent more than that in 1899, 2,873,000 bushels. The crop in 1909 was valued at \$7,231,000. The East North Central was the leading division, both in number of trees and in production, while the Pacific division ranked second in production but third in number of trees not of bearing age and fifth in number of trees of bearing age.

**Apricots (Table 68).**—The production of apricots is mainly confined to California, which produced 98 per cent of the total crop in 1909. In Kansas, Oklahoma, and Texas there are a good many apricot trees, but the production reported for 1909 was insignificant, perhaps because of temporarily unfavorable climatic conditions. The number of trees of bearing age in the United States in 1910, as reported, was 3,670,000. The production in 1909 was 4,150,000 bushels, or 57.1 per cent more than that in 1899. The value of the crop in 1909 was \$2,884,000.

**Quinces (Table 68).**—The production of quinces is much less important than that of the fruits previously mentioned. The total number of trees of bearing age in 1910 was 1,154,000, and of trees not of bearing age 595,000. The production in 1909, 429,000 bushels, was valued at \$517,000, New York, Ohio, and Pennsylvania being the leading states. This crop was not separately reported at the census of 1900.

\* Includes Indian Territory.

\* Not reported separately.

**Grapes (Table 69).**—The total number of grapevines of bearing age in 1910 was 223,702,000, and the number not of bearing age 59,929,000. The production of grapes in 1909, 2,571,065,000 pounds, was nearly twice as great as in 1899. The value in 1909, \$22,028,000, represented 0.4 per cent of the total value of farm crops. The value given for 1899, \$14,090,000, is not precisely comparable with that for 1909, since it includes the value of such derived products as wine and raisins, while the value given for 1909 represents the fruit alone. Since, however,

in all states except California, the larger part of the grapes are sold in their natural condition, the values shown for most of the states are probably quite closely comparable.

<sup>1</sup> Includes value of wine, grape juice, raisins, etc.

\* Includes Indian Territory.

California had nearly two-thirds of the total number of vines of bearing age in 1910 and produced more than three-fourths of the total grape crop of 1909. The value of the California product, however, in 1909 represented slightly less than half of the total for the country. The two states which rank next in the

production of grapes are New York and Michigan, but they are raised to some extent in nearly every state. In California and Michigan the production increased greatly between 1899 and 1909.

**Tropical and subtropical fruits** (Tables 70 and 71).—The total value of tropical and subtropical fruits produced in 1909 was \$24,707,000, or nearly three times the value of such fruits produced in 1899. The value of citrus fruits was \$22,711,000, of figs \$804,000, of pineapples \$734,000, and that of olives \$405,000, other fruits being represented by relatively insignificant amounts. The value of the separate kinds of fruit was not reported for 1899. The production of citrus fruits in 1909 amounted to 23,502,000 boxes, as compared with 7,098,000 boxes in 1899—an increase of 231.1 per cent. To the value of the citrus fruits in 1909 oranges contributed \$17,566,000, lemons \$2,994,000, and grapefruit \$2,061,000. Much the greater part of the tropical and subtropical fruit produced in the United States is grown in California and Florida, the value of the product of the former state in 1909 constituting 67.8 per cent of the total, and that of the latter 28.7 per cent.

**Oranges.**—In 1910 the number of orange trees of bearing age was 9,738,000, and the number not of bearing age, 4,327,000.<sup>1</sup> The production in 1909 amounted to 19,487,000 boxes, or more than three times the number in 1899. The value of the 1909 crop was \$17,566,000. Nearly three-fourths of the 1909 crop was produced in California, and most of the remainder in Florida. The production in the latter state in 1909 was about eighteen times as great as in 1899, the crop of the earlier year having been greatly reduced by disastrous frosts.

**Lemons.**—There were 957,000 lemon trees of bearing age in the United States in 1910, and 396,000 not of bearing age. The production in 1909 amounted to 2,770,000 boxes, as compared with 877,000 boxes in 1899—an increase of 215.9 per cent. The value of the crop of 1909 was \$2,994,000, the average value per box being somewhat greater than in the case of oranges. Nearly the entire production of lemons was in California.

**Grapefruit.**—No other class of fruit shows so great an increase between 1899 and 1909 as pomelo, or grapefruit. While the crop of 1899 was affected by the frosts in Florida, the leading state in the growing of this fruit, the production during recent years has been very much greater than during even the most favorable years prior to 1900. The total number of grapefruit trees of bearing age in 1910 was 710,000, and of trees not of bearing age 641,000. The production in 1909 amounted to 1,189,000 boxes, as com-

pared with 31,000 boxes in 1899, and the crop was valued at \$2,061,000.

**Other citrus fruits.**—The other citrus fruits are relatively unimportant. They include limes, tangerines, and kumquats, chiefly produced in Florida, and mandarins, chiefly produced in Louisiana. The total production of limes amounted to only about 11,000 boxes, valued at slightly more than \$12,000. That of tangerines nearly 39,000 boxes, valued at almost \$69,000, while that of mandarins and kumquats was very small.

## CITRUS FRUITS—TREES, PRODUCTION, AND VALUE.

Florida.....	1,955	222	1,091	2,768	.....

<sup>1</sup> Includes a small number of citron trees in 1910 and the value of their product in 1909, also a small amount of product in 1899.

<sup>2</sup> Exclusive of a small quantity of citrons.

<sup>3</sup> No report.

**Figs.**—The production of figs is somewhat more widely distributed than that of the citrus fruits. The total number of trees of bearing age in 1910 was 822,000, but there was a still larger number not of bearing age. The production in 1909 amounted to 35,060,000 pounds, valued at \$804,000; the crop in 1899 amounted to 12,995,000 pounds. The leading state is California, which produced nearly two-thirds of the total crop in 1909.

**Olives.**—The production of olives is practically confined to California and Arizona. The crop of 1909, 16,405,000 pounds, was more than three times as great as that of 1899.

**Pineapples.**—The production of pineapples in the United States is virtually confined to Florida. The crop of 1909 amounted to 779,000 crates. The production as reported for 1899 was expressed in number of pineapples, but on the basis of the average number per crate (about 30) it amounted to about 95,000 crates.

<sup>1</sup> It should be noted that, as in the case of orchard fruits, the number of tropical and subtropical fruit trees reported as of bearing age in 1900 is believed to have included a good many not of bearing age, and to be, therefore, incomparable with the number for 1910.

**Other tropical and subtropical fruits.**—In addition to the fruits already listed, there are a considerable number of other tropical and subtropical fruits produced in small quantities in the United States, mainly in Florida and California. These include bananas, avocado pears, guavas, mangoes, persimmons (Japanese), loquats, pomegranates, and dates.

**NONCITRUS TROPICAL AND SUBTROPICAL FRUITS—TREES, PRODUCTION, AND VALUE.**

<sup>1</sup> Expressed in pounds for figs, olives, guavas, pomegranates, and dates; in crates for pineapples and avocado pears; in bunches for bananas; in boxes for mangoes and loquats; and in bushels for persimmons (Japanese).

<sup>2</sup> Number of plants.

<sup>3</sup> Not reported separately.

**Nuts (Tables 72 and 73).**—Systematic cultivation of nut trees, which is for the most part comparatively recent in the United States, is as yet largely confined to a few states in the South and on the Pacific coast. Throughout large sections of the country, however, there are many wild nut trees, the aggregate production of which is considerable; but in most cases the nuts obtained from such trees are not looked upon as a commercial crop and are mainly consumed on the farm. Doubtless the production of such wild nuts reported to the Census Bureau is much less than the actual production.

The total nut crop reported for 1909, 62,328,000 pounds, was 55.7 per cent greater than that reported for 1899, and the value, \$4,448,000, was 128.1 per cent greater. California is by far the most important state in the production of nuts, and Texas ranks next. No other state reported as much as \$100,000 worth of nuts in 1909.

**NUTS—PRODUCTION AND VALUE.**

<sup>1</sup> Includes Indian Territory.

The most important nut crops are Persian or English walnuts, pecans, and almonds, which are the only nuts that are, on any large scale, produced by cultiva-

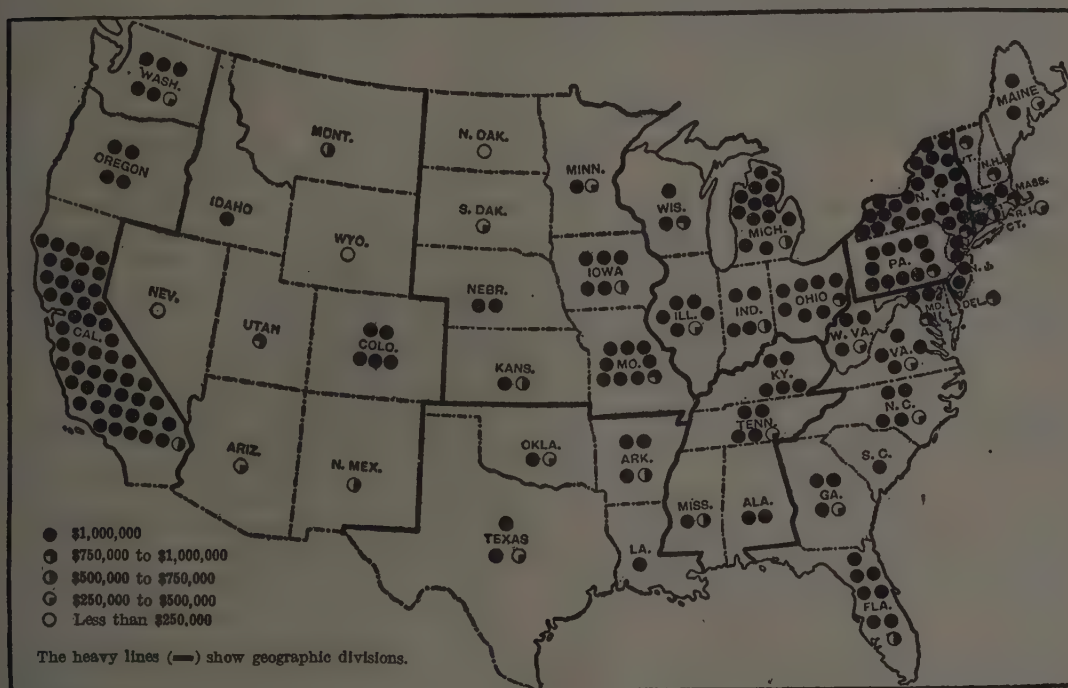

tion. The combined value of these three classes of nuts in 1909 amounted to \$3,981,000, or about nine-tenths of the total for all nuts.

The crop of Persian or English walnuts in 1909, 22,027,000 pounds, was more than twice as great as that in 1899. Most of these nuts were grown in California. The production of pecans in 1909, 9,891,000

pounds, was more than three times as great as that of 10 years earlier. About three-fifths of the crop was grown in Texas, and most of the remainder in Oklahoma, Louisiana, Mississippi, Georgia, and Florida. The production of almonds, which is mainly confined to California, amounted to 6,794,000 pounds in 1909, or somewhat less than in 1899.

### FRUITS AND NUTS.

VALUE, BY STATES: 1909.

## FLOWERS AND PLANTS, NURSERY PRODUCTS, AND FOREST PRODUCTS.

**Flowers and plants.**—Table 74 includes statistics both for flowers and plants raised on ordinary farms and for those raised by florists' establishments devoted exclusively to this branch of industry. Often such establishments have comparatively little land, but raise their products chiefly in greenhouses and by highly intensive methods. The acreage statistics, therefore, have comparatively little significance. The acreage reported for the United States as a whole in 1909 amounted to 18,248. The value of the flowers and plants raised was \$34,872,000, an increase of 85.9 per cent as compared with 1899. These products contributed 0.6 per cent of the total value of crops in 1909. The value of flower seeds is not included in this table, but appears, together with that of vegetable seeds, in Table 38.

As might be expected, the raising of flowers and plants is most extensively carried on in the neighborhood of large cities. New York, Pennsylvania, Illinois, New Jersey, Massachusetts, and Ohio are the leading states in this industry according to value of products. The raising of flowers and plants is also an important industry on the Pacific coast.

**Nursery products.**—As in the case of flowers and plants, the statistics presented in Table 74 cover the raising of nursery products not only on ordinary farms, but also by establishments which devote themselves exclusively to this branch of agriculture, and which employ only intensive methods. The acreage in 1909, 80,618, was 35.5 per cent greater than in 1899, while the value of products, \$21,051,000, was more than twice as great as 10 years earlier, and was equal to 0.4 per cent of the total value of farm crops.

In value of nursery products the Middle Atlantic division ranked first, the West North Central second, the Pacific third, and the East North Central fourth. New York reported a greater value of such products than any other state, California being next in order.

**Forest products.**—The census schedule for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farms, sold, or on hand April 15, 1910;" and also, as a separate item, for the "amount received from sale of standing timber in 1909." The schedule of the 1900 census was substantially similar, except that it did not specifically mention standing timber; it is probable that some sales of standing timber were included in the returns, but that the total value of forest products as reported for 1899 was somewhat lower than it would have been if the schedule had been worded as in 1910. The value of forest products at each census, as shown in Table 74, represents only that derived from farms, which is much less than that derived from land not in farms. Most of the forest products of farms are derived from natural forests, as there is yet little systematic planting of forest trees.

The total value of the forest products of farms in 1909 was \$195,306,283, which is 77.8 per cent greater than that reported for 1899. Of this amount, \$102,782,078 was the value of products used or to be used on the farms themselves, \$70,800,983 that of products sold or intended for sale, and \$21,723,222 the amount received for standing timber. The total value of forest products of farms in 1909 represented 3.6 per cent of the value of all crops.

The production of forest products by farmers is widely distributed. In 1909 the South Atlantic division outranked all others in the value of such products, and was followed by the East North Central and East South Central divisions. The states of North Carolina, New York, and Virginia each reported forest products valued at more than \$10,000,000. In total value of forest products, including those not produced on farms, the ranking of the states would be very different.

## CHAPTER 14.

### IRRIGATION AND IRRIGATED CROPS.

**Introduction.**—This chapter contains, in condensed form, the principal data regarding irrigation derived from the Thirteenth Decennial Census, taken in the year 1910.

An amendment to the Thirteenth Census act, approved February 25, 1910, contained the following clause relating to irrigation:

Inquiries shall also be made as to the location and character of irrigation enterprises, quantity of land irrigated in the arid region of the United States and in each state and county in that section under state and Federal laws; the price at which these lands, including water rights, are obtainable; the character and value of crops produced on irrigated lands, the amount of water used per acre for said irrigation and whether it was obtainable from national, state, or private works; the location of the various projects and methods of construction, with facts as to their physical condition; the amount of capital invested in such irrigation works.

As the Office of Experiment Stations of the United States Department of Agriculture employs a corps of state irrigation agents, an arrangement was made by which these state irrigation agents cooperated in the supervision in their respective states of the work of the special agents of the Bureau of the Census in collecting statistics of irrigation.

The information called for by this law which could be supplied by farm operators was obtained on supplemental schedules by the regular census enumerators as a part of the agricultural census. The remaining data, which were supplied by the owners or officials of irrigation enterprises, were obtained on special schedules by the special agents. The data relating to crops presented here were taken from the supplemental schedules filled out by the agricultural enumerators. With the exception of the statistics as to the number of farms irrigated, which were obtained as explained on the following page, all the other data presented here were taken from the special schedules.

The law relating to the special irrigation census, quoted above, provided that the inquiry should cover the "arid region of the United States." For the purposes of this report the "arid region" has been held to include all sections of the United States where irrigation is generally practiced in the growing of farm crops. As defined in this way, the "arid region" includes the western parts of the tier of states formed by

the Dakotas, Nebraska, Kansas, Oklahoma, and Texas, and all of the states between these and the Pacific Ocean. In parts of this great territory there is abundant rainfall; but in each of the states comprised in it there are considerable sections, and in some very extensive areas, where farming is largely dependent upon irrigation.

The special inquiry was also extended to the rice growing districts of Louisiana, Texas, and Arkansas, but the rice district has been treated separately in this report. (See p. 431.)

In accordance with the law, the enterprises have been classified primarily according to their legal status—that is, according to the state or Federal laws by virtue of which they were created, or according to other features of their legal and economic form. The types of enterprises distinguished are as follows:

**United States Reclamation Service enterprises**, established under the Federal law of June 17, 1902, providing for the construction of irrigation works with the receipts from the sale of public lands.

**United States Indian Service enterprises**, established under various acts of Congress providing for the construction by that service of works for the irrigation of land in Indian reservations.

**Carey Act enterprises**, established under the Federal law of August 18, 1894, granting to each of the states in the arid region 1,000,000 acres of land on condition that the state provide for its irrigation, and under amendments to that law granting additional areas to Idaho and Wyoming.

**Irrigation districts**, which are public corporations established under state laws and empowered to issue bonds and levy and collect taxes for the purchase or construction of irrigation works.

**Cooperative enterprises**, which are controlled by the water users combined in some organized form of cooperation under state laws. The most common form of organization is the stock company, the stock of which is owned by the water users. In Arizona and New Mexico many of the cooperative enterprises are operated under laws regulating "community" ditches.

**Individual and partnership enterprises**, which belong to individual farmers, or to groups of farmers associated without formal organization. It is not always possible to distinguish between partnership and cooperative enterprises; but as the difference is slight this is unimportant.

**Commercial enterprises**, incorporated or otherwise, which supply water for compensation to parties who own no interest in the works. Persons obtaining water from such enterprises are usually required to pay for the right to receive water and to pay, in addition, annual charges based in some instances on the acreage irrigated and in others on the quantity of water received.

## THE ARID REGION AS A WHOLE.

**Summary.**—Table 1 summarizes the principal data for the arid region as a whole as returned at the census of 1910, and includes corresponding data for the preceding census as far as available. Unless otherwise indicated the figures relate to the year in which the census was taken. In the reports of the censuses of 1900 and 1890 data relating to irrigation on Indian reservations were excluded from the totals for the arid region, but for the later census they are included. Since the acreage which was irrigated on Indian reservations in 1909 was only 172,912, or 1.3 per cent of the total acreage reported as irrigated, it has not been deemed advisable to eliminate the figures for Indian reservations in making comparisons between the different censuses. The general agricultural statistics given in the table for purposes of comparison cover the entire areas of the states included in the arid region, as defined on the preceding page, although in some of the states the territory which requires no irrigation vastly exceeds the irrigated territory.

The number of farms irrigated is the number of farms on which irrigation is practiced, regardless of the extent of such irrigation, and is equivalent to the term "number of irrigators" used in previous census reports. The number given for 1909 is made up of the number reported on the supplemental agricultural schedules by

the regular enumerators, together with an estimate of the number of farms served by enterprises which were reported by special agents but not by the regular enumerators. The reports of the special agents stated only the acreage supplied by such enterprises, and the number of farms was estimated on the basis of the average acreage irrigated per farm, as shown by the supplemental schedules.

The acreage irrigated in 1909 is that reported by the special agents from information secured from owners or officials of irrigation enterprises or, in some instances, from public records. This acreage is probably in some measure an overstatement. There is a natural tendency for the officials of irrigation enterprises to report as irrigated the entire areas of farms of which only a part is irrigated. Furthermore, some farms receive water from more than one enterprise, and may be reported as irrigated by each, which results in duplication. It is believed, however, that the acreage given is within 10 per cent of the correct figure. In addition to information as to the acreage irrigated in 1909 data were collected as to the acreage the enterprises were capable of supplying with water in 1910 and the total acreage which enterprises completed or under way in 1910 were designed to supply ultimately (designated as "acreage included in projects").

<sup>1</sup> Figures relate to entire areas of states in the arid region, the figures for 1900 including Indian Territory.

<sup>2</sup> Cost of systems operated in 1899.

<sup>3</sup> Based on acreage irrigated in 1899.

<sup>4</sup> In 1899.

<sup>5</sup> Based on cost to July 1, 1910, and acreage enterprises were capable of irrigating in 1910.

<sup>6</sup> Figures not comparable. (See explanation in text.)

The number of farms on which irrigation was practiced, for purposes other than rice growing, in 1909 in the states of the arid region was 158,713, or 11 per cent of the total number of farms in the same states.

While the total number of farms in this region, including the entire area of states in which irrigation is practiced in the western part, increased 31.5 per cent between 1900 and 1910, the number of farms on

which irrigation was practiced increased 47.7 per cent between 1899 and 1909, the irrigated farms forming a larger percentage of all farms in 1909 than in 1899. The acreage reported as irrigated in 1909 was 13,738,485, which constitutes 1.2 per cent of the total land area of the same states, 3.5 per cent of the total land in farms, and 7.9 per cent of the improved land in farms. There was an increase of 82.7 per cent in such acreage between 1899 and 1909, a rate of increase much higher than that in the number of farms irrigated, the average irrigated acreage per farm being greater for 1909 than for 1899.

The acreage to which enterprises were ready to supply water in 1910 was 19,334,697, or 5,596,212 acres in excess of the acreage irrigated in 1909, while the acreage included in all projects in 1910, whether completed or in process of development, was 31,111,142, or 17,372,657 acres greater than the acreage reported as irrigated in 1909.

The total length of ditches used for irrigation in 1910 was 125,591 miles. There were 6,812 reservoirs hav-

ing a combined capacity of 12,581,129 acre-feet, or nearly 1 acre-foot of reservoir capacity for each acre irrigated from any source in 1909. The number of pumping plants reported was 13,906 and the acreage supplied by them 477,625.

The total cost of irrigation enterprises to July 1, 1910, was \$307,866,369, or \$15.92 per acre of the land which these enterprises were capable of supplying with water in 1910. The increases in the items relating to cost are the most conspicuous shown. The total cost of irrigation enterprises increased between 1900 and 1910 by 359.8 per cent, and the average cost per acre covered increased also, although much less in degree. (As to the comparability of the figures for this item, however, see the discussion of this subject following Table 12.) The average cost of operation and maintenance per acre of land irrigated for the year 1909 shows also a large increase—181.6 per cent—over the cost shown for 1899. It is believed, however, that the cost shown for 1899 is not properly comparable with that for 1909.

### FARMS AND ACREAGE IRRIGATED.

**Number of farms irrigated.**—Table 2 gives, by states, the number of farms irrigated in 1909, 1899, and 1889, together with the decennial rates of increase.

<sup>1</sup> A minus sign (—) denotes decrease.

<sup>2</sup> Per cent not calculated when base is less than 100.

<sup>3</sup> Exclusive of farms irrigated for rice growing.

The total number of farms on which irrigation was practiced in 1909 was 158,713. California contained the largest number of such farms, having about one-fourth (24.8 per cent) of the total number, and Colorado the next largest number, nearly one-sixth (16.3 per cent) of the total, while Utah ranked third in this respect, with about one-eighth (12.4 per cent) of the total.

The percentage of increase between 1889 and 1899 in the number of farms irrigated was more than double that during the succeeding decade, but the absolute

increases during the two decades were approximately equal. Nebraska showed the largest percentage of increase during the former period and Texas during the latter period, but in neither state is the actual number of irrigated farms large. In Nebraska and South Dakota there were decreases between 1899 and 1909. The largest absolute increase in both decades was in California. In the period 1899 to 1909 the next largest increase was in Colorado, and in the period 1889 to 1899 in Utah.

**Acreage irrigated.**—Table 3 gives, by states, the acreage irrigated in the arid region in 1909, 1899, and 1889, respectively, with the percentage of increase in each decade.

<sup>1</sup> Exclusive of land irrigated for rice growing.

The total acreage reported as irrigated in 1909 was 13,738,485, an increase of 6,219,958 acres, or 82.7 per cent, as compared with 1899. The increase in the preceding decade was 3,887,146 acres, or 107 per cent.

In total acreage irrigated California ranked first in 1889, Colorado second, and Montana third. In both 1899 and 1909 Colorado reported the largest irrigated acreage, while California and Montana were second and third, respectively. Idaho followed closely in 1909. From 1899 to 1909 California showed the largest absolute increase, followed by Colorado, Idaho,

and Montana in the order named. In percentage of increase for this decade, however, Texas ranked first, Washington second, Idaho third, and New Mexico fourth.

Acreage irrigated in 1909, acreage enterprises were capable of irrigating in 1910, and acreage included in projects.—In Table 4 data as to the acreage irrigated in 1909, the acreage enterprises were capable of irrigating in 1910, and the acreage included in projects are presented, with classification according to the type of enterprise.

<sup>1</sup> Exclusive of land irrigated for rice growing.

The enterprises were reported in 1910 as capable of irrigating 19,334,697 acres, which is 5,596,212 acres in excess of the acreage actually irrigated in 1909. This excess shows the extent to which the irrigated area can be enlarged without the construction of additional works. It does not, however, represent land available for settlement in the latter year, as much of the land that was under ditch in 1910 but not irri-

gated in 1909 was already taken up, being in farms not completely under cultivation. The excess acreage lies principally in Colorado, Idaho, California, Montana, and Wyoming, these states ranking in the order named in this respect.

The acreage included in projects which were either completed or under way July 1, 1910, as reported by the various enterprises—31,111,142—was 17,372,657

acres greater than the acreage irrigated in 1909. The figure would indicate the amount by which the irrigated acreage may be extended upon the completion of existing enterprises, were it not probable that the owners of these enterprises in some cases have overestimated what they can accomplish. It is certain, however, that much additional land will later be provided with a water supply by works that were in process of construction in 1910. The amount of excess of the acreage included in projects over that irrigated in 1909 is also greatest in the states named in the preceding paragraph and in Oregon.

Table 5 shows by percentages the relative importance of the several classes of enterprises as judged by acreage.

CLASS OF ENTERPRISE.	PER CENT OF TOTAL FOR ARID REGION.		
	Acreage irrigated in 1909.	Acreage enterprises were capable of irrigating in 1910.	Acreage included in projects.
All classes.....	100.0	100.0	100.0
U. S. Reclamation Service.....	2.9	4.1	6.3
U. S. Indian Service.....	1.3	1.9	2.8
Carey Act enterprises.....	2.1	5.6	8.3
Irrigation districts.....	3.8	4.1	5.1
Cooperative enterprises.....	33.8	38.0	28.4
Individual and partnership enterprises.....	45.5	39.6	32.6
Commercial enterprises.....	10.6	12.5	16.5

Nearly one-half (45.5 per cent) of the acreage irrigated in 1909 was served by individual and partnership enterprises, and about one-third (33.8 per cent) by

cooperative enterprises, which are controlled by the water users. Irrigation districts, which served 3.8 per cent, are also controlled by the water users. Thus about 83 per cent of the acreage irrigated in 1909 received a water supply from works controlled by the water users. United States Reclamation Service and Carey Act enterprises, which irrigated 2.9 per cent and 2.1 per cent, respectively, of this total acreage, are to be turned over to the water users when the rights are paid for, and many of the commercial enterprises are operating under a similar arrangement.

Acreage irrigated, classified by source of water supply.—In Table 6 the acreage irrigated in the arid region in 1909 is classified according to the source of the water supply. Where a supply is received from more than one source, the land is classified under the source from which the principal supply is derived. In the aggregate considerable areas are supplied with water from more than one source. Thus, in California, large areas receive water both by gravity diversion from streams and by pumping from wells, while in Texas some of the newer canals on the Rio Grande receive water by gravity when the river is high and by pumping when the river is low. In both instances most of this land is classed with the acreage that received water by gravity from streams. The only reservoirs which are treated as independent sources of supply are those filled by collecting storm water or from watercourses which are ordinarily dry. When reservoirs are filled from streams or wells, the primary source is considered the source of supply.

Table 6

<sup>1</sup> Exclusive of land irrigated for rice growing.

More than nine-tenths (92.9 per cent) of the acreage irrigated in 1909 was supplied with water by gravity diversion from streams, and, including cases where water was pumped, streams constituted the source of supply for 94.1 per cent of the total acreage irrigated. Wells supplied the next largest acreage, 3.3 per cent of the total, about one-third of this acreage being watered

by flowing wells. Springs furnished the supply for 1.4 per cent of the total acreage irrigated, and reservoirs and lakes each for less than 1 per cent. Of the total acreage irrigated from wells, California contained 77.6 per cent, and New Mexico 12.1 per cent. In the case of the other sources of supply the acreage irrigated was more generally distributed among the states.

## IRRIGATION WORKS.

Number of enterprises and number and length of ditches.—Table 7 shows the number of irrigation enterprises; and the number and length of main and lateral ditches, respectively, reported in 1910. It should be borne in mind that some lateral ditches are much larger than some main ditches, and that the distinction is more or less arbitrary.

STATE.	Number of enterprises.	DITCHES.

<sup>1</sup> Exclusive of enterprises supplying water for the irrigation of rice.

Reservoirs.—Table 8 gives, by states, the number and capacity of reservoirs used for irrigation in 1910. The acre-foot, used to express capacity, is the quantity of water required to cover 1 acre to the depth of 1 foot, or 43,560 cubic feet. Most of these reservoirs are filled from streams during flood season and in the winter, the stored water being used in the late summer on land which receives its earlier supply by gravity diversion from streams. Some, however, store storm water flowing in drainage channels which are ordinarily dry.

STATE.	RESERVOIRS.	
	Number.	Capacity (acre-feet).
<b>Total</b> .....	6,612	12,581,129

<sup>1</sup> Exclusive of reservoirs supplying water for the irrigation of rice.

Wells.—Table 9 shows the number and capacity of flowing and pumped wells used for irrigation in 1910. The capacities reported are estimates made by the owners, and are often not very accurate, as few well owners have facilities for measuring the discharge of wells. In the case of pumped wells many of the statements of capacity are based on the estimated pump capacity, the capacity of the wells themselves never having been tested.

<sup>1</sup> Increase computed on the basis of the cost to July 1, 1910.

<sup>2</sup> Includes \$273,000 for Kansas, Nebraska, North Dakota, South Dakota, and Texas, which are not shown separately in the report of the census of 1890, these five states being grouped under the designation of "subhumid region."

<sup>3</sup> Separate figures not available.

<sup>4</sup> Exclusive of enterprises supplying water for the irrigation of rice.

The cost of irrigation enterprises up to July 1, 1910, as reported at the Thirteenth Census, includes the cost of construction, the cost of acquiring rights, and any added costs incident to construction, such as the purchase of land for rights of way, the building of structures for use in operation and maintenance, and engineering and legal expenses. For all of the larger enterprises the cost is that given by the owners, but it is probable that in many cases this is estimated rather than taken from actual accounts. For some of the smaller enterprises the cost was estimated by the special agents of the Census Bureau, and in the case of some schedules received by mail the cost has been estimated in the bureau on the basis of the average cost per acre for other enterprises of the same class in the same vicinity. Many of the smaller ditches were built a number of years ago by their owners without the expenditure of much, if any, money, and many of these have since changed hands. In such cases the cost given by the present owners is only a rough estimate. The data as to cost reported for 1899 and 1889 are probably somewhat less accurate than those for 1910. The figure for cost given in the Twelfth Census report is designated as the "cost of construction of systems operated in 1899." The figure for cost at the Eleventh Census is an estimate consisting of the sum of the amounts obtained by multiplying the acreage irrigated by the average first cost per acre of obtaining water, or of water rights, as given by the irrigators. Although not specifically stated in the reports for the

previous censuses, it is probable that the figures there given include the same items represented in the figure for cost in 1910.

The total cost of irrigation enterprises up to July 1, 1910, was reported as \$307,866,369, which represents an increase of \$240,904,094, or 359.8 per cent over the cost reported at the census of 1900. In no state in the arid region was the increase in cost for this period less than 100 per cent, the highest percentage of increase being in North Dakota and the lowest in Oklahoma. With respect to absolute increase California ranked first, Colorado second, Idaho third, and Montana fourth. The year 1910 was in the midst of a period of great activity in the construction of irrigation works, and on July 1, 1910, a large number of works were incomplete. The "estimated final cost" reported, \$424,281,186, is the sum of the cost up to July 1 and the estimated cost of completing these unfinished works.

**Average cost per acre.**—Table 12 gives the average cost of irrigation enterprises per acre. The averages for 1889 and 1899 are, with one exception, for the acreage actually irrigated in the respective years. These averages are probably considerably higher than if they had been calculated on the basis of the acreage the enterprises were capable of irrigating. At the Thirteenth Census the average cost per acre has been computed by dividing the cost to July 1, 1910, by the acreage which enterprises were capable of irrigating in 1910. Averages based on the acreage irrigated in 1909 and the cost

to July 1, 1910, are, however, also presented as a rough basis for comparison with the averages for the previous censuses. In addition, averages based on the estimated final cost of enterprises and the acreage which their owners expect finally to be able to supply with water are given. These latter averages would represent most accurately the true cost of providing works to supply water for irrigation, were it not for a more or less general tendency to underestimate cost and overestimate the acreage it will be possible to

irrigate.

Table 12

AVERAGE COST OF IRRIGATION ENTERPRISES PER ACRE.

STATE.	1910			1899	1889
	Based on cost to July 1, 1910, and acreage enterprises were capable of irrigating in 1910.	Based on cost to July 1, 1910, and acreage irrigated in 1909.	Based on estimated final cost and acreage included in projects.		
Total	\$15.92	\$22.41	\$13.64	\$8.51	\$8.15

Kansas	9.73	26.44	8.47	22.43	(?)
Montana	10.42	13.66	9.21	4.92	4.63
Nebraska	18.17	30.47	13.95	8.82	(?)
Nevada	7.99	9.56	9.89	3.05	7.58
New Mexico	14.19	19.83	10.56	20.43	5.58
North Dakota	38.17	31.62	21.91	3.49	(?)
Oklahoma	7.36	10.76	5.53	7.93	(?)
Oregon	15.35	18.60	15.72	4.75	4.64
South Dakota	23.89	48.11	18.83	6.52	(?)
Texas <sup>1</sup>	21.57	44.72	11.43	17.22	(?)
Utah	11.22	14.04	9.16	9.32	10.55
Washington	34.47	48.51	27.32	12.08	4.03
Wyoming	10.80	15.62	9.18	6.6	3.62

<sup>1</sup> Based on acreage under-irrigated in 1909.

<sup>2</sup> Figures for Kansas, Nebraska, North Dakota, South Dakota, and Texas are not shown separately in the report of the census of 1900, these five states being grouped under the designation of "southward region." The average for the southward region was \$4.07.

<sup>3</sup> Exclusive of land irrigated for rice growing.

The average cost per acre based on the acreage irrigated in 1909 was \$22.41; that based on the acreage enterprises were capable of irrigating in 1910 was \$15.92; and that based on the estimated total cost and the acreage included in projects was \$13.64.

Between 1889 and 1899 there was no marked increase in the average cost of irrigation enterprises per acre of land irrigated, but in 1910 the average cost per acre was very much higher. The chief reason for this is the fact that, naturally, irrigation enterprises were first undertaken where water could be most easily secured and engineering difficulties were least serious. The enterprises undertaken during more recent years have been of necessity on a much larger scale than those built formerly, and, in most cases, of a better and more permanent type of construction. Indeed, much of the cost incurred between 1889 and 1910 was for the im-

provement of existing works, especially by the addition of reservoirs, which did not provide water for new lands, but rather provided a better supply for land already irrigated.

**Average cost per acre, by type of enterprise.**—Table 13 gives the average cost of irrigation enterprises per acre in 1910, computed in the three ways just shown, for each class of enterprises.

Table 13

AVERAGE COST OF IRRIGATION ENTERPRISES PER ACRE.

CLASS OF ENTERPRISE.	Based on cost to July 1, 1910, and acreage enterprises were capable of irrigating in 1910.		
	Based on cost to July 1, 1910, and acreage irrigated in 1909.	Based on estimated final cost and acreage included in projects.	
All classes	\$15.92	\$22.41	\$13.64
U. S. Reclamation Service	67.52	134.17	48.14
U. S. Indian Service	12.78	27.83	13.33
Carey Act enterprises	30.33	115.30	21.75
Irrigation districts	27.37	41.44	20.33
Cooperative enterprises	12.89	17.19	10.07
Individual and partnership enterprises	7.09	8.69	5.22
Commercial enterprises	24.98	41.71	16.79

The highest average cost per acre on each basis is shown for the United States Reclamation Service enterprises, and the next highest in each case for Carey Act enterprises. Irrigation districts ranked third and commercial enterprises fourth, except in one case where the order is reversed. These four classes comprise the large enterprises which are now engaged in developing new lands, and most of their work is of recent date. The works built by individuals or cooperative enterprises, which are smaller and were for the most part built at an earlier period, naturally utilized the sources from which water could be most readily diverted and transported to the land to be irrigated. The larger works of recent date serve land farther from the streams and involve better, more expensive, and more permanent construction, and as a result the average cost per acre is higher than that for the small works.

**Average cost per acre, by size groups.**—The average cost of irrigation works per acre for enterprises classified by size is shown in Table 14. The classification is based on the acreage intended ultimately to be irrigated.

It will be noted that in general the cost per acre irrigated increases with the size of enterprises. This condition is due at least in a considerable measure to the fact already noted that most of the larger enterprises, which are mainly of recent date, have had to seek water more difficult to obtain than that secured by the smaller enterprises, and that they represent a better type of work.

Table 14

	Total.	ENTERPRISES CONTAINING—

**Operation and maintenance.**—Table 15 gives the average cost per acre for the operation and maintenance of irrigation enterprises in 1909. The inquiry as to this item was not extended to individual and partnership enterprises, for the reason that farmers owning their own ditches usually clean and repair them at odd times without keeping any record of the time or money expended. In the case of some enterprises of other classes, no reports were received. The statistics for cost of operation reported at the two previous censuses, for various reasons, are not fairly comparable with those for 1909, and consequently are not shown in the table.

For the arid region as a whole, the average cost of operation and maintenance per acre irrigated was \$1.07. The abnormal cost shown for North Dakota (\$28.40) relates almost entirely to a single large project which supplied water in 1909 to only a small part of the acreage which it is designed to serve. The lowest average is for Oklahoma (\$0.51 per acre).

<sup>1</sup> Exclusive of enterprises supplying water for the irrigation of rice.

## CROPS.

The returns of crops grown on irrigated land, which were made by the regular enumerators of population and agriculture, are somewhat incomplete, for the reason that, owing to the late date at which the provisions of law regarding the irrigation census were passed, the enumerators could not be as carefully instructed regarding the special irrigation schedules as regarding the regular agricultural schedules. On many of the schedules the agricultural enumerators reported land as irrigated but failed to return separately the crops grown on such land. The total acreage of crops reported as raised on irrigated land formed 52.7 per cent of the total acreage irrigated in 1909; and while part of the remainder was doubtless in pasture, it is evident that part was in crops not reported as grown under irrigation and a part was probably in crops not harvested. Although the totals are thus incomplete, the returns are sufficiently accurate to afford reliable averages of yields and values and to show the relative importance of the various crops.

Table 16 gives, by states, the total acreage and total value of crops reported as irrigated in 1909, with the average value per acre.

Table 16

Wyoming.....	583,786	7,362,983	12.61

<sup>1</sup> Exclusive of rice.

The table shows for all crops reported as irrigated an average value per acre of \$25.08.

The highest average value per acre for crops raised on irrigated land is that for Washington, \$49.82, which

is followed by that for Texas, \$45.43 (exclusive of rice), and that for California, \$43.50. Wyoming showed the lowest average value per acre, \$12.61. As is to be expected, the average value per acre is highest in the states with large areas of fruits, vegetables, and other specialized crops raised by means of irrigation, while in those where forage crops and grains predominate the average is lower. Fruit crops comprised about 12 per cent of the total acreage of irrigated crops in Washington in 1909 and about 21 per cent of the total in California, and vegetables and other special crops about 21 per cent of the total acreage of irrigated crops in Texas, exclusive of rice. In Wyoming, on the other hand, more than 32 per cent of the total acreage of irrigated crops in 1909 was in wild grass, and irrigated fruit crops were insignificant.

Table 17 shows the reported acreage and value of each important irrigated crop in the arid region as a whole, with the percentage of the total represented by each.

All other.....	330,183	4.6	19,293,078	10.6

In acreage alfalfa ranked first, with 30.6 per cent of the total reported; "wild, salt, or prairie grasses" second, with 21.1 per cent; and oats third, with 10.2 per cent. Forage crops, taken together, occupied about 63 per cent of the total reported acreage, cereals about 23 per cent, sugar beets 2.5 per cent, potatoes 2.3 per cent, fruit crops about 5 per cent, and the crops such as vegetables, root forage, cotton, buckwheat, and others (grouped under the head "all other") 4.6 per cent.

In value also alfalfa was most important, representing 28 per cent of the total amount reported; but orchard fruits and grapes ranked second in this respect among the crops shown separately and tropical fruits third, notwithstanding the relatively small acreages in these crops.

Average yields per acre.—Table 18 shows for each of the leading crops grown on irrigated land the average yield per acre in comparison with the average yield of the same crop on unirrigated land in the United States as a whole. Yields for fruit crops are not given because of the large variety of units in which

these yields were expressed and because the general agricultural schedules do not show the acreage in these crops.

CROP.	AVERAGE YIELD PER ACRE.		EXCESS OF AVERAGE YIELD ON IRRIGATED LAND OVER THAT ON UNIRRIGATED LAND. <sup>1</sup>

<sup>1</sup> A minus sign (—) indicates that the yield on irrigated land is less than that on unirrigated land.

<sup>2</sup> Includes millet or Hungarian grass.

For each of the crops presented in the table except corn and "wild, salt, or prairie grasses," the average yield on irrigated land exceeds that on unirrigated land, the percentages of excess ranging from 18.7 for grains cut green to 67.3 per cent for wheat. As climatic conditions in the arid region are not favorable to corn, it is not grown to a large extent there. In the case of "wild, salt, or prairie grasses" the average yields on irrigated and unirrigated land are practically equal. A large part of the unirrigated wild grass is cut on river bottom lands where the soil is likely to be wet, even without irrigation, and consequently a difference in favor of irrigated land is not to be expected.

A combined average for all the crops listed in Table 18, each being given a weight corresponding to its acreage, shows an excess yield of 28.6 per cent for the crops grown on irrigated land over those grown on unirrigated land. It is, of course, obvious that this difference in no way represents the advantage of irrigation over nonirrigation. In some sections where rainfall is plentiful irrigation would add little to the yield, but in arid sections often little or nothing can be raised without irrigation.

Average values per acre.—The average values per acre of the leading irrigated crops reported for the arid region are shown in Table 19 in comparison with averages for the same crops grown on unirrigated land for the United States as a whole, so far as acreage figures are available for these.

Among crops grown on irrigated land in 1909, tropical fruits led in average value per acre by a wide margin, orchard fruits and grapes ranking second. Potatoes followed the fruit crops, with an average value of \$60.03, and sugar beets were next of the

crops shown separately, the average value being \$57.29 per acre. Alfalfa, the most important irrigated crop, had an average value per acre of \$22.94. In comparing the average values per acre for different crops it should be borne in mind that the crops with higher average values often require more expensive methods of cultivation than those with lower average values.

Table 19

CROP.	AVERAGE VALUE PER ACRE.		EXCESS OF AVERAGE VALUE FOR IRRIGATED LAND OVER THAT FOR UNIRRIGATED LAND.	
	On irrigated land, arid region.	On unirrigated land, entire United States.	Amount.	Per cent.

All other	58.43	( <sup>3</sup> )		

<sup>1</sup> Acreage not reported.

<sup>2</sup> Includes millet or Hungarian grass.

<sup>3</sup> Comparable figure not available.

Each of the crops shown in the table for which comparisons are made had a higher average value per acre for irrigated land than is shown for the same crop grown on unirrigated land for the United States. The excess in favor of the products raised on irrigated land, for the crops included in the comparison, ranged from 0.2 per cent for grains cut green to 63.2 per cent for oats. The average excess for irrigated crops for the crops for which comparative figures are given in the table, based on the total acreages and total values, is about 43 per cent. It should be noted that the comparison just made does not include the crops with the highest average values per acre, such as fruits and vegetables.

Comparison with preceding census.—According to the reports of the Twelfth Census the total acreage of irrigated crops in the arid and semiarid states was 5,932,557, while the acreage of such crops reported at the present census of irrigation was 7,241,561, which represents an increase of 22.1 per cent. The fact that this increase is much smaller than the increase in the acreage reported as irrigated (82.7 per cent) is a

further indication that the crop reports of the census of irrigation for 1910 are incomplete. Because of this incompleteness, the crop figures of the two censuses are not compared directly, but in Table 20 the percentage which the acreage in each irrigated crop formed of the total acreage reported in such crops is shown for the two censuses.

Table 20

CROP.	ACREAGE OF IRRIGATED CROPS.			
	1909		1899	
	Acreage.	Per cent of total.	Acreage.	Per cent of total.
Total reported	7,241,561	100.0	5,932,557	100.0

All other	946,639	13.1	1,285,679	21.7

<sup>1</sup> Includes millet or Hungarian grass.

From Table 20 it appears that at both censuses alfalfa was the leading crop grown under irrigation, but that it occupied a considerably larger proportion of the total acreage reported for irrigated crops in 1909 than in 1899. The crop next in importance in respect to acreage in both years was "wild, salt, or prairie grasses," which likewise comprised a larger percentage of the total in 1909 than in 1899. Oats was third in acreage in 1909, followed by wheat, while in 1899 wheat ranked third and oats fourth. Oats covered a much larger percentage of the total acreage of irrigated crops in 1909 than in 1899 and wheat a much smaller percentage in the later than in the earlier year.

The most notable relative increase was for sugar beets, the growing of this crop in the irrigated region being largely a development of the last decade. Potatoes also showed a marked increase in relative importance. Tropical and subtropical fruits occupied about the same place in the two censuses. From a comparison of Table 20 with Table 19, it will be seen that, with the exception of "wild, salt, or prairie grasses," the irrigated crops which are increasing in acreage most rapidly are all among the crops with relatively high values per acre.

#### IRRIGATION FOR RICE GROWING.

As previously stated, the special inquiry into irrigation for rice growing was confined to the rice growing districts of Louisiana, Texas, and Arkansas. The data collected, except those relating to crops, are summarized in Table 21.

The number of farms reporting irrigation for rice growing and the acreage irrigated, as reported at the

census of 1910, cover the year 1909, while all other data for that census relate to the year 1910. The reports of the agricultural census of 1910 show that 95.5 per cent of the entire acreage of rice harvested in 1909 was in the three states included in the special irrigation inquiry, and that in all the other states a marked decrease occurred between 1899 and 1909

in the acreage in rice. The figures given in the table for the census of 1910 represent, therefore, in a fairly adequate measure, the extent of irrigation for rice growing in the United States.

The acreage reported on the special irrigation schedules as irrigated for rice growing in 1909 is greater than the total acreage of rice reported in that year on the agricultural schedules for the territory covered. This difference is due principally to the fact that the irrigation schedules show the total acreage watered, while the agricultural schedules show only the acreage harvested. A considerable acreage planted in rice in 1909 was not harvested because of poor stand, shortage of water, and damage by storms.

Average cost per acre <sup>2</sup> .....	\$12.05	\$11.88	\$12.29	\$11.59

<sup>1</sup> Based on acreage enterprises were capable of irrigating in 1910.

<sup>2</sup> Based on acreage included in projects.

The total acreage irrigated for rice growing in the three states in 1909 was 694,800, of which 54.7 per cent was in Louisiana, 41.3 per cent in Texas, and 4 per cent in Arkansas. The enterprises which were completed or under way in 1910 were reported as capable of irrigating 950,706 acres in that year and of serving ultimately a total of 1,134,322 acres.

The total cost of irrigation enterprises to July 1, 1910, was \$13,587,639, or an average of \$14.29 per acre for the land to which they were capable of supplying water in 1910. Upon the basis of the acreage irrigated in 1909, the average cost per acre was \$19.56. The estimated total cost of enterprises completed or under way in 1910 was \$13,667,639, or \$12.05 per acre for the land included in these enterprises. From these figures it appears that the works for supplying water for rice irrigation which were under construction in 1910 were relatively insignificant.

In the report on irrigation for the Twelfth Census no information relating to the irrigation of rice in Arkan-

sas is given, because the rice growing industry in that state was insignificant in 1900.

In Table 22 comparisons are made for Louisiana and Texas for the few items that were reported at both censuses. The figures for the Twelfth Census relate to the year 1899.

<sup>3</sup> Not reported.

<sup>4</sup> Estimated.

<sup>5</sup> Based on cost to July 1, 1910, and acreage enterprises were capable of irrigating in 1910.

<sup>6</sup> Based on cost of systems operated in 1899, and acreage irrigated in that year.

<sup>7</sup> Figures not comparable. (See explanation in text.)

In Louisiana considerable increases have taken place since the census of 1900 in all the items shown in the table except number of farms. The large decrease in the number of farms reporting the irrigation of rice is probably due to the abandonment of rice growing on farms where only small acreages were planted, and an extension of the industry in sections where rice is grown on a larger scale. In Texas almost the entire development has taken place since 1899.

As the figures for average cost of irrigation enterprises per acre at the two censuses are not computed on the same basis, they are not comparable.

Although the crop returns for irrigated rice are not complete, they are sufficiently so to afford reliable averages of the yield and value per acre. These are shown in Table 23.

Continuous cropping in rice exhausts the soil, and the districts of Louisiana, where the land has been used for a longer time than in other sections, show the lowest average yield, while Arkansas, where the growing of rice is of comparatively recent date, shows the highest average yield.

# MANUFACTURES

CHAPTER 15.—STATISTICS FOR STATES, CITIES, AND INDUSTRIES

## CHAPTER 15.

# STATISTICS OF MANUFACTURES FOR STATES, CITIES, AND INDUSTRIES.

**Introduction.**—This chapter contains a summary of the statistics of manufactures for the United States for the calendar year 1909, as shown by the Thirteenth Census.

The principal facts derived from the census inquiry are presented in four general tables at the end of the chapter, the first giving statistics for individual industries, the second for states and territories, the third for each of the 25 leading manufacturing cities, and the fourth for each city of 10,000 or more inhabitants.

Table 110 gives for each industry in 1909, 1904, and 1899 the number of establishments; number of persons engaged in the industry during the year, classified as proprietors and firm members, salaried employees, and wage earners; primary power; capital; salaries; wages; cost of materials; value of products; value added by manufacture; and the percentage of increase in average number of wage earners and in value of products, from census to census. The industries are arranged alphabetically.

Table 111 gives similar statistics for the different states and territories, arranged geographically.

Table 112 gives for each of the 25 leading manufacturing cities the same items given in Tables 110 and 111; the cities are arranged according to the value of their manufactured products.

Table 113 gives, for each city of 10,000 or more inhabitants, the number of establishments, the average number of wage earners, the value of products, and the value added by manufacture for 1909, 1904, and 1899. The cities are arranged alphabetically by states.

In addition to these general tables there are interspersed in the text discussion a series of special text tables analyzing certain of the data contained in the general tables. Some of these special text tables present figures only for all industries combined in continental United States as a whole; others give statistics for the principal industries separately; and still others give figures for states and territories.

**Scope of census: Factory industries.**—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of organization, location of establishments, size of establishments, labor force, and similar subjects. When use is made of the data for these purposes it is imperative that due attention should be given

to the limitations of the figures. Particularly is this true when the attempt is made to derive from them figures purporting to show average wages, cost of production, or profits.

The census of 1909, like that of 1904, was confined to manufacturing establishments conducted under the factory system, as distinguished from the neighborhood, hand, and building industries. Where statistics for 1899 are given they have been reduced to a comparable basis by eliminating, as far as possible, the latter classes of industries. The census does not include establishments which were idle during the entire year, or had a value of products of less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions, or in governmental establishments, except those of the Federal Government.

**Period covered.**—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for establishments which began or discontinued business during the year.

**The establishment.**—As a rule, the term "establishment" represents a separated plant or mill. In some cases it represents two or more plants operated under a common ownership or for which one set of books of account is kept.

If the plants constituting an establishment as thus defined were not all located within the same city or state, separate reports were secured in order that the separate totals might be included in the statistics for each city or state. In some instances separate reports were secured for different industries carried on in the same establishment.

**Classification by industries.**—The establishments were assigned to the several classes of industries according to their products of chief value. The value of products reported for a given industry may thus, on the one hand, include minor products very different from those covered by the class designation, and, on the other hand, may not include the total product covered by this designation, because some part of this product may be made in establishments in which it is not the product of chief value.

The number of industries for which a separate presentation is made is 264, a much smaller number than in the reports for the census of 1904, in which 339 industries were shown separately. This decrease is due to the fact that an attempt to make a separate presentation would in the case of many industries be misleading, inasmuch as a large part of the product of the class described by the industry designation is made, not by establishments engaged primarily in manufacturing that class of commodities, but by establishments whose principal product is such as to necessitate their classification elsewhere. In order to avoid this difficulty it is necessary in many cases to combine a number of closely related industries under a more general designation. This condition is constantly becoming more conspicuous in the manufacturing business of the country, and consequently the number of industries which can properly be shown separately is smaller at this census than at previous censuses.

Owing to changes in industrial conditions, moreover, it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses, and for some of the industries covered by Table 110, therefore, comparative statistics for earlier censuses are necessarily omitted.

## VALUE OF PRODUCTS, BY INDUSTRIES: 1909 AND 1899.

## GENERAL SUMMARY.

**Continental United States and noncontiguous territory: 1909.**—The following table gives for 1909 the more important figures for the manufactures of continental United States and for Alaska, Hawaii, and Porto Rico. The table does not cover possessions of the United States other than those mentioned. The statistics of manufactures included in the census of the Philippine Islands taken by the War Department for

1902 are not comparable with those shown in the reports for continental United States; and there has been no census of manufactures in Guam, Samoa, or the Canal Zone. The statistics for Alaska, Hawaii, and Porto Rico include some small establishments of the nature of hand or neighborhood industries, such as are omitted from the canvass for continental United States.

Table 1	NUMBER OR AMOUNT.				
	Total.	Continental United States.	Alaska.	Hawaii.	Porto Rico.
Number of establishments.....	270, 082	268, 491	152	500	939
Persons engaged in manufactures.....	7, 707, 751	7, 678, 578	3, 479	7, 572	18, 122
Proprietors and firm members.....	275, 952	273, 265	135	1, 074	1, 478
Salaried employees.....	792, 168	790, 267	245	594	1, 062
Wage earners (average number).....	6, 639, 931	6, 615, 046	3, 099	5, 904	15, 582
Primary horsepower.....	18, 755, 286	18, 675, 376	3, 975	41, 930	34, 005
Capital.....	\$18, 490, 749, 000	\$18, 428, 270, 000	\$13, 060, 000	\$23, 875, 000	\$25, 544, 000
Expenses.....	18, 526, 436, 000	18, 454, 090, 000	9, 454, 000	31, 753, 000	31, 139, 000
Services.....	4, 375, 634, 000	4, 365, 613, 000	2, 328, 000	2, 795, 000	4, 898, 000
Salaries.....	940, 000, 000	938, 575, 000	380, 000	686, 000	1, 259, 000
Wages.....	3, 434, 734, 000	3, 427, 038, 000	1, 948, 000	2, 109, 000	3, 639, 000
Materials.....	12, 105, 019, 000	12, 142, 791, 000	5, 120, 000	25, 629, 000	21, 479, 000
Miscellaneous.....	1, 955, 783, 000	1, 945, 686, 000	2, 006, 000	3, 329, 000	4, 762, 000
Value of products.....	20, 767, 546, 000	20, 672, 052, 000	11, 340, 000	47, 404, 000	36, 750, 000
Value added by manufacture (value of products less cost of materials).....	8, 572, 527, 000	8, 529, 261, 000	6, 220, 000	21, 775, 000	15, 271, 000

The total value of manufactures in the area covered by this table for 1909 was \$20,767,546,000, of which 99.5 per cent was contributed by continental United States, the manufactures of Alaska, Hawaii, and Porto Rico being comparatively unimportant. The most important industry in Alaska is the canning and preserving of fish; in Hawaii, the manufacture of sugar; and in Porto Rico, the manufacture of sugar and of tobacco products.

The above table is the only one in this report in which the statistics for the noncontiguous territories are included, all the other tables relating exclusively to continental United States.

**Explanation of terms.**—With reference to some of the items contained in the above and following tables certain explanations are necessary:

**Persons engaged in manufacturing industries.**—The statistics of the number of proprietors and firm members and the number of salaried employees are based on the returns for a single representative day only. In the case of wage earners a report was obtained of the number employed on the 15th of each month, and from these returns the average number employed during the year has been calculated by dividing the sum of the numbers reported for the several months by 12. (See also p. 452.)

**Capital.**—For reasons stated in reports of prior censuses the statistics of capital secured by the census canvass are so defective as to be of little value, except as indicating very general conditions. The instructions on the schedule for securing capital were as follows:

The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All

the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises.

**Materials.**—The statistics as to cost of materials relate to the materials used during the year, which may be more or less than the materials purchased during the year. The term "materials" includes fuel, rent of power and heat, mill supplies, and containers, as well as materials forming a constituent part of the product. Under the head of "fuel" is included all fuel used, whether for heat, light, or power, or for the process of manufacture.

**Expenses.**—Under "Expenses" are included all items of expense incident to the year's business, except interest, whether on bonds or other forms of indebtedness, and allowances for depreciation.

**Value of products.**—The amounts given under this head represent the selling value at the factory of all products manufactured during the year, which may differ from the value of the products sold. Amounts received for work on materials furnished by others are included.

**Cost of manufacture and profits.**—Census data do not show the entire cost of manufacture, and consequently can not be used to show profits. No account has been taken of interest and depreciation. Even if the amount of profit could be determined by deducting the expenses from the value of the products the rate of profit on the investment could not properly be calculated, because of the very defective character of the returns regarding capital.

**Primary horsepower.**—This item represents the total primary power generated by the manufacturing establishments plus the amount of power, principally electric, rented by them from other concerns. It does not cover the electric power developed by the primary power of the establishments themselves, the inclusion of which would evidently result in duplication.

**General comparison for the United States: 1909, 1904, and 1899.**—The following table gives the principal items of information covered by census inquiries

relative to manufactures in continental United States for 1909, 1904, and 1899, together with the percentages of increase from census to census:

Table 2.	NUMBER OR AMOUNT.			PER CENT OF INCREASE.	
	1909	1904	1899	1904-1909	1899-1904
Number of establishments.....	268,491	216,180	207,514	24.2	4.2
Persons engaged in manufactures.....	7,678,578	6,213,612	(1)	23.6	.....
Proprietors and firm members.....	278,965	225,673	(1)	21.1	.....
Salaries and employees.....	790,267	519,556	364,120	52.1	42.7
Wage earners—average number.....	6,615,046	5,468,383	4,712,763	21.0	16.0
Primary horsepower.....	18,678,578	13,487,707	10,097,893	38.5	33.6
Capital.....	\$18,498,270,000	\$12,675,385,000	\$8,975,556,000	45.4	41.2
Expenses.....	18,494,000,000	13,388,260,000	9,870,422,000	40.5	35.1
Services.....	4,365,613,000	3,184,884,000	2,389,132,000	37.1	38.3
Salaries.....	968,575,000	574,439,000	380,771,000	63.4	50.9
Wages.....	3,407,038,000	2,610,445,000	2,008,361,000	31.3	30.0
Materials.....	12,042,594,000	8,900,008,000	6,577,851,000	42.9	29.3
Miscellaneous.....	1,098,888,000	1,403,888,000	903,442,000	38.9	60.5
Value of products.....	20,672,052,000	14,386,263,000	11,406,927,000	39.7	29.7
Value added by manufacture, or value of products less cost of materials.....	\$3,329,261,000	\$5,296,696,000	\$4,831,076,000	35.5	30.3

(1) Figure not available.

In 1909 the United States had 268,491 manufacturing establishments, which gave employment during the year to an average of 7,678,578 persons, of whom 6,615,046 were wage earners. These manufacturing establishments paid \$4,365,613,000 in salaries and wages, and turned out products to the value of \$20,672,052,000, to produce which materials costing \$12,042,594,000 were consumed. The value added by manufacture, namely, the difference between the cost of materials and the total value of products, was \$3,329,261,000. This figure best represents the net output created by manufacturing operations, because the gross value of products includes the cost of the materials used, which are either the products of non-manufacturing industries, such as agriculture, forestry, fisheries, and mining or else are themselves the product of manufacturing establishments. The value of products derived from this latter class of materials involves a duplication, inasmuch as the value of these materials has already figured in the value of products reported for the establishments manufacturing them; in the best instance, in some cases, indeed, where a given product has passed through several distinct stages of manufacture in different establishments before reaching its final form, this duplication may be repeated several times. All such duplications, as well as the original value of materials, are, however, eliminated in the figures for value added by manufacture. This value covers salaries and wages—which represent over one-half of the total—overhead charges, depreciation, interest, taxes, and other expenses attendant upon the manufacturing operations, as well as the profits of the undertaking.

Table 2 shows that the manufacturing industries of the United States as a whole experienced a more rapid growth during the five-year period 1904-1909

than during the period 1899-1904, although in both periods the progress was very marked. During the first five years of the decade the average number of wage earners increased 16 per cent; during the second five years, 21 per cent. The value of products increased 29.7 per cent during the first period and 39.7 per cent during the second period. The rate of increase in the value added by manufacture shows less difference between the two periods, being 30.3 per cent during the first five years and 35.5 per cent during the second five years. In this connection it may be noted that there was a greater rate of increase in the cost of materials during the second period than during the first.

During the 10 years from 1899 to 1909 the number of establishments increased 29.4 per cent; the capital employed, 105.3 per cent; the average number of wage earners, 40.4 per cent; the amount of primary power, 84.9 per cent; the value of materials consumed, 84.7 per cent; the value of products, 81.2 per cent; and the value added by manufacture, 76.6 per cent. The gross value of products in 1909 exceeded that in 1899 by more than \$9,000,000,000, and the value added by manufacture in 1909 was, in round numbers, \$3,700,000,000 more than in 1899.

It would be improper to infer that manufactures increased in volume during either of the five-year periods covered by the table to the full extent indicated by the increase in value of materials consumed or in the value of products, since the increase shown in these items is certainly due in part to the increase that has taken place in the price of commodities. It may be presumed that the quantity of products increased somewhat more rapidly than the number of wage earners; this might be expected from the fact that the amount of primary power increased much faster than the number of wage earners; in

other words, each wage earner, on the average, had greater assistance from mechanical power in 1909 than in 1904 or 1899.

It is a matter of interest to note that during both of the five-year periods the wages paid showed a higher percentage of increase than the average number of wage earners, thus indicating an increase in the average wages.

**Comparison with earlier censuses.**—In 1810 the Secretary of the Treasury made a report on the condition of manufactures in the United States and estimated that the value of products for 1809 exceeded \$120,000,000. An estimate based on the returns of the census of 1810 placed the value of the annual product at \$198,613,471. Further efforts to secure statistics of manufactures were made in 1820 and 1840, but the results were more or less unsatisfactory. In 1830 no such attempt was made. The census of 1850 was the first to present fairly complete statistics for manufactures. Each census from that time to 1890 was based in part on returns for the preceding calendar year and in part on returns for other 12-month periods, mainly ending during the census year itself. The last three censuses cover principally returns for the preceding calendar year or for 12-month periods ending within that year. In general, in this report the statistics for all censuses are referred to by the year preceding that in which the census was taken.

The statistics of manufactures secured at the decennial censuses from 1850 to 1900, inclusive, covered the neighborhood, hand, and building industries; as well as the factory industries, while the reports for 1904 and 1909 were confined to factory industries. The statistics for 1899 obtained at the decennial census of 1900, although originally taken on the broader basis, have, for the purpose of comparison with later censuses, been reduced to the factory basis by eliminating as far as possible the neighborhood, hand, and building trades, but no such elimination is possible with respect to the earlier censuses. For this reason the statistics for years prior to 1899 are not entirely comparable with those for 1904 and 1909. Nevertheless, for the purpose of showing in a rough way the movement during each decade since 1850, the following summary table is presented. Two sets of figures are given in this table for 1899, the one including the neighborhood, hand, and building trades, in order to make the data comparable with those for preceding censuses, and the other excluding them in order to make the figures comparable with those for later censuses. The values and wages for 1869 have been reduced to a gold basis, inasmuch as the figures as reported would, because of the inflation of the currency at that time, exaggerate the increase from 1859 to 1869, and understate the increase from 1869 to 1879.

Table 3

	Number of establishments.	Capital.	Wage earners (average number).	Wages.	Cost of materials.	Value of products.	Value added by manufacture.
<b>Factories and hand and neighborhood industries:</b>							
1849 (census of 1850).....	123, 025	\$533, 245, 000	957, 059	\$236, 755, 000	\$555, 124, 000	\$1, 019, 107, 000	\$463, 983, 000
1859 (census of 1860).....	140, 423	1, 009, 856, 000	1, 311, 246	378, 879, 000	1, 031, 605, 000	1, 885, 862, 000	854, 257, 000
Per cent of increase, 1849 to 1859.....	14.1	89.4	37.0	60.0	85.8	85.0	84.1
1869 (census of 1870) (gold value).....	252, 148	1, 694, 567, 000	2, 053, 996	620, 467, 000	1, 990, 742, 000	3, 385, 860, 000	1, 395, 118, 000
Per cent of increase, 1859 to 1869.....	79.6	67.8	56.6	63.8	93.0	79.5	63.3
1879 (census of 1880).....	253, 852	2, 790, 273, 000	2, 732, 595	947, 954, 000	3, 396, 824, 000	5, 369, 579, 000	1, 972, 755, 000
Per cent of increase, 1869 to 1879.....	0.7	64.7	33.0	52.8	90.6	74.5	41.4
1889 (census of 1890).....	355, 405	6, 525, 051, 000	4, 251, 535	1, 891, 210, 000	5, 162, 014, 000	9, 372, 379, 000	4, 210, 365, 000
Per cent of increase, 1879 to 1889.....	40.0	133.8	55.6	99.5	52.0	74.5	113.4
1899 (census of 1900).....	512, 191	9, 813, 834, 000	5, 306, 143	2, 320, 938, 000	7, 343, 628, 000	13, 000, 149, 000	5, 656, 521, 000
Per cent of increase, 1889 to 1899.....	44.1	50.4	24.8	22.7	42.3	38.7	34.3
<b>Factories, excluding hand and neighborhood industries:</b>							
1899 (census of 1900).....	207, 514	8, 975, 256, 000	4, 712, 763	2, 008, 361, 000	6, 575, 851, 000	11, 406, 927, 000	4, 831, 076, 000
1904 (census of 1905).....	216, 180	12, 675, 581, 000	5, 468, 383	2, 610, 445, 000	8, 600, 208, 000	14, 793, 903, 000	6, 293, 695, 000
Per cent of increase, 1899 to 1904.....	4.2	41.2	16.0	30.0	29.3	29.7	30.3
1909 (census of 1910).....	268, 491	18, 428, 270, 000	6, 615, 046	3, 427, 038, 000	12, 142, 791, 000	20, 672, 052, 000	8, 529, 261, 000
Per cent of increase, 1904 to 1909.....	24.2	45.4	21.0	51.3	42.9	39.7	35.5
Per cent of increase, 1899 to 1909.....	29.4	105.3	40.4	70.6	84.7	81.2	76.6

This table shows that, although the returns for 1849 included neighborhood, hand, and building trades and those for 1909 did not, nevertheless the value of products in the latter year was over twenty times as great as the value reported 60 years before. During the same time the number of wage earners employed increased almost sixfold.

As judged by the number of wage earners, the decade showing the greatest percentage of increase was that from 1859 to 1869, during which the average number of wage earners increased 56.6 per cent. The decade 1879

to 1889 also showed an exceptionally high percentage of increase in this respect, while the next largest percentage of increase occurred during the decade from 1899 to 1909. As respects value of products, the percentage of increase during the past decade exceeds that in any other except the decade from 1849 to 1859; but in value added by manufacture, the percentage of increase during the past 10 years falls below that from 1879 to 1889, as well as that from 1849 to 1859.

The absolute increases shown for the various items covered by the table during the decade 1899 to 1909

were much greater than during any other decade; the increase in value of products, in fact, almost equaled the total value of all manufactured products in 1889.

**Leading industries.**—The relative importance of the leading manufacturing industries in the United States in 1909 and their growth from 1899 to 1909 are shown in Table 4, which includes the industries having a gross value of products in 1909 of \$100,000,000 or more. The industries are arranged in the order of the value of products. The table also shows the rank of the industries listed, not only with respect to value of products, but with respect to number of wage earners employed and value added by manufacture, and the percentage of the total of each of these items for all industries combined which is represented by each specified industry. While the column of rank under "Value of products" represents correctly the order of the industries named among all the industries of the country, the ranking shown with reference to number of wage earners and value added by manufacture relates only to the relative order of the industries covered by this particular table. There are various industries not named which rank higher in these respects than some of the industries listed in the table.

The number of wage earners and the value added by manufacture are, at least from certain standpoints, a better measure of the relative importance of manufacturing industries than the gross value of products. In some industries the value of the materials used constitutes by far the larger part of the total value of products, the manufacturing process involving the addition of only a small amount of labor cost and other expenses and of manufacturer's profit to the cost of the materials. Moreover, in some of the industries there is a much greater duplication in the gross value of products than in others. This duplication, of course, does not appear in the value added by manufacture.

In considering the ranking of the industries in Table 4, it should be borne in mind that some of the industries specified are in a sense groups of industries rather than single industries. As stated in the Introduction, in certain cases, in order to avoid a misleading understatement of the importance of the production of a given minor class of commodities, the returns for establishments making these commodities as their sole or principal product have had to be combined with those of establishments in larger industries which produce primarily other commodities, but which incidentally make a large part of the distinctive products in question. In a few instances where a similar condition exists, however, it was deemed best not to make such a combination of industries. As also stated in the Introduction, the report for each establishment, as a whole, has been assigned to a given class of industry according to its products of chief value, so that the figures for any given class must not be taken either as fully covering or as represent-

ing exclusively the operations of that branch of manufacturing indicated by the industry designation.

The following explanations show the scope of those classifications in the table which are not on their face entirely clear:

**Slaughtering and meat packing.**—This classification includes the wholesale slaughtering and meat-packing establishments and those engaged in the manufacture of sausage, but not the numerous retail butcher shops which in the aggregate slaughter a large number of animals. It includes the manufacture of many by-products, some of which are carried to a high degree of elaboration.

**Foundry and machine-shop products.**—This industry includes all allied industries excepting those which manufacture a distinctive product indicated by some other classification, such as cash registers, calculating machines, sewing machines, and electrical machinery. The establishments engaged in the manufacture of bells, gas machines and gas and water meters, hardware, plumbers' supplies, saddlery hardware, steam fittings, structural ironwork, and cast-iron and cast-steel pipe, some of which were reported under separate classifications at previous censuses, are all included under this general heading.

**Lumber and timber products.**—This industry embraces logging operations, ordinary sawmills, planing mills, and establishments engaged in the manufacture of wooden packing boxes. It does not include statistics of mills engaged exclusively in custom sawing for local consumption.

**Iron and steel, steel works and rolling mills.**—This industry embraces the manufacture of steel and the hot rolling of iron and steel. It also includes the making of forgings and castings and the manufacture of rolled iron and steel into more highly finished forms when conducted as a part of the rolling-mill operations, as well as the few extant forges and bloomeries. It does not, however, include the making of cold-rolled products, nor of forgings, castings, and manufactures of iron and steel by establishments not equipped with steel-making furnaces or hot trains of rolls.

**Flour-mill and gristmill products.**—This classification includes statistics for all mills grinding wheat, rye, or buckwheat flour, or corn meal, hominy, grits, or feed, but it does not include statistics for mills doing custom grinding exclusively, or for factories making fancy cereal food or other special food preparations as a chief product.

**Printing and publishing.**—This classification includes job-printing establishments, the printing and publishing of books, newspapers and periodicals, and music, bookbinding, steel engraving, and lithographing.

**Cotton goods, including cotton small wares.**—In addition to the statistics for cotton mills proper, there are included under this head the statistics for establishments that make a specialty of small wares, such as

braids, tapes, bindings, corset and shoe laces, and the like.

*Clothing, men's, including shirts.*—This classification includes the making of men's and boys' ready-made clothing; the making of overalls, butchers' aprons, bathing suits, and gymnasium clothing; and the manufacture of all kinds of shirts—cotton, linen, flannel, etc.—as well as shirt bosoms and shirt waists for men and boys.

*Boots and shoes, including cut stock and findings.*—Under this head are included not only factories making the finished product, but those doing the whole or part of the work on materials furnished by others, as well as shops doing stitching, crimping, fitting, and bottoming, or performing other special operations. The manufacture of footwear not coming strictly under the head of boots and shoes, such as overgaiters, moccasins, and leggings, is also covered by this designation. It does not include the manufacture of rubber boots and shoes.

*Clothing, women's.*—Besides the making of suits, dresses, skirts, and shirt waists, this industry includes the manufacture of women's underwear and night robes, of infants' clothing, and of such articles as aprons, linings, belts, dress shields, and hose supporters.

*Sugar and molasses, not including beet sugar.*—Under this classification are included the manufacture of sugar and of some by-products of the sugar industry, such as molasses and sirup, and also the operations of sugar refineries, together with the manufacture of maple sugar. It does not, however, include the small plantation or custom sugar mills.

*Furniture and refrigerators.*—This industry embraces the manufacture of wood and metal furniture of all kinds, store and office fixtures, and refrigerators and ice boxes, except where such products are provided for by a distinct classification, such as show cases.

*Copper, tin, and sheet-iron products.*—This classification comprises the manufacture of sheet-metal products of copper, tin, and iron, including the preparation of copper, tin, or sheet-iron material for building construction. It includes the factory work on cornices, skylights, roofing, etc., but does not include the erection or installation of the same.

*Canning and preserving.*—This industry includes the canning and preserving of fruits and vegetables, fish, oysters, clams, etc., and the manufacture of pickles, preserves, jellies, sauces, etc. It includes the preparation of pickled, smoked, and dried fish, and the packing of dried fruits by packing houses which make a specialty of such business, but does not include the drying and packing of fruits by the grower on the farm, nor does it include the canning of meats, soups, and similar products in meat-packing establishments, the statistics for which are included with those for the slaughtering and meat-packing industry.

*Patent medicines and compounds and druggists' preparations.*—Under this head are included establishments making so-called patent medicines, and also some compounds that are not used for medicinal purposes, and the manufacture of capsules, extracts, tinctures, and other pharmaceutical preparations, together with perfumery and cosmetics.

*Chemicals.*—This classification includes establishments engaged primarily in the manufacture of acids, sodas, potashes, alums, coal-tar products, cyanides, bleaching materials, plastics, compressed or liquefied gases, alkaloids, gold, silver, and platinum salts, chloroform, ether, and other fine chemicals, glycerin, epsom salts, copperas, blue vitriol, and other bases and salts, when they are made as a chief product by the establishment reporting. Chemical substances produced by the aid of electricity are presented in a group by themselves. Chemicals of the class above specified are frequently manufactured as by-products by establishments classified in the census reports under a different head, for example, by establishments making patent medicines and compounds and druggists' preparations, soap, fertilizers, baking powders, and flavoring extracts; by refiners of coal tar for use as roofing material; by smelters and refiners of lead and zinc; and by establishments engaged in the manufacture of sulphuric, nitric, and mixed acids and of explosives, in wood distillation, and in making tin and terne plate.

It will be seen from Table 4 that some of the industries that hold a very high rank in gross value of products rank comparatively low in the number of wage earners employed and in the value added by manufacture. Where this is the case it indicates that the cost of materials represents a large proportion of the total value of products, and that therefore the value added by manufacture, of which wages constitute usually the largest item, is not commensurate with the total value of products. Thus the slaughtering and meat-packing industry, which ranks first in gross value of products, and the flour-mill and gristmill industry, which ranks fifth in that respect, both hold a comparatively low rank with regard to number of wage earners and value added by manufacture. The blast-furnace industry, the smelting and refining of copper, the manufacture and refining of sugar and molasses, the manufacture of butter, cheese, and condensed milk, the refining of petroleum, and the smelting and refining of lead are other industries which rank much higher in gross value of products than in the number of wage earners or the value added by manufacture.

There are several industries the rank of which according to the number of wage earners and the value added by manufacture is decidedly higher than the rank according to value of products; in other words, the cost of materials is relatively a smaller part of the total value of products for these industries than for

most others. Among the industries of this class are the making of women's clothing, the manufacture of automobiles, furniture, electrical machinery, apparatus, and supplies, hosiery and knit goods, silk goods, and agricultural implements, and the confectionery and marble and stone work industries.

The foundry and machine-shop industry, the lumber industry, the steel works and rolling mills, the printing and publishing industry, the manufacture of cotton goods, of men's clothing, and of boots and shoes all rank among the first 10 industries in the table on

each of the three bases shown in the table. The figures for both value of products and value added by manufacture in the case of the brewery and distillery industries include a very large amount of tax paid to the Federal Government, and are therefore misleading as an indication of the relative importance of these industries from a purely manufacturing standpoint. That importance is best shown by their ranking in number of wage earners; in this respect the brewery industry ranks twenty-fifth among the industries listed, and the distillery industry forty-third.

<sup>1</sup> Per cent of increase is based on figures in Table 110. A minus sign (—) denotes decrease.

The table shows very great differences among the several industries with respect to the percentages of increase in the number of wage earners, value of products, and value added by manufacture. The great majority of the industries, however, show an

increase in each of these items for each of the five-year periods, the exceptions being the sugar industry and the smelting and refining of lead, which show a decrease in one or more items for each five-year period; the refining of petroleum, which shows a

PER CENT DISTRIBUTION OF VALUE OF PRODUCTS,  
BY INDUSTRIES: 1909.

decrease in one item, and the manufacture of carriages and wagons, which shows a decrease in two items, for the period 1904 to 1909; and the blast-furnace industry and the canning and preserving industry, which show a decrease in one item each during the period 1899 to 1904.

By far the highest percentages of increase are shown for the automobile industry, the gross value of products of which increased more than sevenfold during the five years 1904 to 1909, and more than fiftyfold during the decade as a whole. Other industries which show exceptionally large increases for both five-year periods in all three items are the making of men's and of women's clothing, the bakery and the butter, cheese, and condensed-milk industries, the manufacture of electrical machinery, apparatus, and supplies, and of copper, tin, and sheet-iron products, the distillery industry, the manufacture of hosiery and knit goods and of silk and silk goods, the illuminating-gas industry, the manufacture of brass and bronze products, and the confectionery, paint and varnish, and marble and stone work industries. It is interesting to note that the group of "all other industries," which in-

PER CENT DISTRIBUTION OF AVERAGE NUMBER OF  
WAGE EARNERS, BY INDUSTRIES: 1909.

cludes the less important industries of the country, shows greater percentages of increase than all industries combined, thus indicating possibly an increased tendency toward diversification in manufacturing industries.

The percentage of increase in all three of the items—number of wage earners, gross value of products, and value added by manufacture—was greater during the second five-year period (1904 to 1909) than during the first (1899 to 1904) in the slaughtering and meat-packing and foundry and machine-shop industries, the manufacture of cotton goods, the men's clothing, boot and shoe, and woollen-goods industries, the smelting and refining of copper, the manufacture of automobiles, silk and silk goods, brass and bronze products, agricultural implements, and paint and varnish, the steel works and rolling mills, and the chemical industry. On the other hand, the percentage of increase in all three items was less during the later five-year period than during the earlier in the flour-mill and gristmill, railroad repair shop, bakery, women's clothing, paper and wood pulp, petroleum refining, furniture, illuminating gas, carriage and wagon, and leather-goods industries.

In all the other industries covered by the table the increases during the second period are in some items greater than during the first period, while in other items they are less, or else the industry shows a decrease during one or both periods.

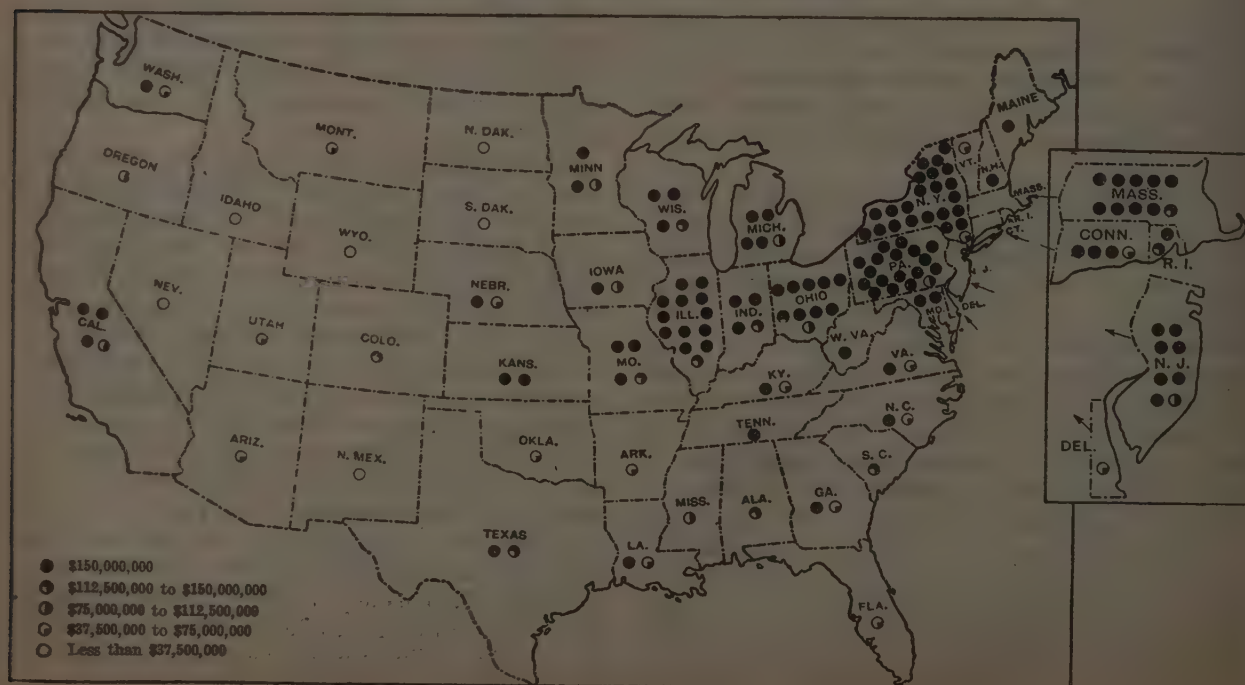

In considering the relative importance of the industries shown in Table 110 and not included in Table 4, it should be noted that there are several industries listed the figures given for which fall far short of being a complete presentation of the statistics for that branch of manufactures covered by the industry designation, for the reason that they cover only establishments engaged primarily in manufacturing the class of products indicated by this designation, while large quantities of the same products are manufactured incidentally by establishments classified under other heads. Some conspicuous examples are the manufacture of glue, candles, lard, and fertilizers, and the dyeing and finishing of textiles. A large proportion of the glue, lard, and fertilizers are manufactured by slaughtering and meat-packing establishments, and quantities of fertilizers are also made in cottonseed-oil mills. The dyeing and finishing of textiles is done largely in the establishments that manufacture the fabric. Candles are manufactured in establishments classified under the head of "soap" and in those engaged in the manufacture of petroleum products. For reasons of this character the roasting and grinding of coffee and spice, and the manufacture of fertilizers, food preparations, and rubber goods, and the soap industry, for each of which products valued at over \$100,000,000 were reported, are not shown in Table 4.

**Summary by states and geographic divisions.**—Table 5 on the next page shows, for each state, the population, also the number of wage earners, value of products, and value added by manufacture in 1909, together with the rank of the state with respect to each of these items and the percentage of the total reported from each state. It also shows the percentage of increase with respect to each of these three items from 1904 to 1909 and from 1899 to 1904, respectively. The states are arranged in the order of their rank with respect to value of products.

The first seven states in respect to value of products are also the first seven in respect to number of wage earners and value added by manufacture. Each of these seven states has the same rank in all three respects except that Illinois, which is third in value of products and value added by manufacture, ranks fourth in number of wage earners, Massachusetts advancing to third place. These seven states together reported over three-fifths of the total value of manufactured products for the United States.

Most of the other states show approximately the same rank in each of the three items, but there are several states in which, because of the large proportion which the cost of materials represents of the total value of products, the rank according to value of products is materially higher than that in number of wage earners or in value added by manufacture. This is particularly true of states in which the flour-mill and slaughtering industries are the most important. The most noteworthy case of this character is Kansas, which ranks four-

VALUE OF PRODUCTS OF MANUFACTURES: 1909.

teenth in value of products, but only thirty-third in number of wage earners and twenty-eighth in value added by manufacture.

With only one exception all of the states show an increase in each of the three items from 1904 to 1909; in Montana, however, the value added by manufacture shows a decrease for this period, due largely to merely technical differences in methods of accounting in the smelting industry, which is the principal one in that state. A few of the states showed a decrease in one or more items for the period 1899 to 1904.

The greatest percentages of increase are naturally in those states in which the development of manufacturing industries is comparatively recent. Thus Texas, Washington, Oregon, Utah, Oklahoma, Idaho, North Dakota, and Nevada show exceptionally high rates of increase for both five-year periods. Among the 10 states which are most important in manufacturing the most conspicuous advances are in Ohio, New Jersey, and Michigan. The absolute increase, as distinguished from the percentage of increase, was greater in New York, the leading manufacturing state, than in any other state.

<sup>1</sup> Per cent of increase is based on figures in Table 111. A minus sign (-) denotes decrease.

<sup>2</sup> Less than one-tenth of 1 per cent.

Table 6, on page 448, presents similar data for the nine grand geographic divisions of the United States, arranged in the order of their rank in value of products. The states included in each division are shown in Table 111.

The three Middle Atlantic states—New York, New Jersey, and Pennsylvania—together reported more than one-third of the total value of manufactured products

for the country; the East North Central states, about one-fourth; and the New England states, somewhat over one-eighth. These three divisions together contributed 72.6 per cent of the total value of manufactured products in 1909; they showed, however, somewhat lower percentages of increase during the past decade than the other divisions, in which manufacturing is of more recent development.

## VALUE OF PRODUCTS OF MANUFACTURES, BY STATES: 1909 AND 1899.

AVERAGE NUMBER OF WAGE EARNERS, BY STATES: 1909 AND 1899.

**Summary for 50 leading cities: 1909.**—Table 7 presents, for the 50 cities which stand highest in value of manufactured products, arranged in order of rank, data similar to those presented for the geographic divisions in Table 6. It should be particularly noted in considering this table that the figures relate only to the manufacturing establishments situated actually within the boundaries of the several cities.

In the case of practically every city listed there are important manufacturing establishments in the immediate vicinity, and in the case of several of the cities such outside establishments, which virtually constitute a part of the city's industrial interests, have a greater value of products than those within the city itself. The most notable instances of this character are Pittsburgh and Boston, which would rank decidedly higher in a table based on metropolitan or industrial districts than they do in the table for cities proper. While the population of Pittsburgh proper is 533,905, the population of the metropolitan district of Pittsburgh, as defined by the Census Bureau, is 1,042,855. Similarly, the population of the Boston metropolitan district is 1,520,470, as compared with 670,585 for the city proper. Further details regarding the manufactures of the 25 leading cities are given in Table 112.

The rank of the cities of the country with respect to manufactures is in many cases decidedly different from their rank in population. Thus Boston ranks fifth in population, but eighth in value of manufactured products; Baltimore, seventh in population, but thirteenth in value of manufactured products; and Los Angeles, sixteenth in population, but thirty-second in value of products. Kansas City, Kans., on the other hand, by reason of the large slaughtering establishments there, ranks fifteenth in value of manufactured products, but is not among the 50 principal cities from the standpoint of population. Of the 50 cities in the United States which have over 100,000 inhabitants, 14 are not included among the 50 cities having the largest value of manufactures.

In the case of some of the cities listed in the table, the rank with respect to the number of wage earners and the value added by manufacture is very different from that with respect to the gross value of products, these differences being dependent upon the character of the predominating industries. It is noteworthy, however, that the 13 cities which rank highest in gross value of products are also the 13 which occupy the highest rank with respect to wage earners and value added by manufacture, although considered individually these cities do not in all cases hold the same rank in each of the three respects. Conspicuous instances of cities having higher rank in gross value of products than in number of wage earners or value added by manufacture are Kansas City, Kans., South Omaha, Youngstown, Bayonne, and Perth Amboy. On the other hand, cities which lead in the manufacture of textiles, such as Lawrence, Fall River, Lowell, New Bedford, and Paterson, have a decidedly higher rank with respect to number of wage earners than with respect to either value of products or value added by manufacture.

For every city listed in the table a greater gross value of products and, with the exception of Omaha, a greater value added by manufacture were reported in 1909 than in 1899. Only two cities—San Francisco and New Orleans—showed a loss in gross value in 1909 as compared with 1904, and only San Francisco a loss in value added by manufacture. Between 1899 and 1904, however, decreases in gross value of manufactures occurred in four cities. In number of wage earners, Pittsburgh, San Francisco, South Omaha, and Peoria showed a decline in 1909 as compared with 1899; several other cities showed decreases from 1899 to 1904, but these were more than made up during the second half of the decade. It may be noted that the statistics for the Pittsburgh industrial district, which is more comprehensive than the city, would show decided gains and that the decrease in the manufacturing industries in San Francisco is the natural result of the great earthquake and fire.

Of the cities reporting products of \$200,000,000 or more, Detroit showed the greatest percentage

of increase in all of the items under consideration and Cleveland the next greatest, with the exception of the number of wage earners, in which it was exceeded by Milwaukee. Among the smaller manufacturing cities included in the table, those showing conspicuous

increases are Akron, Perth Amboy, Los Angeles, and Seattle.

In the case of most of the cities higher rates of increase in all three items are shown for the period 1904 to 1909 than for the period 1899 to 1904.

<sup>1</sup> Per cent of increase is based on figures in Table 113. A minus sign (-) denotes decrease.

**Distribution according to size of communities.**—It is a matter of interest to know the extent to which the manufacturing enterprises of the country are located in the larger cities as compared with the smaller cities and rural districts. Some indication of this is given in Table 8, on page 451, which distributes the total number of establishments, average number of wage earners, value of products, and value added by manufacture reported in 1909 and 1899 by classes of places, the classes distinguished being cities of 100,000 inhabitants or over, cities of 25,000 to 100,000 inhabitants, cities of 10,000 to 25,000 inhabitants, and the remainder of the country, the latter including the

smaller cities, towns, and other incorporated places and the rural districts. The aggregate population of each group in 1910 and 1900 is also given. Statistics for 1904 are not given because there was no Federal census of population for that year, and it is impossible to determine with accuracy what cities belonged to each group.

In considering this table it should be noted that each place is classed at each census according to its population at that census, so that the same community may be in one class in 1900 and in another class in 1910; and consequently the change in the totals for any given class of communities from 1899 to 1909 should not be

## VALUE OF PRODUCTS FOR PRINCIPAL CITIES: 1909.

taken as measuring the increase in manufacturing business in the same communities. The significant figures are the percentages of the totals reported by each class of places at the two censuses. It should be noted further that the statistics of manufactures shown for any given community are those reported from establishments lying strictly within the municipal

boundaries. Since in many cases large manufacturing establishments are located just outside of city boundaries, the proportion of the manufacturing business of the country as a whole which, in a sense, can be properly credited to places of 10,000 or more inhabitants is somewhat greater than can be shown by the statistics in this table.

Table 8	CITIES AND TOWNS HAVING A POPULATION OF 10,000 AND OVER.										DISTRICTS OUTSIDE OF CITIES AND TOWNS HAVING A POPULATION OF 10,000 AND OVER.

	1899	4,831,075,210	3,377,477,927	69.9	458,679,363	9.5	773,117,708	16.0	2,145,680,856	44.4	1,453,597,283	30.1

In 1909 places of more than 10,000 inhabitants, although they included only 37 per cent of the total population of the country, contained a little over one-half of the total number of manufacturing establishments in the country. These establishments employed nearly two-thirds of the wage earners employed in manufactures (85.3 per cent), and reported more than two-thirds of the total value of products and of the value added by manufacture, the actual percentages being 69 and 70.4, respectively.

It is noteworthy, however, that, whereas communities of this size contained a materially larger proportion of the population of the country in 1910 than they did in 1900—37 per cent as against 31.7 per cent—there was only a very slight increase in their proportion of the total number of manufacturing establishments and of wage earners, and of the total value added by manufacture, and practically no change in their proportion of the total value of products. In other words, while these communities, considered as a

group, have perhaps a little more than held their own in relative importance in manufacturing industry, they have not gained in this respect commensurately with their gain in population. The foregoing statement regarding this group as a whole holds true likewise for the class of cities having from 25,000 to 100,000 inhabitants and for the class having 100,000 or more inhabitants, except that for the latter group there was a slight decrease in the proportion of the value of products and value added by manufacture. On the other hand, the class of communities having from 10,000 to 25,000 inhabitants reported a slight increase in its proportion of the total population in 1910 as compared with 1900, and a slightly larger proportion of the total value of products in 1909 than in 1899, although in respect to number of establishments, average number of wage earners, and value added by manufacture, the proportion for such communities was slightly lower in the later year than in the earlier.

#### PERSONS ENGAGED IN MANUFACTURING INDUSTRIES.

**Definitions and explanations.**—Attention is called to certain differences between the census of 1909 and previous censuses in respect to the manner of collecting and presenting statistics of persons engaged in manufacturing industries.

At the censuses of 1899, 1904, and 1909 the following general classes of persons engaged in manufacturing industries were distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks, and (5)

wage earners. In the reports for the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. The second group included the three classes of salaried officers of corporations, superintendents and managers, and clerks. In certain tables relating exclusively to the present census a somewhat different grouping is employed—that into (1) proprietors and officials, (2) clerks, and (3) wage earners. The first

group includes proprietors and firm members, salaried officers of corporations, and superintendents and managers. In comparative tables covering the censuses of 1899 and 1904 it is of course necessary to group the figures for 1909 according to the same classification that was employed in the earlier censuses.

At this census the number of persons engaged in the industries, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for December 15, or the nearest representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where conditions were exceptional, and particularly in the case of certain seasonal industries, such as canning, the December date could not be accepted as typical and an earlier date had to be chosen.

In the case of employees other than wage earners the number thus reported on December 15 or other representative day has been treated as equivalent to the average for the year, since the number of employees of this class does not vary much from month to month in a given industry. In the case of wage earners the average is obtained in the manner explained in the next paragraph.

In addition to the more detailed report by sex and age of the number of wage earners on December 15 or other representative day, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported each month by 12. The average thus obtained represents the number of wage earners that would be required to perform the work done if all were constantly employed during the entire year. Accordingly, the importance of any industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given in certain tables for each separate industry, is not totaled for all industries combined, because in view of the variations of date such a total is believed not to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation.

In particular, totals by sex and age for the wage earners reported for the representative day for all industries combined would be misleading because of the undue weight given to seasonal industries, in some of which, such as canning and preserving, the distribution of the wage earners by sex and age is materially

different from that in most industries of more regular operation. In order to determine as nearly as possible the sex and age distribution of the average number of wage earners for a given state as a whole, the per cent distribution by sex and age of the wage earners in each industry for December 15 or the nearest representative day has been calculated from the actual numbers reported for that date. The percentages thus obtained have been applied to the average number of wage earners for the year in that industry, to determine the average number of men, women, and children employed. These calculated averages for the several industries have been added up to give the average distribution for each state as a whole and for the entire country.

In 1899 and 1904 the schedule called for the average number of wage earners of each sex 16 years and over, and the average number under 16 years of age without distinction of sex, for each month, and these monthly statements were combined in an annual average. Comparatively few manufacturing concerns, however, keep their books in such way as to show readily the number of men, women, and children employed on the average each month. These monthly returns by sex and age were, in fact, largely estimates. It was believed that a more accurate and reliable sex and age distribution could be secured by taking as a basis of estimate the actual numbers employed on a single day.

**Summary for United States: 1909.**—The following table shows, for 1909, the distribution of the persons engaged in manufacturing, each class being distributed by sex, and the average number of wage earners by age also:

CLASS.	PERSONS ENGAGED IN MANUFACTURES.		
	Total.	Male.	Female.
<b>All classes.....</b>	<b>7,678,578</b>	<b>6,162,263</b>	<b>1,516,315</b>
Proprietors and officials.....	487,173	472,914	14,259
Proprietors and firm members.....	273,265	263,673	9,592
Salaried officers of corporations.....	80,735	78,937	1,798
Superintendents and managers.....	183,173	130,304	2,869
Clerks.....	576,359	437,056	139,303
Wage earners (average number).....	6,615,046	5,252,293	1,362,753
16 years of age and over.....	6,453,553	5,163,164	1,290,389
Under 16 years of age.....	161,493	89,129	72,364

The average number of persons engaged in manufacturing industries during 1909 was 7,678,578. Of these, 6,615,046, or 86.1 per cent, were wage earners; 487,173, or 6.3 per cent, proprietors and officials; and 576,359, or 7.5 per cent, clerks. Of the wage earners, 5,163,164 were males 16 years of age and over; 1,290,389 females 16 years of age and over; and 161,493 children under the age of 16.

Statistics of employees for the last three censuses are given for individual industries in Table 110, and for each state and geographic division in Table 111.

Occupational status by leading industries: 1909.—The following table shows for the 43 leading industries the number of proprietors, officers of corporations, superintendents and managers, clerks, and wage earners,

respectively, and the percentage which the persons included in each of the principal groups represent of the total number employed. The figures for wage earners represent the average number for the year.

Table 10

The highest proportion of proprietors and officials shown for any individual industry covered by the table, 33.3 per cent, is for the butter, cheese, and condensed-milk industry. Many of the establishments in this industry are carried on by cooperative associations, and the practice in 1909, as at prior censuses, was not to include the members of such associations as proprietors in the totals, but to omit them altogether. From the information contained in the reports, it is impossible, in some instances, to distinguish such associations from partnerships, and the large number of proprietors and officials shown for this industry indicates the probability that the members of some associations were inadvertently included as partners. The high percentage of proprietors and

officials in the flour-mill and gristmill and the bakery industries is explained by the fact that the majority of the establishments are small and the work is to a large extent done by the proprietors or their immediate representatives, while in the large flour mills automatic machinery has reduced the amount of labor to a minimum.

A factor which has much to do with the proportion of clerks among the total number of employees in an industry is the method of marketing the product. Thus there are high percentages of clerks in the manufacture of patent medicines and compounds and druggists' preparations, and in the paint and varnish, illuminating-gas, and printing and publishing industries. In these industries the average num-

ber of customers or patrons for each establishment is large and this necessitates a large force of employees for soliciting trade, correspondence, accounting, and collection.

In general, though not in all cases, the larger the average size of establishments in an industry, the smaller is the proportion of proprietors, officials, and clerks, and the larger the proportion of wage earners. Thus the four textile industries—the cotton, woolen, hosiery and knit-goods, and silk-manufacturing industries—which are mainly conducted in large factories, show the largest proportions of wage earners. An unusually large proportion of wage earners is shown also for the paper and pulp mills, the steel works and rolling mills, the construction of steam-railroad cars, the smelting and refining of copper and lead, the tanning and finishing of leather, boots and shoes, and the repair shops of steam railroads.

Comparison with previous censuses as to occupational status.—In order to compare the distribution of persons engaged in manufacturing industries according to occupational status in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See p. 451.) Such a comparison is made in the following table. Comparable figures for 1899 are not available.

CLASS.	PERSONS ENGAGED IN MANUFACTURES.				
	1909		1904		Per cent of increase, 1904-1909.
	Number.	Per cent distribution.	Number.	Per cent distribution.	
Total.....	7,078,578	100.0	6,213,612	100.0	23.6
Proprietors and firm members.....	273,255	3.8	225,673	3.6	21.1
Reservist employees.....	796,257	11.3	514,556	8.4	52.1
Wage earners (average number).....	6,015,066	85.1	5,473,383	88.0	21.0

A greater percentage of increase is shown for salaried employees than for the other two classes. This is due in part to the changes from individual and firm ownership to corporate organization, a change which frequently involves the transfer of proprietors and firm members to the class of officials. At the same time there is no doubt that the number of clerks here classified with the other salaried employees has increased relatively faster than the number of wage earners. This may indicate an increase of the practice on the part of the manufacturers of direct sale of

goods without the interposition of so many middlemen as formerly handled the product.

Sex and age distribution, by leading industries: 1909.—Table 12, on the opposite page, shows, for the 43 leading industries, the number and per cent distribution, by age and sex, of wage earners as reported for December 15, or the nearest representative day. As a means of judging the true importance of the several industries as employers of labor, the average number employed for the entire year is also given in each case, this number, in the case of seasonal industries, being much smaller than the number on the representative day. The per cent distribution for all industries combined, based on the average number employed as shown in Table 9, is also presented.

In all industries combined 78 per cent of the average number of wage earners were males 16 years of age or over, 19.5 per cent females 16 years of age or over, and 2.5 per cent children under the age of 16.

The industries for which the largest proportions of males 16 years of age or over are shown are those in which the work is of a nature requiring much physical strength or a high degree of skill. Thus in the smelting and refining of both copper and lead males 16 years of age or over constitute 99.9 per cent of the total number of wage earners, and in the blast furnaces they constitute 99.8 per cent. Other industries in which males of 16 years or over represent more than 99 per cent of the wage earners are the gas industry, construction of steam-railroad cars, steel works and rolling mills, marble and stone work, the repair shops of steam railroads, and the manufacture of cotton-seed oil.

The proportion of women and children, naturally, is larger in those industries in which the processes require dexterity rather than strength. In six of the industries covered by Table 12—the making of men's and women's clothing, the confectionery industry, and the manufacture of hosiery and knit goods, of patent medicines and compounds and druggists' preparations, and of silk and silk goods—more than half of the wage earners are females 16 years of age or over.

The proportion of wage earners under 16 years is larger in three of the textile industries—the cotton goods, silk and silk goods, and hosiery and knit-goods industries—than in any other of the principal industries of the country. The proportion is also relatively high in the canning and preserving, confectionery, and woolen-goods industries.

1 No totals given for reasons explained on page 452.

2 Less than one-tenth of 1 per cent.

In addition to the industries shown in the above table, which were selected according to their importance with respect to gross value of products, certain others are of interest because of the relatively large number of women and children employed. Table 13, on the following page, shows the sex and age distribution of wage earners in all industries not covered by the preceding table in which there were at least 5,000 women, or in which the women constituted over 40 per cent of the wage earners and numbered not less than 500.

The table shows that there are a large number of industries, some of considerable importance, in which women 16 years of age or over represent more than 40 per cent of the total number of wage earners. In the manufacture of corsets, of artificial flowers, feathers, and plumes, and of steel pens, more than 80 per cent

of the wage earners are women. Other industries in which female wage earners 16 years of age or over constitute over three-fourths of the total number employed are the manufacture of men's furnishing goods and of millinery and lace goods, and the grading, roasting, cleaning, and shelling of peanuts. Large numbers of women are also employed in several industries listed in this table in which, however, the proportion which these represent of the total number of wage earners is less than 40 per cent.

Of the industries shown in Table 13, those in which the proportion of children under 16 years of age exceeds 5 per cent are the manufacture of bags, other than paper; cigar boxes; fancy and paper boxes; horse clothing; cordage and twine; needles, pins, and hooks and eyes; lead pencils; stationery goods, not elsewhere specified; and the cork-cutting industry.

Sex and age distribution, by states: 1909.—Table 14 shows, for each geographic division and each state, the distribution of wage earners by sex and age and the per cent that each class represents of the total average number of wage earners. The numbers of each sex and each age period are obtained\* by applying to the average number employed in each industry in each state the percentages of each age and sex in the number of wage earners reported for December 15, or the nearest representative day, and then totaling the result, as more fully explained on page 452.

The relative number of males 16 years of age or over, females 16 years of age or over, and children under 16 employed in each state depends primarily upon the character of the industries in that state, but the number of persons under 16 employed is also affected by the legislation of the several states with regard to child labor. The largest proportions of female wage earners 16 years of age or over are found in the New England and Middle Atlantic divisions,

owing chiefly to the importance of the textile and clothing industries in these divisions. Next to these two divisions in this respect ranks the South Atlantic division, and in this division appears the largest proportion of wage earners under 16 years of age, 6.3 per cent. This large proportion is due chiefly to the predominance of the textile industries in the South Atlantic states. The proportions of females 16 years of age or over and of children under 16 are lowest in the West South Central, Mountain, and Pacific divisions, where the textile and clothing industries are relatively unimportant.

Among the individual states the largest proportion of female wage earners 16 years of age or over, 32.3 per cent, is found in Rhode Island, and the next largest proportion in New Hampshire, followed closely by Massachusetts and New York. The proportion of children employed is largest in South Carolina, 12.9 per cent, and next largest in North Carolina. Among the Northern states Rhode Island shows the largest percentage of children.

Comparison with previous censuses as to sex and age.—The following table shows, for all industries combined, the distribution of the average number of wage earners according to age periods, and in the case of those 16 years of age or over according to sex, for 1909, 1904, and 1899. As already explained (p. 452), the distribution for 1909 is estimated on the basis of the actual proportions reported for a single represent-

ative day, while the figures for the other two censuses represent averages computed from the number of each class reported for each month of the year.

CLASS.	AVERAGE NUMBER OF WAGE EARNERS.					
	1909		1904		1899	
	Number.	Per cent distribution.	Number.	Per cent distribution.	Number.	Per cent distribution.
Total.....	6,615,046	100.0	5,463,383	100.0	4,712,763	100.0
16 years of age and over.....	6,453,563	97.6	5,308,498	97.1	4,551,487	96.6
Male.....	5,163,184	78.1	4,242,643	77.6	3,632,977	77.1
Female.....	1,290,389	19.5	1,065,855	19.5	918,510	19.5
Under 16 years of age.....	161,493	2.4	159,885	2.9	161,276	3.4

From an examination of this table it will be seen that, while the numbers of men and women workers increased at each census, the number of children under 16 years of age has been comparatively stationary. For all industries combined there was a slight net increase during the 10 years in the number of children employed, although from 1899 to 1904 the number decreased. The percentage which children represent of the total number of wage earners, however, decreased from census to census. The proportion of adult female wage earners has been the same at each census, while the proportion of adult males has increased slightly.

Comparison of sex and age distribution in selected industries: 1909, 1904, and 1899.—Table 16 shows, in percentages, the distribution of wage earners according to sex and age periods, in 1909, 1904, and 1899, for all industries of any importance in which the proportion of women and children is relatively high or in which the absolute number of women and children is large. The percentages for the three years are comparable though not precisely parallel, for the reason that those for 1909 relate to the number employed on December 15, or the nearest representative day, which in the case of many establishments in some industries was in another month than December, while those for 1904 and 1899 (in which years reports were made for each month of the average number of wage earners by sex and age) are based upon the average number in each group for the month of December. Nevertheless, the figures should be very closely comparable for nearly all industries.

In about three-fifths of the 61 industries shown in this table the number of females 16 years of age or over and of children under the age of 16, taken together, formed a smaller proportion of the wage earners reported for December in 1909 than in 1899, or, in other words, the proportion of males 16 years of age or over increased during the decade. In the cotton-goods industry, in which the number of women and children is greater than in any other industry, each of these classes represented a smaller

percentage of the total number of wage earners in 1909 than in 1899. Similar changes have occurred in the men's clothing and the hosiery and knit-goods industries, both of which are important as employers of women and children. In the silk and woolen industries the proportion of women has increased slightly, but the proportion of children under 16 has decreased. For the tobacco-products industry, in which the proportion of

children has likewise decreased, a marked increase is shown in the proportion of women employed.

Among the 61 industries listed in the table there were 22 in which the percentage of children was higher in 1909 than in 1899, but most of these are relatively unimportant industries. The most conspicuous increase in the proportion of children employed is in the manufacture of bags, other than paper.

Table 16

INDUSTRY.	PER CENT OF ALL WAGE EARNERS EMPLOYED. <sup>1</sup>

<sup>1</sup> For 1904 and 1899 the percentages are based on the average numbers reported for the month of December; for 1909, on the number employed on Dec. 15, or the nearest representative day.

Comparison of sex and age distribution, by states: 1909, 1904, and 1899.—Table 17 shows, for each geographic division and state, for 1909, 1904, and

1899, respectively, the percentage of the average number of wage earners employed during the year represented by males 16 years of age or over, females 16

years of age or over, and children under 16 years of age. For 1909 the percentages have been computed from the returns for a representative day in the manner described on page 452; for the other two years the bases of calculation are average numbers computed for the year from the returns made for each month.

In every geographic division except New England, children under 16 years of age constituted a smaller proportion of the average number of wage earners in 1909 than in 1899, while the proportion in New Eng-

land rose slightly, wholly on account of increased proportions in Massachusetts and Connecticut. The proportion of children decreased during the decade in all but five of the states, the exceptions being Massachusetts, Connecticut, Maryland (where there was very little change), Florida, and New Mexico. In the Middle Atlantic, East North Central, West North Central, East South Central, and Mountain divisions women 16 years of age or over represented a larger proportion of the total in 1909 than in 1899, but in the other divisions they constituted a somewhat smaller proportion. Most of the individual states show comparatively little change in the proportion of women, the most conspicuous increases being in certain states where the manufacturing industries are still comparatively undeveloped, such as South Dakota and Nebraska. Marked decreases in the proportion of women took place in Louisiana and California.

**Wage earners employed, by months.**—The following table gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined. For purposes of comparison figures for 1904 are also given, but these are on a slightly different basis, since at that census each establishment was asked to report the average number employed for each month rather than the number employed on a specified day of each month.

MONTH.	WAGE EARNERS IN ALL MANUFACTURING INDUSTRIES. <sup>1</sup>			
	Number.		Per cent of maximum.	
	1909	1904	1909	1904
January.....	6,210,063	5,262,472	88.6	92.7
February.....	6,297,627	5,330,471	89.9	93.9
March.....	6,423,517	5,450,736	91.7	95.0
April.....	6,437,633	5,493,343	91.9	96.3
May.....	6,457,279	5,512,373	92.2	97.1
June.....	6,517,469	5,463,804	93.0	96.2
July.....	6,486,676	5,323,966	92.6	93.8
August.....	6,656,933	5,420,618	95.0	95.5
September.....	6,898,765	5,608,412	98.5	98.8
October.....	6,997,090	5,676,920	99.9	100.0
November.....	7,006,853	5,587,028	100.0	98.4
December.....	6,990,652	5,490,453	99.8	96.7

<sup>1</sup> The numbers for 1909 represent the number employed on the 15th of each month, or the nearest representative day; those for 1904, the average number employed during each month.

In 1909 the largest number of wage earners, 7,006,853, was employed in November, and the smallest number, 6,210,063, in January, this number being equal to 88.6 per cent of the maximum. In 1904 the largest number was employed in October and the smallest number in January, the minimum representing 92.7 per cent of the maximum. In 1909 a fairly constant increase in employment was shown from January to November, except that the number employed in July was a little lower than in June.

The figures for employment by months for all industries combined fail to show fully the variations in employment, since a variation in one direction in one industry may be offset by a variation in the opposite direction in another industry. Except for distinctly

seasonal industries, however, the employment in most of the important industries of the country appears to have been comparatively steady throughout the year 1909. The following table shows the amount of variation in certain industries. It gives (1) the 14 industries which reported the largest average number of wage earners, including all reporting 100,000 or more, and (2) the 12 industries which show the greatest variations in employment, including all (except one or two employing less than 1,000 wage earners each) in which the number for the month of least activity is less than one-half that for the month of greatest activity.

Table 19

Rice, cleaning and polishing.....	1,239	Oct...	2,017	July....	436	21.6

Considering first the principal industries, it will be seen that the greatest regularity of employment was in the manufacture of cotton goods, in which the number employed during the month of least activity, January, was equal to 97.6 per cent of the number employed in the month of greatest activity, Decem-

ber. Other industries in which the number for the month of least activity was more than 90 per cent of the number for the month of greatest activity are the manufacture of boots and shoes, bakeries, the men's clothing industry, the tobacco-products industry, the manufacture of woolen goods and of hosiery and knit goods, and printing and publishing. Among the principal industries the greatest variation appears in the steel works and rolling mills, in which the number employed during March, the month of least activity, was only 75.8 per cent of the number employed during December, the month of greatest activity. The women's clothing and foundry and machine shop industries also show a comparatively large degree of variation in the number employed.

The lumber industry, as already stated, includes logging camps as well as sawmills, and also includes planing mills and wooden packing-box factories. The variation in employment in all of these branches taken together for the country as a whole is not very great, the number employed during the month of least activity being 87.8 per cent of the number employed during the month of greatest activity. For the logging camps alone, however, there is greater variation, the number employed during July, 170,587, being only 76.6 per cent of the number employed in December, which was 222,564. Furthermore, since in different sections of the country the active season in the woods covers different months, if the operations of the logging camps in each geographic division are considered separately, a much wider variation appears in the number employed, this being particularly true in the Northern states.

There are a number of industries which are conspicuously seasonal in character. In the case of some of these the weather will not permit work except at certain seasons, and in others the raw material used is available only at certain seasons and must be handled immediately, while in the case of the remainder the demand for the products is conspicuously seasonal. The most variable large industry is canning and preserving, which naturally is confined mainly to the period at which fruits and vegetables are harvested. The industry includes the canning and preserving of fish and oysters, which is carried on in the winter months; if this were excluded there would necessarily be a much greater variation in the numbers employed. In this industry the number employed during January, the month of least activity, formed only 12.9 per cent of the number employed during September.

## CHARACTER OF OWNERSHIP.

Summary for United States.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. Comparative figures are given, covering all industries combined, for the censuses of 1909 and 1904. Similar data for 1899 are not available.

Table 20

CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

The most important distinction shown is that between corporate and all other forms of ownership. Of the total number of establishments reported as engaged in manufacturing industries in 1909, 25.9 per cent were under corporate ownership. The corresponding figure for 1904 was 23.6 per cent. While corporations thus controlled only about one-fourth of the total number of establishments, they gave employment to a large proportion of all wage earners reported, namely, 75.6 per cent in 1909 and 70.6 per cent in 1904. The value of the products of the factories operated by corporations represented 79 per cent of the total value of products for all establishments in 1909 and 73.7 per cent in 1904. These figures show that even during this short period of five years the corporate form of ownership increased so greatly that it represented an appreciably larger proportion of the manufacturing interests of the country in 1909 than in 1904.

Partnerships (including limited partnerships) controlled about one-fifth of the total number of manufacturing establishments in 1909, and individuals rather more than one-half of the total number. These two classes of establishments were about equal in volume of business, each reporting in the neighborhood of one-eighth of the total number of wage earners and one-tenth of the total value of products in 1909. During the five years from 1904 to 1909 partnerships lost ground, relatively, to a greater degree than individual ownership, presumably because of the incorporation of many concerns previously operated by firms.

In 1909 there were 4,120 establishments operated by cooperative companies and other miscellaneous forms of ownership that could not be classified as individual, firm, or corporate ownership. These establishments gave employment to only two-tenths of 1 per cent of the wage earners, and the value of their products was only five-tenths of 1 per cent of the total value reported for all establishments.

From 1904 to 1909 the average number of wage earners per establishment decreased for all three principal classes of ownership, while the average value of products per establishment decreased for the establishments under individual and firm ownership but increased for corporate ownership.

Proportion of business done by corporations in the principal industries: 1909 and 1904.—Table 21, on the following page, shows, for the principal industries, the number of manufacturing establishments operated by corporations in 1909 and 1904, and the percentage which they represent of the entire number of establishments; also the value of the manufactured products made in establishments under corporate ownership and the percentage which this represents of the total value. The figures as to total value, on which the percentages are based, will be found in Table 110. Two important industries, the repair shops of steam railroads and the smelting and refining of copper, are not shown separately in this table, as to do so would disclose the operations of individual establishments.

This table shows that in industries where a large investment in plant and machinery is necessary to the proper conduct of the business, the establishments are as a rule operated by corporations, it being easier under this form of ownership to obtain the necessary capital. All of the establishments engaged in the smelting and refining of lead in 1909 were operated by corporations, and more than 90 per cent of the blast furnaces, steel works and rolling mills, cottonseed-oil mills, and establishments manufacturing steam-railroad cars were under this form of ownership. The general tendency has been toward an increase in the proportion of the establishments operated by corporations, and 35 of the 41 selected

industries show an increase in this respect. In 24 of the 41 selected industries, less than 50 per cent of the establishments were operated by corporations.

As a rule corporations control a much larger proportion of the output of manufactures than they do of the number of establishments. In 16 of the 41 industries the value of the products reported by corporations formed in 1909 more than 90 per cent of the value

reported for all establishments, and in all but 5 of the industries the corporations reported more than 50 per cent of the total value of products. In only 1 of the selected industries, the manufacture of women's clothing, did the proportion of the total value of products reported by corporations fall as low as one-fourth. In this industry it formed only 23.6 per cent of the total value reported for 1909.

Proportion of business done by corporations, by states: 1909 and 1904.—Table 22 shows, for the geographic divisions and for each state, the number of manufacturing establishments operated by corporations in 1909 and 1904, and the percentage which they represent of the entire number of establishments;

also the value of the manufactured products made in establishments under corporate ownership, and the percentage which this represents of the total value. The figures as to total value for each of the states, on which the percentages are based, will be found in Table 111.

<sup>1</sup> Includes establishments operated under other forms of ownership, to avoid disclosing individual operations. There were eight of these establishments in 1909 and seven in 1904 which were included in the total for geographic divisions but are not included in the total for the United States.

Table 22 shows that in most of the states in 1909 the number of manufacturing establishments owned by corporations represented between one-fifth and one-third of the total number of manufacturing establishments. Vermont, North Dakota, Nebraska, Maryland, and Virginia were the only states in which less than one-fifth of the establishments were owned by corporations, and Rhode Island, Connecticut, Ohio, Louisiana, and five states in the western part of the country were the only ones in which over one-third were under this form of ownership. In a large majority of the states the proportion of establishments operated by corporations was larger in 1909 than in 1904, the exceptions being Nebraska, Virginia, South Carolina, Georgia, Tennessee, Alabama, Mississippi, Arkansas, Montana, Idaho, Wyoming, and Arizona.

In most of the states between three-fifths and nine-tenths of the total value of manufactured products in 1909 was reported by establishments under corporate

ownership. The only state in which the proportion was less than three-fifths was South Dakota, while in Connecticut, South Carolina, Montana, Colorado, Arizona, Utah, and Nevada the proportion was nine-tenths or more. Among the great manufacturing states, New York is conspicuous for the comparatively small proportion, 62.6 per cent, of the value of its products contributed by this class of establishments. In almost every state a larger percentage of the total value of products was reported by such establishments in 1909 than in 1904, thus indicating that the tendency toward the incorporation of manufacturing concerns, particularly the larger concerns, is general and to a considerable degree independent of variations in state legislation regarding corporations. The only states in which the proportion of the total value produced by corporations was less in 1909 than in 1904 are Nebraska, Delaware, Alabama, Mississippi, Montana, Wyoming, New Mexico, and Arizona, and the difference in each case was slight.

### SIZE OF ESTABLISHMENTS.

**Summary for United States.**—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it, Table 23 groups the establishments in all industries combined according to the value of their products, and shows for each group, for 1909 and 1904, the number of wage earners, value of products, and value added by manufacture, together with the percentage of the respective totals represented by each group. It also gives the average size of establishments as measured by these three items; the changes in this average are, however, much less significant than the changes in the percentages for the several groups.

Of the 268,491 establishments reported as engaged in manufacturing industries in 1909, there were 3,060, or 1.1 per cent, whose products were valued at more than \$1,000,000 each. The corresponding figures for 1904 were 1,900 establishments out of 216,180, or nine-tenths of 1 per cent. While these establishments represented a comparatively small proportion of the total number of establishments, they gave employment to a much larger proportion of all the wage earners reported, namely, 30.5 per cent in 1909 and 25.6 per cent in 1904. The value of products of such establishments represented 43.8 per cent of the total value of products in 1909 and 38 per cent in 1904.

The figures indicate that establishments of this class produced a considerably larger proportion of the manufactures of the country in 1909 than in 1904. It should be noted that the increased proportion is due partly to the fact that certain establishments included in the other groups in 1904 were included in this group in 1909 as the result of an increase in the value of their output.

Table 23

VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

In 1909 establishments with a product valued between \$100,000 and \$1,000,000, gave employment to 43.8 per cent of the wage earners, and the value of their products formed 38.4 per cent of the total. Establishments with a product valued between \$20,000 and \$100,000 gave employment to about one-sixth of the wage earners, and the value of their products formed about one-eighth of the total. The establishments which

had a product valued between \$5,000 and \$20,000, constituted about one-third of the whole number, but gave employment to only 7.1 per cent of the wage earners, and the value of their products formed only 4.4 per cent of the total. Establishments that had a product in 1909 valued at less than \$5,000 also formed about one-third of the total number, but they gave employment to only 2.2 per cent of the wage earners and turned out products whose value amounted to only 1.1 per cent of the total. In this class of establishments a large proportion of the work was done by the proprietors and firm members.

Of the five classes designated, the class of establishments with products valued at \$1,000,000 or over is the only one that reported a larger proportion of the total value of products in 1909 than in 1904, every other class having lost relatively. The same statement is true as to the number of wage earners, except that the establishments of smallest size, as well as those of largest size, have gained somewhat in their proportion of the total number employed.

During the five years 1904-1909 the average value of products per establishment increased from \$68,433 to \$76,993, and the average value added by manufacture from \$29,113 to \$31,767. These changes can scarcely be taken as in themselves indicating a tendency toward concentration, as the increased values shown are due in part to the increase that has taken place in the prices of commodities. The average number of wage earners per establishment was the same at the two censuses, namely, 25.

Relative importance of large establishments in the principal industries: 1909 and 1904.—The following table shows for the principal industries of the United States, for 1909 and 1904, the number of establishments manufacturing products to the value of \$1,000,000 or more, and the percentage which such establishments represent of the total number of establishments; also the value of products made by establishments of this class and the proportion which that value represents of the total for all establishments in the industry.

<sup>1</sup> The statistics for three establishments omitted, to avoid the disclosure of individual operations.

<sup>2</sup> The statistics for two establishments omitted, to avoid the disclosure of individual operations.

<sup>3</sup> The statistics for one establishment omitted, to avoid the disclosure of individual operations.

The total value of products for each industry as a whole, from which the percentages in the last two columns are calculated, appears in Table 110. Three important industries, the manufacture of leather goods, marble and stone work, and sugar and molasses, are not shown in the table in order to avoid the disclosure of individual operations.

While the gross value of products is in some respects not the best criterion of the relative importance of different industries or of different states or sections in respect to manufacturing business, it is a fairly satisfactory standard for comparing different classes of establishments within the same industry. Table 24 shows, as might be expected, exceedingly wide variation among the different industries in respect to the proportion of large establishments, and in respect to the proportion of the total value of products which is reported by such establishments. The industry in which establishments reporting products to the value of \$1,000,000 or more constitute the largest proportion of the total number of establishments is the smelting and refining of copper, followed, in order, by the smelting and refining of lead, steel works and rolling mills, blast furnaces, the refining of petroleum, and the construction of steam-railroad cars. In each of these industries in 1909 establishments of this class constituted more than one-fifth of the total number, and in the smelting and refining of copper they constituted about five-sixths of the total. In these industries, moreover, establishments of this size reported exceptionally high proportions of the total value of products. The smelting and refining of lead and of copper ranked highest in this respect, with 99.2 and 99 per cent, respectively, of the total value of products reported by establishments with a value of products above \$1,000,000. The slaughtering and meat-packing industry, also, though its proportion of large establishments is not conspicuously high, shows a very high proportion of the total value of products, 85.8 per cent, reported from such establishments.

On the other hand, there are a number of industries in which the smaller establishments predominate and in which only a very small proportion of the total value of products is contributed by establishments manufacturing products to the value of \$1,000,000 or more. In the bakery, butter, cheese, and condensed-milk, women's clothing, furniture, and lumber industries the proportion of the total value of products reported by such establishments is less than 10 per cent, and there are several other industries of importance in which the proportion is less than 20 per cent.

In practically every industry named in the table the number of establishments manufacturing products to the value of \$1,000,000 or more increased materially

from 1904 to 1909, and constituted a larger proportion of the total number of establishments in the later year than in the earlier. In the same way the value of the products of such establishments in nearly every industry constituted a larger proportion of the total value in 1909 than in 1904, the only exceptions being in the manufacture of electrical machinery, apparatus, and supplies, the construction of railroad cars, the illuminating-gas industry, the distillery industry, and the refining of petroleum.

**Relative importance of large establishments, by states: 1909 and 1904.**—Table 25 presents, by states grouped according to geographic divisions, statistics showing the relative importance of the establishments having a product valued at \$1,000,000 or over for the census years 1909 and 1904. Certain states are not shown separately, as to do so would disclose individual operations.

The differences among the several states with respect to the extent to which manufacturing is carried on in large establishments are dependent in part upon the character of the industries predominant in each state. It also depends in part upon the degree to which those industries have been developed; in those states in which manufactures are extensive the large establishments are likely, other conditions being equal, to do a greater proportion of the manufacturing than in states where manufactures are relatively unimportant.

The state in which establishments manufacturing products to the value of \$1,000,000 or more represented the largest proportion of the total number of establishments in 1909 was Rhode Island, with 3.5 per cent, followed by Arizona and Massachusetts, in the order named. The proportion in New York, the leading manufacturing state, was comparatively low, 1 per cent. There are several states in which such establishments represented only a small fraction of 1 per cent of the total number.

In most of the states the large establishments contributed a very considerable proportion of the entire value of manufactured products. The state in which this proportion was the highest in 1909 is Arizona, with 84.1 per cent, followed by Nebraska, Montana, Kansas, New Jersey, Illinois, Utah, and Pennsylvania, in each of which states the products of establishments of this class represented more than one-half of the total value. The predominance of the smelting and refining of copper and lead in the Mountain states named, of the slaughtering and meat-packing industry in Kansas and Nebraska, of the slaughtering and the iron and steel industries in Illinois, of the iron and steel industry in Pennsylvania, and of the smelting and refining of copper and the refining of petroleum in New Jersey serve in a large measure to explain these high

percentages. In New York, the most important manufacturing state, 37 per cent of the total value of products was reported by establishments of the class under consideration, this comparatively low percentage being the result in part of the great magnitude in that state

of the clothing industries, which are mostly conducted in small establishments. Of the states given in the table those in which the proportion of the total value of products reported by large establishments is less than 10 per cent are Oklahoma, Arkansas, and Florida.

<sup>1</sup> Excluded to avoid disclosures of individual establishments, but included in the total for the United States.

<sup>2</sup> All other states embrace Idaho, Mississippi, Nevada, North Dakota, and Wyoming in 1909 and Arkansas, District of Columbia, Mississippi, and New Mexico in 1904.

In a large majority of the states, establishments manufacturing products to the value of \$1,000,000 or more represented a larger proportion of the total number of establishments in 1909 than in 1904, and reported a larger proportion of the total value of

products in the later year than in the earlier. The only states where this was not true with respect to the value of products are Vermont, Delaware, South Carolina, Nebraska, Montana, Colorado, Utah, and Washington.

**Establishments grouped according to number of wage earners: 1909.**—In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed, which is shown by Table 26.

**Table 26**

ESTABLISHMENTS EMPLOYING—	ESTABLISHMENTS, WAGE EARNERS, AND PER CENT OF TOTAL.			
	Number of establishments.	Average number of wage earners.	Per cent of total.	
			Estab-lish-ments.	Wage earners.
Total.....	268,491	6,615,046	100.0	100.0
No wage earners.....	27,712		10.3	
1 to 5 wage earners.....	136,289	311,704	50.8	4.7
6 to 20 wage earners.....	57,198	640,798	21.3	9.7
21 to 50 wage earners.....	23,544	764,408	8.8	11.6
51 to 100 wage earners.....	10,964	782,298	4.1	11.8
101 to 250 wage earners.....	8,116	1,258,639	3.0	19.0
251 to 500 wage earners.....	2,005	1,006,467	1.1	15.2
501 to 1,000 wage earners.....	1,223	837,475	0.5	12.7
Over 1,000 wage earners.....	540	1,013,274	0.2	15.3

Of the 268,491 establishments reported for all industries, 10.3 per cent employed no wage earners; 50.8 per cent, from 1 to 5; 21.3 per cent, 6 to 20; and 8.8 per cent, 21 to 50. The most numerous single group consists of the 136,289 establishments employing from 1 to 5 wage earners, and the next of the 57,198 establishments employing from 6 to 20 wage earners. There were 4,668 establishments that reported the employment of over 250 wage earners; 540 of these employed over 1,000.

The single group having the largest number of wage earners was the group comprising the establishments employing from 101 to 250. This group employed 1,258,639 wage earners, or 19 per cent of the total number.

Table 27 shows, for 1909, for all industries combined and for 43 industries individually the number of establishments and average number of wage earners, by groups, and the percentage of wage earners in each group for these industries.

**Table 27**

In 17 of the 43 industries listed separately in the table, establishments employing from 1 to 100 wage earners reported more than one-half of the total number employed in each industry. In 5 of these industries, establishments employing from 101 to 500 wage earners reported more than one-half of the total number, while 8 establishments employing over 500 wage earners reported more than one-half of the total.

The highest proportion (76.7 per cent) of wage earners employed by establishments reporting an average of more than 500 was in the steel works and rolling mill branch of the iron and steel industry.

Table 28 shows, for 1909, for geographic divisions and states, the number of establishments and average number of wage earners, by groups, and the percentage of wage earners in each group, for these divisions and states.

## DISTRIBUTION OF EXPENSES.

**Expenses in leading industries.**—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the total cost of manufacture and consequently the profits. Facts of interest can, however, be brought out concerning the relative importance of those classes of expenses which are reported. The following table shows in percentages the distribution of these expenses among the classes indicated, for all industries combined and for the 43 principal industries separately.

Table 29

INDUSTRY.	PER CENT OF TOTAL EXPENSES REPORTED			
	Salaries.	Wages.	Materials.	Miscellaneous expenses.
<b>All industries</b> .....	<b>5.2</b>	<b>18.6</b>	<b>65.8</b>	<b>10.5</b>

Clothing, men's, including shirts.....	5.2	20.7	57.9	16.2
Clothing, women's.....	6.0	23.0	61.1	9.9
Distilleries.....	7.6	13.1	67.9	11.4
Copper, tin, and sheet-iron products.....	5.8	22.4	63.7	8.1
Cotton goods, including cotton small wares.....	2.6	24.0	66.9	6.5
Electrical machinery, apparatus, and supplies.....	10.0	24.5	53.8	11.7
Flour-mill and gristmill products.....	1.5	2.6	92.8	3.1
Foundry and machine-shop products.....	8.7	29.8	50.1	11.4
Furniture and refrigerators.....	7.3	30.8	51.0	10.9
Gas, illuminating and heating.....	10.9	18.4	46.2	24.5
Hosiery and knit goods.....	4.4	25.5	62.7	7.4
Iron and steel, blast furnaces.....	1.8	6.8	88.4	3.0
Iron and steel, steel works and rolling mills.....	2.9	18.3	73.9	4.8
Leather goods.....	7.2	19.3	64.5	8.9
Leather, tanned, curried, and finished.....	2.2	10.5	81.2	6.1
Liquors, distilled.....	1.0	1.6	18.4	79.0
Liquors, malt.....	7.6	13.7	32.2	46.5
Lumber and timber products.....	4.8	32.0	51.0	12.2
Marble and stone work.....	6.7	44.8	39.4	9.1
Oil, cottonseed, and cake.....	3.1	4.3	87.7	4.9
Paint and varnish.....	9.3	7.4	71.1	12.2
Paper and wood pulp.....	4.0	17.2	69.7	9.1
Patent medicines and compounds and druggists' preparations.....	14.9	8.7	44.1	32.4
Petroleum, refining.....	1.8	4.4	89.6	4.2
Printing and publishing.....	16.7	26.6	32.6	24.1
Silk and silk goods, including throwsters.....	4.2	21.8	60.8	13.2
Slaughtering and meat packing.....	1.5	3.9	91.3	3.3
Smelting and refining, copper.....	0.7	3.8	94.4	1.1
Smelting and refining, lead.....	0.9	3.4	94.8	0.9
Sugar and molasses, not including beet sugar.....	0.9	2.8	92.6	3.7
Tobacco manufactures.....	4.6	19.0	48.4	28.0
Woolen, worsted, and felt goods, and wool hats.....	2.6	18.7	72.9	5.8
All other industries.....	6.4	21.1	62.1	10.5

This table shows that, for all industries combined, 65.8 per cent of the total expenses reported were incurred for materials, 23.7 per cent for services (that is, salaries and wages), and 10.5 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries. The item of salaries takes on large proportions in such industries as the gas industry, the manufacture of patent medicines, and printing and publishing, which require a

large force of employees for accounting and collecting. The industries for which the highest percentages for wages are shown—in each case over 30 per cent—are marble and stone work, steam-railroad repair shops, the lumber and timber industry, and the furniture industry. The cost of materials constituted over 90 per cent of the expenses reported in the smelting and refining of copper and lead, flour and grist milling and the manufacture of sugar and molasses, slaughtering and meat packing, and the butter, cheese, and condensed-milk industry. Miscellaneous expenses, which are made up principally of rent, taxes, insurance, and advertising, are relatively largest in the distillery and brewery industries, the manufacture of patent medicines and compounds, and the tobacco-products industry, all of which are subject to internal-revenue taxes; they are also large in the gas and the printing and publishing industries.

**Expenses, by states.**—Table 30 shows, for each geographic division and each state, the per cent distribution in 1909 of the total expenses reported among the principal items.

The variation among the several divisions and states in the percentage of the total expenses which is represented by each class follows closely the variation in the character of the predominating industries. Thus the percentage of expenses incurred for materials is highest and that incurred for wages lowest in the West North Central division, this condition being due to the predominating importance in those states of the flour-milling and the slaughtering industries, in which materials contribute the greater part of the value of products. The proportion of expenses incurred for materials is also high in the Mountain division, on account of the influence of the smelting and refining industries. Wages represent the highest percentage of the total expenses, 23.7, in the New England division, where the textile and other highly elaborative industries predominate.

Among the individual states the highest percentage for materials is shown for Kansas and the next highest for Nebraska, while this percentage is lowest in Florida; the highest percentages for wages are shown for Wyoming, New Mexico, and Florida, in the order named. Among the great manufacturing states of the East and North there is no very great variation in the distribution of expenses among the various items. Of the 10 most important manufacturing states, Massachusetts has the highest proportion for wages and is among the lowest for miscellaneous expenses.

The exceptionally high percentage for miscellaneous expenses in Kentucky, 25.8, is due to the importance there of the distillery industry, in the miscellaneous expenses of which are included very large sums paid as internal-revenue tax.

## ENGINES AND POWER.

**Summary for United States: 1909, 1904, and 1899.**—The following table shows for all industries combined the number of engines or motors employed by manufacturing concerns and their horsepower at the censuses of 1909, 1904, and 1899. The figures for the total primary power used exclude duplications and represent the primary power of engines, water wheels, etc., owned by the manufacturing establishments

themselves plus the electric or other power rented from outside concerns. A separate presentation is made of the number and horsepower of electric motors operated by current generated within the establishments, which, of course, as it represents secondary power, is not included in the totals. This item plus the electric power rented makes up the total for electric power, which is shown separately.

Run by rented power.....	199,309	61,589	( <sup>1</sup> )	1,749,031	441,589	182,562	36.3	27.7	37.0

<sup>1</sup> Not reported.<sup>2</sup> Less than one-tenth of 1 per cent.

The total horsepower of manufacturing establishments was 18,675,376 in 1909, as compared with 13,487,707 in 1904 and 10,097,893 in 1899. In 1909, 90 per cent of the horsepower was that of engines or

motors owned by the manufacturing establishments themselves, and 10 per cent was rented power, mostly electric. Especially striking is the increase in the use of gas engines and of electric power, both that rented

from outside concerns and that generated by the manufacturing concerns themselves. The total horsepower of electric motors in 1899, including both those operated by purchased current and those operated by current generated in the establishment, was 492,936; in 1909 it was 4,817,140, or nearly ten times as great. The practice of renting electric power is rapidly becoming more common among small establishments and even among large establishments, while the large concerns more and more tend to use electric motors

for the purpose of applying the power which they themselves generate.

The amount of water power owned by manufacturing establishments shows only a comparatively moderate rate of increase during the decade, but not a little of the electric power rented by manufacturers is generated in the first instance by utilizing water power.

**Horsepower, by leading industries.**—The following table shows, for the 43 leading industries, the amount of each of the several kinds of power used in 1909:

Table 12

<sup>1</sup> Includes the horsepower of motors run by rented current and also of those run by current generated by the establishment.

This table shows very wide differences among the industries with respect to the relative importance of the several kinds of power. These differences are due partly to differences in the geographic location of the industries, which affect the character of power available, and partly to differences in the character of machinery used, which affect the adaptability of the different kinds of power.

The power developed by the use of gas engines represents a larger proportion of the total power employed in establishments engaged in the manu-

facture of carriages and wagons, flour mills and grist-mills, foundries and machine shops, blast furnaces, steel works and rolling mills, lumber mills, and printing and publishing establishments than in any of the other industries listed. The largest absolute amount of power derived from gas engines is reported for the blast furnaces, and the next largest for the foundries and machine shops.

A very large proportion of the total power derived from water wheels is used in four industries, namely, the manufacture of cotton goods, flour mills and grist-

mills, the lumber and timber products industry, and the manufacture of paper and wood pulp. In the last-mentioned industry the horsepower developed by water wheels amounts to 785,961, about 60 per cent of the total power used in that industry.

The extent to which electric motors are utilized in applying the power employed varies considerably in the different industries. In a considerable number of industries the electric power, including that generated by the manufacturing establishments themselves and that rented from other concerns, is equal to more than one-half of the total primary power. These industries are the manufacture of automobiles, bread and other bakery products, the construction of steam-railroad cars, the repair shops of steam-railroad companies, the chemical industry, the making of men's and of women's clothing, the manufacture of electrical machinery, apparatus, and supplies, the foundry and machine-shop industry, the manufacture of leather goods, and the printing and publishing industry. In the electrical-machinery industry the horsepower of electric motors installed is greater than the total primary power; this may be accounted for by reason of the provision of motors for the operation of machinery which is not in constant use. The largest absolute amount of electric power is reported by the steel works and rolling mills, and the next largest, by the foundries and machine shops. In the former the electric power is equal to a little over one-third of the total amount of primary power and in the latter to nearly three-fourths.

**Horsepower, by states: 1909.**—Table 33 shows, by states grouped according to geographic divisions, the amount of each of the several kinds of power used in manufacturing industries in 1909.

The rank of the states with respect to the amount of power used in manufacturing industries is somewhat different from that with respect to value of products and other leading items in the statistics of manufactures. Although New York ranks first among the states in most of the leading items, Pennsylvania outranks it in respect to the amount of power used in manufacturing industries. New York stands second, Ohio third, Massachusetts fourth, and Illinois fifth. The relative total amount of power used is largely dependent upon the character of the industries predominant in each division or state. The relative extent to which the different kinds of power are used in the several divisions and states is also dependent in part upon the character of the industries and in part upon the situation of each state with reference to supplies of coal, petroleum, and gas, and with reference to the availability of water power.

In every division—in fact in every state, except Maine and Vermont—steam engines are the most important source of power. The proportion which power generated by gas engines represents of the total power

is larger in the East North Central division than in any other division, partly on account of the proximity of gas wells. The Middle Atlantic states rank next in the proportion of the total power which is developed by gas engines. With respect to power obtained from water wheels owned by the manufacturing establishments, New England ranks far ahead of the other divisions both in the absolute amount of power and in the proportion which water power represents of the total. More than two-fifths of the total power derived from water wheels owned by manufacturing establishments is found in New England, and more than one-fourth of the total power utilized by the factories of New England is derived from water wheels. The Middle Atlantic division ranks next in this respect. The largest absolute amounts of power utilized by means of electric motors (including both those operated by purchased current and those operated by current generated in the establishment) are reported from the Middle Atlantic division, the East North Central division, and New England, in the order named, and in these three divisions also the proportion which electric power represents of the total is unusually large, no very great difference appearing among the three divisions in this respect. The proportion of electric power is also high in the Mountain, Pacific, and West North Central divisions.

The individual states which lead in the use of gas engines to develop power are Pennsylvania, Indiana, Ohio, New York, Illinois, Kansas, and New Jersey, in the order named. The absolute amount of power of this character is greatest in Pennsylvania, and the proportion which such power represents of the total power used is greatest in Indiana. The power derived from water wheels owned by manufacturing establishments is greater in New York than in any other state, but the proportion which such power represents of the total power is greatest in Maine. Other leading states in respect to the absolute amount of such water power are Massachusetts, Wisconsin, New Hampshire, Vermont, Connecticut, Minnesota, Pennsylvania, Oregon, Virginia, North Carolina, and Michigan; the leading states in respect to the proportion which it represents of the total power are Vermont, New Hampshire, Oregon, Wisconsin, New York, Minnesota, Connecticut, Massachusetts, Virginia, and Montana.

In the absolute amount of electric power utilized for manufacturing, Pennsylvania leads and is followed by New York, Ohio, Massachusetts, Illinois, Indiana, and New Jersey, in the order named. With respect to the proportion which electric power represents of the total Nevada ranks first, and is followed by California, Utah, Illinois, New York, Montana, Arizona, Indiana, and Massachusetts in the order named. In Nevada the power of electric motors forms 54.1 per cent and in California 40.3 per cent of the total power reported for these states.

<sup>1</sup> Includes the horsepower of motors run by rented current and also of those run by current generated by the establishment.

## SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products and other information for securing which no provision is made on the general schedule. Data of this character are here presented for a number of important industries. As far as possible the statistics are grouped according to the character of the finished products. The statistics in each table relate to the United States as a whole, not including Alaska, Hawaii, Porto Rico, or other outlying possessions.

## FOOD AND KINDRED PRODUCTS.

**Butter, cheese, and condensed milk.**—The following table presents statistics for the butter, cheese, and condensed-milk industry. The figures cover only the manufacture of the factory products. The statistics for this class of products made on farms are not avail-

able for 1909; in 1899, however, 1,071,626,056 pounds of butter and 16,372,318 pounds of cheese were made on farms, of which 518,042,767 pounds of butter and 14,692,542 pounds of cheese were sold.

The value of the factory products of this industry more than doubled during the period 1899-1909. Condensed milk, for which the ratio of increase was highest, nearly trebled in value, while butter more than doubled. Since 1899 the increase in prices has been quite pronounced in this industry, as shown by the fact that the butter product increased 113.5 per cent in value and only 48.7 per cent in quantity, and the output of cheese 63 per cent in value and only 10.3 per cent in quantity. As shown by the note to the table, considerable quantities of butter, cheese, and condensed milk were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>1</sup> Not reported separately.

<sup>2</sup> In addition, 2,381,212 pounds of butter, to the value of \$664,171; 49,413 pounds of part cream cheese, to the value of \$5,745; 401,300 pounds of condensed milk, to the value of \$24,078; and other dairy products to the value of \$25,388 were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>3</sup> In addition, 1,971,120 pounds of butter, to the value of \$448,729, and other dairy products to the value of \$71,588 were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

**Canning and preserving.**—Table 35 includes statistics for establishments engaged in the various branches of the canning industry and also for those manufacturing pickles, preserves, and sauces. The table does not include meats and other products canned in slaughtering and meat-packing establishments (see Table 38).

The total value of all classes of products of canning and preserving establishments in 1909 was \$157,101,201 and in 1899, \$99,335,464, the increase for the decade being 58.2 per cent.

Of the two groups of products listed separately in the table, fruits and vegetables show the largest ratio of increase in value from 1899 to 1909, 88.3

per cent. Fish and oysters show an increase of 47 per cent.

The statistics for dried fruits cover the product of fruit drying and packing establishments which buy the fruit or do drying and packing for others, and of cooperative associations, but do not include fruits dried by the grower on the farm. The bulk of the product is from California, the value of the factory dried-fruit product of that state in 1909 being \$16,137,716, or 81.3 per cent of the total value of this class of products.

Salted fish.....	pounds.....	4,630,322
Pickles, preserves, and sauces.....		3,376,137

<sup>2</sup> In addition, 140,263 cases of fruits and vegetables, to the value of \$288,138; 1,847,625 pounds of fish, to the value of \$274,403; and oysters, to the value of \$12,900, were canned and preserved by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>3</sup> Not reported separately.

<sup>4</sup> Not reported.

**Flour-mill and gristmill products.**—Table 36 presents statistics for flour-mills and gristmills, but does not include data for establishments engaged exclusively in custom grinding (see table on p. 513). The total quantity of all kinds of grain milled in 1909 was 806,247,961 bushels, as compared with 729,061,820 bushels in 1899, an increase of 10.6 per cent. The largest increases were in wheat and corn,

the former showing a gain of about 25,000,000 bushels and the latter a gain of about 29,000,000 bushels.

The increase in the value of all products of flour mills and gristmills for the period 1899-1909 was 76.2 per cent. This gain was due mainly to advances in price, for the increases in quantity were relatively much smaller. The value of the wheat flour produced increased 64.7 per cent, but its quantity only 6 per cent, while the production of rye flour increased 54 per cent in value and only 6.2 per cent in quantity. The figures in the table indicate that higher unit values prevailed for all classes of products during 1909 than during the two prior census years. For the decade as a whole the percentage of increase in cost of materials, which constitutes by far the greater part of the value of products, was, however, even higher than that in value of products.

<sup>1</sup> In addition, merchant-ground products, valued at \$1,637,228, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. The items covered by this amount were wheat flour, 105,477 barrels, valued at \$614,952; corn meal, 32,804 barrels, valued at \$87,507; rye flour, 2,620 barrels, valued at \$12,330; feed, 33,765 tons, valued at \$907,165; and offal, 627 tons, valued at \$15,274; and in addition, "breakfast foods," to the value of \$36,978,613, were made by establishments engaged primarily in the manufacture of food preparations. See note to table on page 513, for custom ground by-products.

<sup>2</sup> In addition, "breakfast foods," to the value of \$23,904,952, were made by establishments engaged primarily in the manufacture of food preparations.

<sup>3</sup> Not reported separately.

**Rice, cleaning and polishing.**—The following table presenting statistics for the cleaning and polishing of

rice includes the quantity of rice milled, whether on a custom or exchange basis or in merchant mills. In 1909 there were 974,747,475 pounds of rice treated, as compared with 398,602,018 pounds in 1899, an increase of 144.5 per cent. The amount for 1909, however, was a little less than that for 1904. In 1909 there were only 3,873,735 pounds of foreign rough rice treated, as against 39,414,459 pounds in 1899. Attention is called to the fact that in 1909 whole rice formed 76.3 per cent of the total quantity of cleaned rice and broken rice 23.7 per cent, whereas in 1904 whole rice formed 65.9 per cent and broken rice 34.1 per cent of the cleaned-rice product.

<sup>2</sup> Not reported separately.

**Slaughtering and meat packing.**—Table 38 presents statistics for the wholesale slaughtering and meat-packing industry. It includes the manufacture of sausage when done in connection with slaughtering or meat packing or when carried on in independent establishments, but it does not include the rendering of lard in independent establishments or the operations of retail butchers. The cost of all materials reported for the industry was \$1,202,827,784 in 1909 and \$685,310,099 in 1899, an increase of 75.5 per cent. The total value of products increased from \$788,367,647 in 1899 to \$1,370,568,101 in 1909, or 73.8 per cent.

A portion of the dressed meat reported as material was obtained from slaughtering establishments included in the tabulation, and therefore is duplicated in the total value of products.

On account of the higher prices in 1909, the percentages of increase in value from 1899 to 1909 for the different kinds of products are somewhat greater than the percentages of increase in quantity. This is

especially marked in the case of pork, which shows an increase of only 16,421,398 pounds, or less than 1 per cent, from 1899 to 1909, while the value of the product

increased \$166,376,042, or 51.9 per cent. The quantity of lard increased 223,785,765 pounds, or 21.9 per cent, while its value increased \$73,256,353, or 119.8 per cent.

<sup>2</sup> Includes only the products specified.

**Sugar.**—Tables 39, 40, and 41 show the quantity and value of the products made from sugar beets and sugar cane of domestic growth, and the quantity of beets grown and the acreage devoted to this crop. They do not include statistics for maple sugar and sirup, or for sirup produced on farms from sugar and sorghum cane, or the data for establishments engaged primarily in the refining of cane sugar or molasses. The value of products of the domestic beet-sugar and cane-sugar mills amounted to \$77,991,683. In 1909 the value of products of the refineries above mentioned aggregated \$248,628,659. Of this value the cost of materials, which consist chiefly of raw sugar imported from Cuba, Porto Rico, Hawaii, and the Philippines, represented 90.9 per cent. The

combined value of products of all establishments producing raw or refined sugar was \$326,620,342 in 1909. This amount includes some duplication in the case of raw sugar produced by cane mills and used as material for the refineries.

As shown by Tables 39, 40, and 41, the total production of sugar in 1909 from beets and cane of domestic growth was 828,540 tons, of which beet sugar constituted 60.6 per cent and cane sugar 39.4 per cent. The output of beet sugar increased more than five-fold in quantity since 1899, while the production of cane sugar, for which statistics for previous censuses can not be presented in comparable form, has increased but slightly. The ton of 2,000 pounds is used in showing quantities.

<sup>4</sup> Includes 2,115 officers and clerks whose salaries were not reported.

<sup>5</sup> Not reported fully.

The combined products of the industry in 1909 were valued at \$1,684,636,499, an increase of \$744,583,811, or 79.2 per cent, over the total for 1899. The total includes considerable duplication of values, but probably no more, relatively, than at previous censuses.

The percentage of increase since 1899 is the highest for any decade since that from 1859-1869. In 1909

Table 41 PRODUCT.	1909
Total value.....	\$30,620,788
Sugar: <sup>1</sup>	
Tons.....	326,858
Value.....	\$26,095,673

Sirup (liquid product from which no sugar has been extracted):	
Gallons.....	1,448,690
Value.....	\$30,620,788
All other products <sup>2</sup> .....	\$1,313,574

<sup>1</sup> Does not include the operations of four establishments which manufacture sugar, two of which were operated in connection with penal institutions and two of which were engaged primarily in the manufacture of products other than those covered by the industry designation. The output of these establishments was 7,281 tons of sugar and 693,302 gallons of molasses.

<sup>2</sup> Cane sugar manufactured direct from cane, not including the refining of raw sugar purchased.

<sup>3</sup> The value of sirup produced by establishments which manufacture no sugar is included under "All other products."

### TEXTILES.

Statistics are presented for several branches of the textile and allied manufacturing industries, designated as follows: Carpets and rugs, other than rag; cordage and twine and jute and linen goods; cotton goods, including cotton small wares; hats, fur-felt; hosiery and knit goods; oilcloth and linoleum; shoddy; silk and silk goods, including throwsters; and woolen, worsted, and felt goods, and wool hats.

Table 42 shows the development of the textile industry since 1850. It covers all the industries mentioned above except the manufacture of fur-felt hats and of oilcloth and linoleum, for which statistics are shown in separate tables, and also includes the dyeing and finishing of textiles.

cotton goods contributed 37.3 per cent of the value of all products represented in the total; the products of the woolen industries, including carpets and rugs, 30.1 per cent; hosiery and knit goods, 11.9 per cent; silk goods, 11.7 per cent; cordage and twine and jute and linen goods, 3.6 per cent; shoddy, four-tenths of 1 per cent; and the dyeing and finishing of textiles by independent establishments, 5 per cent.

The following table gives the number of producing spindles in active textile mills at the time of each census from 1869 to 1909, inclusive. It does not include spindles in establishments engaged primarily in the manufacture of products other than textiles, nor spindles employed on flax, hemp, jute, and allied fibers, of which latter class 142,169 were returned in 1909.

CENSUS.	NUMBER OF SPINDLES.				
	Total.	Cotton.	Silk.	Woolen.	Worsted.
1909 (census of 1910)...	33,866,479	28,178,862	1,777,962	2,156,849	1,752,806
1904 (census of 1905)...	28,721,742	23,672,064	1,394,020	2,456,339	1,199,269
1899 (census of 1900)...	23,901,557	19,463,984	1,213,493	2,229,181	994,899
1889 (census of 1890)...	18,092,133	14,384,180	718,360	2,332,260	657,324
1879 (census of 1880)...	13,170,743	10,653,435	262,312	1,915,070	339,926
1869 (census of 1870)...	9,338,953	7,280,800	12,040	1,845,496	200,617

<sup>1</sup> Includes some accessory spindles, except for silk.

The percentage of increase in the total number of spindles was greater from 1899 to 1909 than for any other decade shown. In 1909 cotton spindles formed 83.2 per cent of the total number, silk spindles 5.2 per cent, and woolen and worsted spindles combined 11.5 per cent. In 1909 cotton spindles represented a slightly larger proportion of all spindles than in 1904 and 1899 and woolen and worsted spindles a slightly smaller proportion.

The loom equipment of active establishments at the time of the several censuses, beginning with that of 1869, is presented in the following table. It does not include looms in establishments engaged primarily in the manufacture of products other than textiles, nor looms employed on flax, hemp, jute, and similar fibers. Cotton looms operated by power formed 80.6 per cent of the total number of power looms in 1909; silk looms, 9.1 per cent; and those employed in the woolen industry, which includes the manufacture of woolen and worsted goods and carpets and rugs, 10.2 per cent. In 1899 the corresponding percentages were 79.5 for cotton looms, 7.7 for silk, and 12.8 for those in the woolen industries.

CLASS OF LOOMS AND POWER.	NUMBER OF LOOMS.

<sup>1</sup> In addition, in 1909 carpets and rugs, to the value of \$479,161, and in 1904, to the value of \$70,000, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Includes Wilton velvet.

<sup>3</sup> Not reported separately.

<sup>4</sup> Not reported fully.

The aggregate production of carpets and rugs increased from 76,410,050 square yards in 1899 to 81,218,881 square yards in 1909, or only 6.3 per cent, but the value of the output increased from \$43,551,158 in 1899 to \$66,966,338 in 1909, or 53.8 per cent. The increase has been in all classes of rugs except Smyrna and "other rugs" and in all classes of carpets except ingrain. The cost of materials used increased at a rate almost equal to that of the value of products. The total carpet product decreased 11 per cent in quantity during the decade, but increased 36.9 per cent in value. The output of pile carpets increased 61.9 per cent in quantity and 98.3 per cent in value, while that of woven ply or ingrain carpets decreased 55.4 per cent in quantity and 53 per cent in value. The production of rugs woven whole increased 97.5 per cent in quantity and 127 per cent in value. More than two-thirds of the fiber material used in the manufacture of carpets is yarn purchased, and to the extent that this yarn is manufactured by carpet mills there is a duplication in the products.

**Cordage and twine and jute and linen goods.**—Table 46 presents statistics for the manufacture of cordage and twine and jute and linen goods, including nets and seines, but does not include the figures for these classes of goods produced in penal institutions or in establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

The principal products manufactured in this country from flax, hemp, and jute fibers are twine, rope, and thread, and yarns for sale to establishments using chiefly cotton, wool, and silk fibers.

The production of linen toweling and other linen woven goods increased decidedly between 1899 and 1909, but this item is not shown separately in the table, because a very large proportion of the total product is manufactured by one establishment.

The output of gunny-bagging decreased from 74,090,760 square yards in 1899 to 69,311,288 square yards in 1909, while its value increased from \$3,462,479 to \$3,507,482. The aggregate rope and twine product in 1909 was 504,020,697 pounds, valued at \$42,864,658, as compared with 343,656,384 pounds, valued at \$31,250,468, in 1899. In 1899 cotton rope and twine formed 3 per cent of the total output of the cordage and twine industry, and in 1909, 7.4 per cent. This class of products increased 260.6 per cent in quantity and 372.9 per cent in value during the decade, while rope and twine of all other fiber increased 40 per cent in quantity and 21.6 per cent in value. In addition to the cotton rope and twine product included in the figures given above, 21,319,678 pounds, valued at \$3,581,917, were made in 1909 in mills engaged primarily in the manufacture of cotton goods.

<sup>1</sup> In addition, cordage and twine and jute and linen goods to the value of \$890,629 were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Not reported.

**Cotton goods, including cotton small wares.**—Table 47 presents the statistics for cotton manufactures, not including cotton hosiery and knit goods.

The aggregate value of cotton woven goods manufactured, exclusive of narrow weaves, such as tape and webbing, was \$456,089,401 in 1909, compared with \$243,253,155 in 1899, an increase of 87.5 per cent for the decade. The rate of increase, however, in quantity was very much less, 6,348,568,593 square yards of woven goods being reported in 1909, compared with

4,523,430,616 in 1899, an increase of 40.3 per cent. The output of almost every class of woven goods increased during the decade.

The total production of yarn in cotton mills in 1909 was 2,040,290,743 pounds, of which 470,370,995 pounds, valued at \$109,314,953, were made for sale. Part of this yarn was sold to other cotton mills, thus involving duplication in the total value of products for the industry. Some of it was sold to woolen and silk mills and a large quantity to knitting mills.

\* In addition, cotton goods to the value of \$2,224,096 were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

† Not reported separately.

**Felt goods.**—Table 48 covers the statistics for all establishments engaged primarily in the manufacture of felt goods except those making hats. The aggregate value of products of the three felting industries—the manufacture of felt goods, fur-felt hats, and wool-felt hats—was \$64,099,667 in 1909, \$48,035,213 in 1904, and \$37,864,818 in 1899, the increase in value from 1899 to 1909 being 69.3 per cent.

The value of products for the felt-goods industry, exclusive of the making of felt hats, was \$11,852,626 in 1909 and \$6,461,691 in 1899, an increase for the decade of 83.4 per cent.

The increase in the production of endless belts during the decade was particularly large, amounting to 191 per cent in quantity and 215.1 per cent in value.

<sup>1</sup> Not fully reported.

**Hats, fur-felt and wool-felt.**—The total output in 1909 of establishments engaged primarily in the manufacture of fur-felt or wool-felt hats was 42,962,508 hats of all varieties, valued at \$47,089,253; in 1904 it was 36,695,952 hats, valued at \$36,604,304; and in 1899, 32,325,564 hats, valued at \$28,546,867. Fur-felt hats, generally known as felt hats, formed 83.5 per cent of the total number in 1909 and 69.9 per cent in 1899, while wool-felt hats, generally known as wool hats, formed 16.5 per cent of the total in 1909 and 30.1 per cent in 1899.

There is some duplication in value of products, due to the use of felt hat bodies and hats in the rough made at one establishment as material at another.

The following table gives the quantity and value of the materials and products of the fur-felt hat industry in 1909, 1904, and 1899. The products increased in value 72.1 per cent during the decade, and the number of finished hats increased 58.8 per cent.

<sup>1</sup> In addition, in 1909, fur-felt hats, to the value of \$806,601, and in 1904, to the value of \$333,441, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

The statistics for the manufacture of wool-felt hats are given in the following table. The increase in the total value of all products for the decade was 22.1 per cent. The output of finished wool hats in 1909, though greater than in 1904, showed a decrease of 27.2 per cent as compared with 1899.

<sup>1</sup> In addition, wool-felt hats, to the value of \$904,643, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

**Hosiery and knit goods.**—Table 51, presenting the statistics for hosiery and knit goods, includes hand-knit as well as machine-knit goods.

The total cost of materials in the hosiery and knit-goods industry was \$110,241,053 in 1909, \$76,789,348 in 1904, and \$51,195,330 in 1899. The cost of cotton and cotton yarn represented 51.7 per cent of the total cost of material used in 1909, 52.4 per cent in 1904, and 50.3 per cent in 1899. A portion of the yarn reported as material was purchased from other establish-

ments included in this classification and is therefore duplicated in the value of products. The increase in the total cost of materials in 1909 over the cost for 1899 was 115.3 per cent, and the increase in the total value of products was 108.8 per cent. Of the total value of the products, shirts and drawers contributed 34.8 per cent in 1909 and 47.7 per cent in 1899, while hosiery contributed 34.3 per cent in 1909 and 28.6 per cent in 1899. The hosiery product increased in value from

\$27,420,029 in 1899 to \$68,721,825 in 1909, or 150.6 per cent, and shirts and drawers from \$45,675,594 to \$69,592,817, or 52.4 per cent. Sweaters, cardigan jackets, etc., show the largest relative increase in value for the decade, and combination suits the next largest, the value of the former increasing from \$3,498,837 to \$22,430,817, or more than fivefold, and that of the latter from \$3,691,847 to \$14,853,536, or about threefold.

<sup>1</sup> Not reported.

<sup>2</sup> In addition, in 1909, hosiery and knit goods, to the value of \$2,975,749, and in 1904, to the value of \$1,579,633, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

**Oilcloth and linoleum.**—Table 52 presents the statistics of the production of oilcloth, linoleum, and artificial leather. Artificial leather, which at former censuses was included under upholstering materials, was reported separately for the first time at the census of 1909. At the census of 1899 oilcloth and linoleum were not reported in detail, but the total value of these products was \$11,402,620. This had

increased to \$13,977,137 in 1904 and to \$22,525,940 in 1909. The production of oilcloth in 1909 was in the aggregate 96,862,068 square yards and in 1904 71,057,684 square yards, an increase for the five years of 36.3 per cent. The linoleum product increased relatively much more; it amounted to 30,676,254 square yards in 1909 and 16,891,462 square yards in 1904, an increase of 81.6 per cent.

All other products.....	\$279,239	\$815,109

<sup>1</sup> In addition, products to the value of \$33,328 were reported by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. The production of artificial leather is included under "upholstering materials" in Table 110.

<sup>2</sup> Figures not available.

**Shoddy.**—The statistics given in the following table relate only to establishments primarily engaged in the manufacture of shoddy, mungo, and wool extract, and do not include those for spinning and weaving mills and hosiery and knit-goods factories which manufacture shoddy for their own use or for sale. Mills engaged in the cutting of flocks and the cleaning and garnetting of waste are included, as in previous censuses. The total cost of materials used was \$5,000,706 in 1909, and the total value of the products was \$7,446,364, both of these amounts being somewhat larger than in 1899 but smaller than in 1904. The total output of the products specifically classified was 57,888,999 pounds in 1909, 63,787,770 pounds in 1904, and 47,684,714 pounds in 1899.

<sup>1</sup> Does not include waste, noils, etc.

<sup>2</sup> Not reported separately.

<sup>3</sup> In addition, silk and silk goods to the value of \$1,218,101 were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

The increase in the cost of materials and in the value of products for the period 1899–1909 was 72.7 and 83.6 per cent, respectively. Considerable duplication occurs in the total cost of materials and in the total value of products shown in the preceding table. To eliminate this duplication the following method may be used: (1) organzine and tram, reported as material and product, is deducted from both materials and products, respectively; (2) spun silk, reported as a product, is deducted from both materials and products; (3) fringe and floss, reported as material, is deducted from both materials and products; and (4) amount received for contract work, reported as product, is deducted from products.

The total production of broad weaves in 1909 was 198,787,027 running yards, single width, valued at \$115,136,724, compared with 97,940,935 yards, valued at \$58,122,622, in 1899, the increase in quantity being 103 per cent and that in value 98.1 per cent. Broad silks formed over nine-tenths of all broad weaves in 1909, the increase in the output between 1899 and 1909 being 111.9 per cent. The increase in the output of all other broad weaves combined—velvets, plushes, tapestries, and upholsteries—was only 26.9 per cent.

In 1899 all-silk goods constituted 78.1 per cent of the broad-silk product, and silk-mixed goods 21.9 per cent, whereas in 1909 the proportion for the latter had risen to 38.1 per cent and that for the former had fallen to 61.9 per cent. The change was due to an increase during the decade of 268.9 per cent in the output of silk-mixed broad silks, while that for all-silk was only 67.9 per cent.

Between 1899 and 1909 the rate of increase in the

output of broad woven silk goods was much greater than that for either broad woven cotton or broad woven woolen goods, the increases for the three classes being 103, 40.3, and 33.8 per cent, respectively.

**Woolen and worsted goods.**—The following table presents statistics for establishments engaged primarily in the manufacture of woolen and worsted goods. The total value of products for the industry involves considerable duplication, due to the use of partly finished products of some establishments as material for others. In 1909 the establishments in this industry produced 570,743,797 square yards of woven goods, exclusive of upholstery goods and sundries, compared with 505,821,956 square yards in 1904 and 426,572,856 in 1899; the increase for the decade being 33.8 per cent. The value of these goods was \$296,447,594 in 1909, \$234,737,036 in 1904, and \$183,306,664 in 1899, an increase for the decade of 61.7 per cent. The highest rate of increase was reported for the all-wool woven group, the output of which increased 49.3 per cent in quantity. The output of unions decreased decidedly, while that of cotton-warp woven goods increased 37.6 per cent in quantity. The all-wool yardage constituted 56.6 per cent of the total in 1909 and 50.7 per cent in 1899, while the union yardage constituted 6.6 per cent of the total in 1909, as compared with 13.4 per cent in 1899. Cotton-warp fabrics formed about the same proportion of the total in both years—somewhat over one-third. There has thus been a considerable shift during the decade from the manufacture of cotton-mixed to that of all-wool goods.

\* Cards not fully reported.

## IRON AND STEEL.

Tables 56 to 61, inclusive, present statistics for blast furnaces, steel works and rolling mills, tin and terne plate plants, and wire mills. In many establishments other industries are carried on in connection with the operations of steel works and rolling mills. In these cases a separation of the data for the industries as defined by the Census Bureau was secured by taking separate reports for the different departments of the respective establishments. In this way the statistics for blast furnaces operated in connection with steel

works were segregated and combined with those for furnaces independently operated, and the statistics for the tin and terne plate dipping departments of establishments which also roll the black plate were separated and combined with those for establishments which dip only purchased plate. Statistics for the finished wire products of mills which roll wire rods as well as draw wire and manufacture wire nails, fencing, etc., were secured and are given in combination with those for wire mills which manufacture only from purchased wire rods. The finished wire products manu-

factured in rolling mills are, however, included in the products of these mills, so that the statistics for wire mills and rolling mills to this extent duplicate each other. It should also be explained that the rolling-mill departments of tin and terne plate establishments are credited with their entire output of black plate, as if it were produced for sale instead of for further treatment at the same establishment.

**Blast furnaces.**—The statistics for the blast-furnace industry are given in the following table.

In 1909, 25,651,798 tons of pig iron, valued at \$387,830,443, were produced and in 1899, 14,447,791 tons, valued at \$206,512,755, the increase in quantity during the decade being 77.5 per cent and that in value 87.8 per cent. Since 1904 was a year of par-

tial depression in the iron and steel industry and the pig-iron product was less in that year than in 1903 or 1902, neither the small increases shown in quantity and value for 1904 as compared with 1899 nor the large increases shown for 1909 as compared with 1904 are representative of the normal rate of growth for the industry. Features in the development of the industry are the increase in the proportion of pig iron produced for consumption in other departments of the works of the producing company and the increase in the proportion of the product passed on in a molten condition to undergo further processes without being cast into pigs. The *ton of 2,240 pounds* is used in showing quantities except when otherwise stated.

<sup>1</sup> Not including the statistics for a blast furnace operated by a penal institution.

<sup>2</sup> The figures for 1909 cover fuel for smelting only; those for 1904 and 1899 include fuel for steam raising.

<sup>3</sup> Not including 2,486,700 bushels of charcoal and its value, the cost of stumpage and labor being reported as expense.

<sup>4</sup> Coal and coke mixed, 86,420 tons; balance coke.

<sup>5</sup> Includes 52,992 tons of mixed charcoal and coke pig iron.

<sup>6</sup> Not reported.

**Steel works and rolling mills.**—Table 57 presents comparative statistics of steel works and rolling mills, including those of forges and bloomeries. Section I of the table deals with materials. The second section deals with products. It shows separately each of the products properly designated as rolled and forged steel

and iron, but contains also a miscellaneous item, which includes the value added to such products in their conversion into more highly manufactured articles by the same establishment, so that the total includes the entire value of output of the establishments in the industry. This total and also the separate total for

rolled and forged products alone include no duplication of quantity or value of products within any given establishment itself, but there is considerable duplication due to the use of the product of one establishment as raw material for another establishment, whether the latter be owned by a separate concern or by the same company.

Section III of the table, headed "Steel," gives the entire quantity of crude steel produced by the steel works, including that subjected to further processes of manufacture whether by the establishment in which produced or by other establishments. The value of this steel appears, therefore, distributed among various items under Section II. Section IV of the table gives in detail the quantity and value of the more highly elaborated products made by the rolling mills themselves from the rolling-mill products specified in Section II. The entire value of these products appears in Section II, either as part of the various items of rolled products or in the miscellaneous item of value added to rolling-mill products by further manufacture. The fifth section of the table deals with products sold for export by rolling-mill concerns; it includes only the products so sold directly by the establishments producing them and not such as may be sent abroad by others who purchase from the manufacturer. The sixth section deals with equipment.

In 1909 the rolled, forged, and cast-steel products specifically classified aggregated 26,723,274 tons, valued at \$863,342,711, and in 1899, 15,055,626 tons, valued at \$510,906,040, the increase in tonnage being 77.5 per cent and in value 69 per cent. The *ton of 2,240 pounds* is used in showing quantities except when otherwise stated.

Tons.....	106,352	99,530	( <sup>2</sup> )
Value.....	\$2,683,017	\$2,480,328	( <sup>2</sup> )
Rail fastenings (splice bars, tie-plates, fishplates, etc.)—			
Tons.....	396,911	174,055	( <sup>2</sup> )
Value.....	\$14,488,412	\$5,663,052	( <sup>2</sup> )
Structural shapes, not including plates used for making girders—			
Tons.....	2,123,630	954,537	856,983
Value.....	\$65,664,593	\$32,730,901	\$29,361,522
Steel—			
Tons.....	2,102,300	950,062	829,692
Value.....	\$64,853,466	\$32,555,701	\$28,309,966
Open-hearth—			
Tons.....	1,634,230	618,391	568,092
Value.....	\$59,789,948	\$21,496,531	\$19,928,249
Bessemer—			
Tons.....	168,070	331,671	263,800
Value.....	\$5,063,518	\$11,089,170	\$8,381,717
Iron—			
Tons.....	21,330	4,475	27,091
Value.....	\$711,127	\$145,200	\$1,051,556
Bars and rods, including merchant, shovel, finger and horse-shoe bars, spike, chain bolt, and nut rods, etc. (but not including wire rods, sheet and tin-plate bars, splice bars, and bars for reinforced concrete):			
Tons.....	3,784,248		
Value.....	\$121,488,423	2,442,810	2,493,159
Bars for reinforced concrete:			
Tons.....	191,358	\$84,069,122	\$100,597,221
Value.....	\$5,583,963		
Wire rods:			
Tons.....	2,295,279	1,792,704	918,587
Value.....	\$61,947,958	\$52,995,031	\$35,529,529
Plates and sheets, not including black plates or sheets for tinning, nail and tack plates, tie-plates, fishplates or armor plates:			
Tons.....	3,332,733	1,856,469	1,488,066
Value.....	\$133,272,393	\$77,802,001	\$68,109,223
Black plates, or sheets, for tinning:			
Tons.....	631,435	504,025	394,014
Value.....	\$30,955,967	\$25,297,079	\$20,937,806
Skelp, flue and pipe:			
Tons.....	2,084,286	1,557,690	
Value.....	\$64,514,728	\$46,780,202	1,195,189
Hoops, bands, and cotton ties:			
Tons.....	341,043	837,223	\$49,159,747
Value.....	\$10,429,681	\$12,700,010	
Nail and tack plates:			
Tons.....	68,557	86,601	97,664
Value.....	\$2,540,022	\$2,462,076	\$3,116,558
Axles, car, locomotive, automobile, wagon, carriage, etc., rolled or forged:			
Tons.....	102,348	83,585	102,606
Value.....	\$3,831,844	\$2,876,829	\$4,482,987
Armor plates, gun forgings, and ordnance:			
Tons.....	26,845	24,433	15,302
Value.....	\$10,649,079	\$10,549,620	\$7,526,479
Blooms, billets, and slabs, produced for sale or for transfer to other works of same company:			
Tons.....	4,887,796		
Value.....	\$108,514,747		
Rolled forging blooms and billets produced for sale or for transfer to other works of same company:			
Tons.....	84,383	4,823,585	4,172,286
Value.....	\$2,247,133	\$109,611,104	\$96,321,887
Sheet and tin-plate bars produced for sale or for transfer to other works of same company:			
Tons.....	1,652,761		
Value.....	\$37,745,269		
Muck and scrap bar produced for sale or for transfer to other works of same company:			
Tons.....	174,496	150,926	203,681
Value.....	\$4,986,211	\$3,940,998	\$5,940,587
All other rolled steel or iron:			
Tons.....	566,627	377,665	506,890
Value.....	\$39,570,061	\$16,743,727	\$19,202,606

Cut nails and spikes:							
Kege (100 pounds).....	1,009,319	1,311,549	1,658,443				
Value.....	\$2,218,207	\$2,394,108	\$3,292,063				

† Not reported.

The following table gives, for 1909, statistics of materials consumed, classified as purchased or as produced by the establishment consuming, and statistics of products, classified as sold or as consumed by the establishment producing. This information was not secured at former censuses. Eighty per cent of the pig iron used was made in blast furnaces operated by the consumer. The difference between the 15,252,736 tons of pig-iron material reported as produced by the consumer and the 15,858,203 tons reported in the table for blast furnaces as made for consumption in works of the producer—a little over 600,000 tons—represents the consumption in foundries and other shops owned by the producing companies but not covered by the preceding table.

Table 58

MATERIAL.	QUANTITY (TONS).

Scrap.....	6,364,647	5,126,093	398,436	840,118

**Tin and terne plate.**—The statistics for the tin and terne plate industry are given in the following table. Nearly 98 per cent of the black plates dipped were rolled by the establishment reporting. The value of all products was \$47,969,645 in 1909 as compared with \$31,892,011 in 1899, an increase of 50.4 per cent. The development of the tin and terne plate

industry has taken place almost entirely within the last 20 years, the production in 1891 being only about 2,236,000 pounds, or less than one five-hundredth of the 1909 output.

<sup>1</sup> Domestic; no foreign plates reported; includes 8,726,538 pounds of iron plates; balance steel, not distributable by kind of steel.

<sup>2</sup> Includes 83,900 pounds of foreign plates, costing \$3,769; the domestic plates reported were distributed by kind as follows: Bessemer steel, 911,003,989 pounds; open-hearth steel, 106,911,401 pounds; iron, 949,367 pounds.

<sup>3</sup> Includes 2,358,607 pounds of foreign plates, costing \$78,282.

<sup>4</sup> Not reported.

<sup>5</sup> Consumption of establishments not equipped for the manufacture of black plates.

<sup>6</sup> Terne mixture purchased not reported separately; contents reported as tin and lead.

<sup>7</sup> In addition 3,389,200 pounds of tin and terne plate and taggers tin, valued at \$398,143, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>8</sup> Includes idle establishments.

**Wire.**—The following table presents the statistics for wire manufactures in 1909. Comparable statistics in detail for 1904 and 1899 are not available for the total wire production, as special reports were not secured prior to the present census from wire mills drawing wire from purchased rods. The total value of the steel and iron wire product more than doubled from 1899 to 1909. The total value of all wire and manufactures of wire reported in 1909 was \$173,349,614, of

which 69.6 per cent represents the value of products made from steel and iron, 27.2 per cent that of products made from copper, and 3.2 per cent that of products made from other metal, chiefly brass. Establishments rolling wire from rods manufactured by them reported 54.3 per cent of the wire products in value, and mills drawing wire from purchased rods produced 45.7 per cent. The *ton of 2,000 pounds* is used in showing quantities.

#### LEATHER AND ITS PRODUCTS.

The primary or underlying industry of this group is the converting of hides and skins into leather by the various processes of tanning, tawing, currying, and finishing. The designation employed for this industry is "leather, tanned, curried, and finished." The group also includes the manufacture of boots and shoes and the manufacture of leather gloves and mittens.

**Leather.**—The following table gives the statistics of the leather industry in detail for 1909, 1904, and 1899.

The number of hides and skins treated, including those treated as custom work for others not tanners, curriers, or finishers, as well as those used in further manufacture by the establishments treating them, was 146,328,586 in 1909 and 131,011,956 in 1904. Comparative figures for this aggregate for 1899 are not available. Exclusive of custom work, 116,040,986 hides and skins, costing \$195,058,557, were treated by tanneries in 1909, and 99,709,343, costing \$123,545,969, in 1899, the increase in number being 16.4 per cent and that in cost 57.9 per cent. The increase for the decade in the number of hides used was 15.9 per cent;

that in calf and kip skins, 120.6 per cent; that in sheepskins, 6.4 per cent; and that in goatskins, less than 1 per cent.

The cost of purchased rough leather used increased 43.4 per cent and that of all other materials, which include tanning and finishing materials, 76.1 per cent.

The value of leather manufactured in 1909 was \$306,476,720, as compared with \$194,202,063 in 1899, an increase of 57.8 per cent, which is practically the same as the percentage of increase in the cost of hides and skins treated. There is considerable duplication in the value of products, due to the sale of leather in the rough as product of one establishment and its use as material in another.

<sup>1</sup> In addition, in 1909, 1,903,278 hides and 27,936,887 skins and in 1904, 961,431 hides and 21,792,110 skins, were treated for others, not tanners, curriers, or finishers; and in 1909, 252,639 hides and 194,796 skins and in 1904, 12,453 hides and 39,235 skins were treated by establishments using the leather for further manufacture.

<sup>2</sup> Cattle hides only.

<sup>3</sup> Includes horsehides.

<sup>4</sup> In addition, in 1909, leather to the value of \$6,231,374, and in 1904 to the value of \$154,932, was tanned, curried, or finished and consumed by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>5</sup> Not reported separately.

**Boots and shoes.**—The full designation for this industry is "boots and shoes, including cut stock and findings." The total value of products was \$512,797,642 in 1909, as compared with \$357,688,160

in 1904 and \$290,047,087 in 1899, an increase for the decade of \$222,750,555, or 76.8 per cent. In addition, in 1909 there were boot and shoe products to the value of \$1,439,280, and in 1904 to the value of \$89,000,

made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. The schedule employed did not call for segregation of value of products. The following table shows the number of pairs of the different kinds of shoes and slippers reported at each of the last three censuses.

IND.	NUMBER OF PAIRS.		
	1909	1904	1899
Boots and shoes.....	247,643,197	216,039,401	195,589,173
Men's.....	93,888,892	83,434,322	67,742,839
Boys' and youths'.....	23,838,626	21,717,236	21,030,479
Women's.....	86,595,314	69,470,876	64,972,653
Misses' and children's.....	43,320,365	41,416,967	41,843,202
Slippers.....	17,507,834	17,518,291	17,092,841
Men's, boys', and youths'.....	4,802,841	4,403,097	4,446,965
Women's, misses', and children's.....	12,704,993	13,115,194	12,645,876
Infants' shoes and slippers.....	15,000,721	( <sup>1</sup> )	( <sup>1</sup> )
All other.....	4,865,429	8,552,343	5,283,405

<sup>1</sup> Not reported separately.

There were 247,643,197 pairs of boots and shoes manufactured in 1909, 216,039,401 pairs in 1904, and

195,589,173 pairs in 1899, the increase being 26.6 per cent for the decade and 14.6 per cent for the 1904-1909 period. In 1909 men's boots and shoes formed 37.9 per cent of the total number of boots and shoes; women's, 35 per cent; misses' and children's, 17.5 per cent; and boys' and youths', 9.6 per cent.

The total output of slippers reported for 1909 was 17,507,834 pairs, practically the same as at each of the two preceding censuses. The figures indicate a considerable decrease since 1904 in women's, misses', and children's slippers, but it is probable that infants' shoes and slippers, reported separately in 1909, were to some extent included with children's slippers in 1904.

The number of pairs of the different kinds of boots, shoes, and slippers manufactured by the various methods was reported for the first time in 1909, and is shown in the next table. Of the total number manufactured, 43.2 per cent were of the McKay type, 35.3 per cent machine or hand welt, 10.6 per cent turned, 8.8 per cent wire-screw or metal-fastened, and 2.1 per cent wooden-pegged.

IND.	NUMBER OF PAIRS.					
	Total.	Machine or hand welt.	Turned.	McKay.	Wooden-pegged.	Wire-screw or metal-fastened.
Boots and shoes.....	247,643,197	87,391,763	26,317,990	107,063,644	5,226,161	21,643,639

	Value.....	\$1,718,198	\$1,030,843	\$1,247,916
Unlined—				
	Dozen pairs.....	417,201	213,370	337,181
	Value.....	\$3,746,866	\$1,576,159	\$2,222,342
All other products.....		\$1,104,737	\$617,613	\$886,988

<sup>1</sup> In addition, in 1909, 36,944 dozen pairs of gloves, mittens, and gauntlets, to the value of \$264,961; in 1904, gloves, mittens, and gauntlets, to the value of \$166,164; and in 1899, gloves, mittens, and gauntlets, to the value of \$217,157, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Includes 24,004 dozen pairs of gauntlets, valued at \$150,652, not distributed by kinds.

The greater increase in value was due to the higher prices paid for hides and skins, and an increased production of the better grades of gloves.

The number of men's gloves manufactured largely outnumbered that of women's and children's at each census, but importations of kid gloves for women probably greatly reduce the demand for American makes. The number of men's gloves increased during the decade 14.1 per cent, and the number of women's and children's 29.5 per cent.

#### CHEMICALS AND ALLIED PRODUCTS.

The industries in this group comprise those which produce chemicals as products or which employ to a large extent chemical processes in manufacture. The grouping is necessarily somewhat arbitrary. Separate tables present the statistics for each of the following industries:

Chemicals.	Oil, essential.
Coke.	Paint and varnish.
Dyestuffs and extracts.	Petroleum, refining.
Explosives.	Salt.
Fertilizers.	Soap.
Gas, illuminating and heating.	Sulphuric, nitric, and mixed acids.
Glucose and starch.	Turpentine and rosin.
Oil, cottonseed, and cake.	

**Chemicals.**—Table 66 presents the statistics for the general chemical industry as classified by the Bureau of the Census, but reference should be made to the groups and items specified in the table for information as to the products included under this head. It does not include products listed independently in the preceding paragraph, nor does it include the products of wood distillation or chemicals made by establishments engaged in the manufacture of pharmaceutical preparations.

The value of all products of the "chemical" industry, including the same commodities made by establishments engaged primarily in the manufacture of other products, was \$126,794,345 in 1909 and \$78,285,646 in 1904. The products of establishments classified as chemical factories proper were valued at \$117,688,887 in 1909 and \$48,039,595 in 1899, an increase for the decade of \$69,649,292, or 145 per cent. Some of the groups show very large gains, notably products made with the aid of electricity, many of which can not be shown separately without disclosing individual operations. The value of these products increased from \$1,305,368 in 1899 to \$17,968,277 in 1909 and the value of the output of sodas, the leading group of products in this respect, increased from \$11,596,915 to \$21,417,982.

The value of the sulphuric, nitric, and mixed acid product, shown in Table 80, should be added to the value of the acids given in the following table in order to ascertain the total production of the principal acids. Including these acids, the value of the acid product (not including acids consumed by establishments making the same or those produced as by-products of other industries) was \$19,493,663 in 1909, \$14,538,137 in 1904, and \$9,371,615 in 1899, the increase for the decade being 108 per cent. The *ton of 2,000 pounds* is used in showing quantities.

<sup>4</sup> Not reported separately.

<sup>5</sup> See chemical substances produced by the aid of electricity for additional product.

<sup>6</sup> Not reported.

**Coke.**—Table 67, which presents the statistics for the manufacture of coke, does not include those for gas-house coke, which are shown in Table 71. The total production of coke, including gas-house coke sold and that made and consumed in gas manufacture, was 41,947,949 tons in 1909 as compared with 27,857,441 tons in 1904, an increase of 50.6 per cent. The gas-house coke included in these figures formed 6.3 per cent of the total product in 1909 and 9.9 per cent in 1904.

The value of all products of the coke industry proper was \$98,078,383 in 1909, \$51,728,647 in 1904, and \$35,585,445 in 1899, an increase for the decade of 175.6 per cent. A marked feature of the industry is the increasing use of retort ovens. Although the

retort coke product was not reported separately in 1899, the by-products of this branch of the industry were given and aggregated \$952,027 in value. In 1909 the value of the retort by-products was \$8,112,900. The value of the coke and by-products made by retort ovens constituted 29.1 per cent of the total value of all products of the industry in 1909. Of the total value of the products made by retort ovens, two-fifths is contributed by the by-products. The ton of 2,000 pounds is used in showing quantities.

<sup>1</sup> Includes coal and coking products produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation, viz: Coal used, unwashed, 566,539 tons, cost, \$1,363,597; products valued at \$2,381,761, comprising retort coke, 415,472 tons, valued at \$1,464,162; tar, 4,398,576 gallons, valued at \$87,639; ammonium sulphate, 9,952,744 pounds, valued at \$235,605; gas sold, 2,160,915 thousand cubic feet, valued at \$534,076; and other products, \$60,280.

<sup>2</sup> In addition, 410,225 tons of coke, valued at \$1,302,572, were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>3</sup> The statement for coke made in gas establishments will be found in detail under the classification "Gas, illuminating and heating."

<sup>4</sup> Not reported.

<sup>5</sup> Reported in part as anhydrous ammonia and in part as ammonium sulphate or reduced equivalents.

**Dyestuffs and extracts.**—The statistics for dyestuffs and extracts given in Table 68 cover the products of establishments manufacturing the same for sale, and do not include those made by dye and print works or tanneries and consumed by the same in further processes of manufacture.

The total value of products was \$15,954,574 in 1909 and \$7,350,748 in 1899, an increase of 117 per cent. The chief products were oak and chestnut extract,

which together increased almost ninefold in quantity and even more in value during the decade. Artificial dyestuffs nearly doubled in quantity and in value, but the production of natural dyestuffs (included under "All other products") has fallen off greatly, the value of the product being \$1,035,711 in 1899 and only \$233,935 in 1904. It was materially less in 1909, but can not be shown separately without disclosing individual operations. The census report on Forest Products for 1909 gives 386,817,895 pounds as the total consumption of tanning extracts in that year, which quantity exceeds the quantity of oak, chestnut, hemlock, and sumac extracts here reported by over 83,000,000 pounds. This difference can be taken as representing approximately the amount of tanning extract imported or made and consumed in tanning establishments.

Table 68	PRODUCT.	1909	1904	1899

All other products <sup>1</sup>	\$1,573,248	\$1,724,298	\$1,730,128	

<sup>1</sup> In addition, dyestuffs and extracts, to the value of \$834,102, in 1909 and \$19,111 in 1904, were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Not reported separately.

<sup>3</sup> Including a small production of natural dyestuffs in 1909, a production in 1904 valued at \$233,935, and a production in 1899 valued at \$1,035,711.

NOTE.—The following products were made and consumed in establishments where produced:

	1909	1904
Ground and chipped wood, pounds.	936,578,482	524,505,744
Ground bark, pounds.	293,062,163	40,390,640
Ground leaves, pounds.	1,955,040	3,586,171

**Explosives.**—Table 69 presents the statistics for the explosives industry. The value of all products was \$40,139,661 in 1909 as compared with \$17,125,418 in 1899, an increase of 134.4 per cent.

The production of explosives in the industry proper was 469,481,252 pounds in 1909, 360,980,734 pounds in 1904, and 215,980,720 pounds in 1899, an increase for the decade of 117.4 per cent. If the explosives made by establishments operated by the Federal Government and by establishments engaged primarily in the manufacture of other products be added, the total production in 1909 was 471,181,650 pounds. The output of dynamite formed about three-eighths of the total output of explosives, and its value approximately one-half of the total value of explosives reported. The most important product in respect to quantity of output was blasting powder, including "permissible explosives." Permissible explosives, known in Pennsylvania as safety explosives, were reported separately for the first time in 1909. They are specially designed for use in dusty and gaseous coal mines. The ton of 2,000 pounds is used in showing quantities.

<sup>1</sup> In addition, 1,481,042 pounds, to the value of \$802,948, were made by Federal establishments, and 219,356 pounds, to the value of \$135,979, by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> In addition, 1,104,532 pounds, to the value of \$690,032, were made by Federal establishments and by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>3</sup> Not reported separately.

<sup>4</sup> Includes smokeless powder and guncotton or pyroxylin, to avoid disclosing operations of individual establishments.

NOTE.—The following products were made and consumed in the establishments where produced:

	1909	1904
Saltpeter, pounds.	12,050,225	3,559,376
Nitroglycerin, pounds.	70,289,667	44,077,328
Sulphuric acid, tons.	42,555	30,994
Nitric acid, tons.	31,484	18,988
Charcoal, bushels.	737,884	1,156,918
Cellulose nitrates, pounds.	5,000,226	
Nitrate of ammonia, pounds.	10,904,319	6,299,317

**Fertilizers.**—The following table giving statistics for the fertilizer industry does not include the product of establishments engaged primarily in the manufacture of products other than fertilizers, chief of which are slaughtering and meat-packing establishments and cottonseed-oil mills. The value of all products of the industry proper, which includes some that are not fertilizers, was \$103,960,213 in 1909, as compared with \$44,657,385 in 1899, an increase of 132.8 per cent. Including the fertilizer by-products of other indus-

tries, the total production of fertilizers in 1909 was 5,618,234 tons, valued at \$100,089,971. During the period 1899–1909 the tonnage of the fertilizer products of the establishments engaged primarily in the manufacture of fertilizers increased 87.5 per cent. Some of the materials, such as sulphuric acid, are the products of establishments engaged in this industry, and therefore are duplicated in the total value of products. The *ton of 2,000 pounds* is used in showing quantities.

<sup>1</sup> Includes for 1904, 125,888 tons of ammoniates classified as such, valued at \$2,445,051; cottonseed meal, valued at \$2,376,448; and bones, tankage, and offal, valued at \$5,094,149; and for 1899, cottonseed meal, valued at \$167,410; and bones, tankage, and offal, valued at \$9,766,735.

<sup>2</sup> Not reported.

<sup>3</sup> In addition, in 1909, 231,287 tons of complete fertilizer, valued at \$4,806,832; 49,632 tons of ammoniated fertilizer, valued at \$943,197; 22,615 tons of superphosphates, valued at \$426,302; 63,581 tons of "other" fertilizer, valued at \$1,365,931; 10,955 tons of concentrated phosphate, valued at \$178,078; and other products to the value of \$190,928; and in 1904, fertilizers, to the value of \$2,069,714, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

**Gas, illuminating and heating.**—The statistics for the gas industry presented in Table 71 include only those establishments which made gas as their main product. The total production of gas made for sale by such establishments and by retort coke ovens combined—but not including the by-products of establishments outside these two industries—was in 1909, 166,627,013 thousand cubic feet, valued at \$141,224,520; in 1904, 116,432,779 thousand cubic feet, valued at \$113,347,032; and in 1899, 68,265,496 thousand cubic feet, valued at \$69,657,604. The increase in quantity for the period 1899–1909 was thus 144.1 per cent, and that in value 102.7 per cent. In addition to the product above reported for 1909, 1,730,563 thousand cubic feet were made and con-

NOTE.—The following products were made and consumed in establishments where produced:

	1900	1904
Acid phosphate.....tons..	1,838,865	884,211
Sulphuric acid.....tons..	841,935	692,904

sumed in gas plants and 60,799,543 thousand cubic feet were made and consumed or wasted by retort coking establishments. There is also a large consumption of producer gas and blast-furnace gas by establishments in other industries which produced the gas themselves.

The value of products of the illuminating-gas industry proper aggregated \$166,814,371 in 1909 as compared with \$75,716,693 in 1899, an increase of 120.3 per cent. Only about four-fifths of this value represents that of the gas itself. The industry shows a progressive decrease from census to census in unit values for all kinds of gas with the exception of acetylene gas. The *ton of 2,000 pounds* is used for showing quantities.

<sup>1</sup> Does not include \$4,013,885 paid for lamps and appliances.

<sup>2</sup> In addition, products of gas manufacture to the value of \$261,802 were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. The items covered by these products were 27,558 (thousands) cubic feet of coal gas, valued at \$29,419; 13,070 (thousands) cubic feet of acetylene gas, valued at \$224,618; 44,347 bushels of coke, valued at \$3,339; 38,370 gallons of tar, valued at \$1,372; and receipts from sale of lamps and appliances to the amount of \$2,994.

<sup>3</sup> Statistics of the gas made in coke establishments are shown in detail under the classification "Coke."

<sup>4</sup> Not reported separately.

<sup>5</sup> In addition, there were 13,813,058 gallons for which no value was reported.

<sup>6</sup> Includes 49,720,220 gallons of ammonia liquor, valued at \$725,702, and 1,154,319 pounds of hydrocarbons, valued at \$44,509.

**Glucose and starch.**—Statistics are presented in Table 72 for the glucose and starch industry for the years 1909 and 1904.

Corn is the principal material used. The value of all products of the industry was \$48,799,311 in 1909 and \$32,649,836 in 1904, the increase for the five-year period being 49.5 per cent. The starch product (gross, including duplication), increased in quantity 89.9 per cent and in value 60.3 per cent, the entire gain being in cornstarch. The percentages of increase in the value of glucose, grape sugar, and corn oil are large, notably that for corn oil. In 1899 the production of starch (in part estimated) was 543,040,000 pounds, greatly exceeding the figures for 1904. The decrease in production from 1899 to 1904 was due in

large measure to the decrease in the export trade of this commodity.

Some establishments included in the industry are engaged primarily in reprocessing starch, resulting in a duplication of products. In 1909 105,299,010 pounds of cornstarch were used as material by such factories, 104,597,648 pounds of cornstarch being obtained as products. The deduction of this duplication from the total gives the quantity of marketable cornstarch produced in 1909 as 534,227,718 pounds.

Primary products manufactured, whether for sale or for further use:			
Oil.....gallons.....	157,115,689	132,051,901	93,325,729
Meal and cake.....tons.....	1,661,734	1,343,977	884,391
Hulls.....tons.....	1,258,612	1,201,079	1,169,286
Linters.....pounds.....	174,620,099	116,707,298	57,272,053

<sup>1</sup> In addition, products to the value of \$2,017,305 were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. These establishments crushed 28,752 tons of seed and produced 1,212,852 gallons of crude oil, 12,811 tons of meal and cake, 8,926 tons of hulls, and 1,152,978 pounds of linters.

<sup>2</sup> In addition, establishments engaged primarily in the manufacture of products other than those covered by the industry designation crushed 36,440 tons of seed and produced 1,765,971 gallons of crude oil, 16,195 tons of meal and cake, 12,265 tons of hulls, and 1,085,671 pounds of linters.

The amount of seed crushed in mills engaged primarily in the industry increased from 2,479,386 tons in 1899 to 3,798,549 tons in 1909, or 53.2 per cent, while the value

of all products, including fertilizer, ice, feed, etc., where carried on in connection with the manufacture of cottonseed products, increased from \$58,726,632 to \$147,867,894, or 151.8 per cent. A marked feature of the industry is the progressive increase in quantity of oil, meal, and linters, and decrease in quantity of hulls per ton of seed crushed. The *ton of 2,000 pounds* is used for showing quantities.

**Oil, essential.**—The products of the essential-oil industry, given in the following table, increased in value from \$813,495 in 1899 to \$1,737,234 in 1909, or 113.6 per cent. The output of natural oils increased in value 58.2 per cent, and of witch-hazel over sevenfold.

<sup>1</sup> In addition, essential oils to the value of \$117,499 in 1909 and \$14,500 in 1904 were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Not reported separately.

<sup>3</sup> The products classified under this head include 49,327 pounds, valued at \$44,494; quantities not reported for the remainder.

**Paint and varnish.**—The inquiry at the present census in regard to specific materials used in the manufacture of paints and varnishes was confined to pig lead and alcohol, the comparative statistics for which, including establishments engaged primarily in the manufacture of products other than those covered by the industry designation, are as follows:

Table 75	MATERIAL.	1909	1904	1899
	<b>Pig lead:</b>			
	Tons (2,000 pounds).....	145,917	129,629	99,052

	Cost.....	\$226,724	\$138,703	\$175,907

The statistics for paint and varnish products are given in the following table, which does not include the pigments ground in establishments classified as engaged in the manufacture of kaolin and ground earths, the blacks made by establishments classified as engaged in the manufacture of bone, carbon, and lamp black, nor lead or zinc oxide made by lead and zinc smelters. During the period 1899 to 1909 the value of all products increased from \$69,562,235 to \$124,889,422, or 79.5 per cent. Paints in oil constitute

the most important group. The output of pigments, including white lead in oil, increased 141.9 per cent, and that of varnishes and japans 69 per cent in value.

	<b>All other products.....</b>	<b>\$12,281,481</b>	<b>\$12,333,585</b>	<b>\$5,274,944</b>

<sup>1</sup> In addition, paints and varnishes, to the value of \$2,583,397 in 1909 and \$1,221,338 in 1904, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Includes white lead in oil.

<sup>3</sup> Not reported separately.

<sup>4</sup> Not reported.

**NOTE.**—The following products were made and consumed in establishments where produced:

	1909	1904
White lead, dry.....	162,702,089 pounds.	122,288,484 pounds.
Lead oxides.....	4,526,425 pounds.	13,589,147 pounds.
Varnishes.....	4,407,312 gallons.	1,202,674 gallons.
Drying japans and dryers.....	3,060,756 gallons.	985,979 gallons.
Collodion and other cellulose nitrate solutions.....	20,600 gallons.	1,576,442 gallons.
Pyroxylin and other cellulose nitrates.....	24,750 pounds.	12,000 pounds.
Copperas.....	11,531,006 pounds.	

**Petroleum refining.**—The products of the petroleum-refining industry, statistics for which are presented in the following table, aggregated \$236,997,659 in value in 1909 as compared with \$123,929,384 in 1899, the increase during the decade being 91.2 per cent. This conforms closely to the increase in the cost of crude petroleum used, which was 89.4 per cent. The crude petroleum used increased in quantity from 52,011,005 barrels of 42 gallons in 1899 to 120,775,439 barrels in 1909, or 132.2 per cent, and the refined-oil products aggregated 40,290,985 barrels of 50 gallons in 1899, 46,454,062 barrels in 1904, and 89,082,810 barrels in 1909, an increase for the decade of 136.2 per cent.

<sup>1</sup> In 1909, 48,580 tons of sulphuric acid, and in 1904, 49,379 tons, were made and consumed in establishments where produced.

<sup>2</sup> Not reported separately.

<sup>3</sup> Not reported.

The largest gain was that in the output of fuel oils, which increased from 7,209,428 barrels in 1904 to 34,034,577 barrels in 1909, as the result of the increase in the refining of low-grade crude oils. The output

of lubricating oils and naphtha also increased very rapidly. The decrease in the value of "all other products" in 1909 as compared with 1904 is due in part to the fact that the products of the box, cooperage, tinware, and paint shops operated by the refineries were included in 1904, but when possible separate reports were obtained for these departments in 1909 and the statistics for them were included with those for other industries at this census.

**Salt.**—The statistics for the salt industry are given in the following table.<sup>1</sup> The value of all products increased from \$7,966,897 in 1899 to \$11,327,834 in 1909, or 42.2 per cent. The production of salt increased from 15,187,819 barrels in 1899 to 29,933,060 barrels in 1909, or 97.1 per cent, while the value of the product increased from \$5,869,362 to \$8,311,729, or 41.6 per cent, the average value per barrel decreasing from 39 cents in 1899 to 28 cents in 1909 on account of the greatly increased proportion of the lower grades of salt manufactured. The barrel of 280 pounds is used in showing quantities.

Table 78	PRODUCT.	1909	1904	1899

<sup>1</sup> In addition, 25,043 barrels of salt, to the value of \$8,415, were produced by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Includes potassium bromide.

<sup>3</sup> Not reported.

**Soap.**—The statistics for the soap industry given in Table 79 for 1909 and 1904 include those for the soap factories operated by the owners of slaughtering and meat-packing establishments as well as for establishments engaged primarily in the manufacture of soap. In 1899 the manufacture of soap and of candles was reported as one industry, the value of products being \$53,231,017. In 1904 the value of the combined products of these industries was \$72,164,062 and in 1909, \$114,488,298.

The cost of the materials used in the soap industry was \$72,179,418 in 1909 and \$43,625,608 in 1904, the

<sup>1</sup> The statistics differ from those published by the United States Geological Survey, which include Hawaii and Porto Rico.

increase for the five-year period being 65.5 per cent. The value of all products was \$111,357,777 in 1909 and \$68,274,700 in 1904, the increase for the five-year period being 63.1 per cent. With the addition of the by-products from establishments in other industries the total value of soap products was \$115,455,172 in 1909. The chief soap product was hard soap, which, including that made in establishments engaged primarily in the manufacture of products other than soap, aggregated 883,583 net tons in 1909. Glycerin is an important product of the soap industry. Reference should be made to Table 66 for the glycerin product of chemical establishments.

**Sulphuric, nitric, and mixed acids.**—Comparative statistics for the products of establishments engaged primarily in the manufacture of sulphuric, nitric, and mixed acids are given in the following table. The total value of products was \$9,884,057 in 1909, as compared with \$8,596,390 in 1899, an increase of 15 per cent. This increase was chiefly in sulphuric acid, the output of which increased in quantity (on the basis of 50° acid) 88.8 per cent and in value 38.3 per cent. The *ton of 2,000 pounds* is used in showing quantities.

Table 80	PRODUCT.	1909	1904	1899

Mixed—		
Pounds.....	11,820,542	22,518,433
Value.....	\$422,312	\$735,061
All other products.....	\$511,532	.....

<sup>2</sup> Includes the equivalent of 27,602 tons of oleum.

<sup>3</sup> Includes the equivalent of 13,268 tons of oleum.

NOTE.—In 1909, 1,271,535 tons of sulphuric acid (50°) and 110,760,619 pounds of nitric acid, and in 1904, 968,455 tons of sulphuric acid (50°) and 62,116,306 pounds of nitric acid were made and consumed in establishments where produced.

Including by-products from establishments engaged primarily in the manufacture of products other than those covered by the industry designation, the total production of these acids for sale in 1909 and 1904 was as follows:

Table 81	KIND.	1909	1904
	<b>Sulphuric acid (50°):</b>		
	Tons.....	1,476,992	900,991
	Value.....	\$10,084,759	\$7,942,211
	<b>Nitric acid:</b>		
	Pounds.....	27,325,946	46,264,081
	Value.....	\$1,357,098	\$2,250,944

For sale.....		1,476,992	900,992	783,768
For consumption.....		1,271,535	968,445	764,355

**Turpentine and rosin.**—The products of the turpentine and rosin industry for which statistics are presented in the following table increased in value from \$20,344,888 in 1899 to \$25,295,017 in 1909, or 24.3 per cent, but the gain was due wholly to the great increase in the price of rosin. The turpentine product decreased in both quantity and value during the decade. The output of rosin also decreased 24.9 per cent, but its value increased 145.2 per cent. The average value of rosin per barrel increased from \$1.18 in 1899 to \$3.85 in 1909.

Table 83	PRODUCT.	1909	1904	1899

<sup>1</sup> In addition, 682,702 gallons of turpentine, valued at \$243,491, was produced by wood distillation.

#### CLAY, GLASS, AND STONE PRODUCTS.

Under this general head are assembled the industries using clay, sand, and stone as basic materials, namely, the manufacture of brick, tile, pottery, terra-cotta, and fire-clay products, and that of cement, glass, and lime.

The statistics for all these industries, except glass manufacture, were collected in 1909 in cooperation with the United States Geological Survey, and the tables include, except as otherwise stated, the respective products made by establishments engaged primarily in the manufacture of other products as well as those establishments making such products as their principal business.

**Brick and tile, and pottery, terra-cotta, and fire-clay products.**—Table 84 summarizes the statistics in regard to the products of the brick and tile, pottery, and terra-cotta and fire-clay products industries. The total value of these classes of products was \$168,895,365 in 1909 and \$95,533,862 in 1899, the increase during the decade being 76.8 per cent. Of the total value of products in 1909, that of brick formed 57.5 per cent, that of tile and allied products 23.2 per cent, and that of pottery 18.4 per cent. The percentages were practically the same in 1904 and 1899. Some of the classes show large ratios of in-

<sup>1</sup> The statistics differ from those published by the United States Geological Survey, which include Porto Rico.

crease, notably porcelain electrical supplies and building terra cotta, including architectural terra cotta, fireproofing, and tiling.

<sup>1</sup> Not reported separately.

<sup>2</sup> Product of Ohio included in "other" pottery.

**Cement.**—The statistics of products for the cement industry for 1909 and 1904, given in the following table, show a total value of \$63,205,455 in 1909 as compared with \$29,873,122 in 1904, the rate of increase for the five-year period being 111.6 per cent. In 1899 the statistics for the lime and cement industries were combined, the products aggregating \$28,673,735 in value. The value of the combined lime and cement product in 1909 was \$81,157,442, the increase for the decade being 183 per cent.

During the period 1904–1909 the output of cement increased 110.5 per cent in quantity, all of the increase being in Portland cement, while the output of natural cement and of puzzolan cement decreased greatly. Portland cement formed 97.5 per cent of the total in 1909, as compared with 83.7 per cent in 1904.

**Glass.**—The following table presents comparative statistics for the glass industry, giving the total cost of materials and the total value of products, together with the quantities of the principal materials and products, for the years 1909, 1904, and 1899. There was an increase of 62.9 per cent in the value of all

products for 1909 as compared with 1899. The increase in the value of building glass amounted to 53.9 per cent; that in the value of pressed and blown glass to 60.4 per cent; and that in the value of bottles and jars to 66.2 per cent. The *ton of 2,000 pounds* is used in showing quantities.

\* In addition, 42,639 gross of bottles and jars, valued at \$90,490, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

† In addition, glassware to the value of \$9,663 was made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

‡ Not reported.

**Lime.**<sup>1</sup>—The total value of the lime reported as manufactured in 1909 was \$13,763,604 as compared with \$9,951,456 in 1904, an increase for the five-year period of 38.3 per cent. The quantity reported in 1909 was 3,467,523 tons (2,000 pounds), of which 1,904,202 tons was used for building or structural purposes; 591,792 tons for fertilizing; and the remainder in various manufacturing establishments, such as paper mills, tanneries, sugar factories, and alkali works. The value of all products reported by establishments engaged primarily in the manufacture of lime was \$17,951,987 in 1909 and \$14,751,170 in 1904.

#### VEHICLES FOR LAND TRANSPORTATION.

Under the above heading are given statistics for the manufacture of automobiles, bicycles, motorcycles, and carriages and wagons, and the construction of steam and electric railroad cars, and also for the operations of the construction and repair shops of railroads.

**Automobiles.**—The statistics for automobiles are presented in Table 87. Under "all other products" are included the products of establishments engaged

in the manufacture of automobile bodies and parts, which are sold largely to automobile manufacturers, as well as the value of bodies and parts made and sold separately by automobile manufacturers. The total value of products for the industry thus involves considerable duplication. The growth of the automobile industry has been phenomenal. In 1899 the general statistics for the industry were included with those for carriage and wagon manufacture, and only 3,897 automobiles were reported. In 1904 the total number, including automobiles made by concerns classified under other industries, was 22,830; while in 1909 the number was 127,287, or nearly thirty-three times the number reported in 1899.

The value of all products of the industry proper was \$249,202,075 in 1909 and \$30,033,536 in 1904. Gasoline machines formed 95.1 per cent of the total number made in 1909 and 86.2 per cent in 1904. Of the total number manufactured in 1909, 3,226, or 2.5 per cent, were rated at 50 horsepower or more; 51,218, or 40.5 per cent, at from 30 to 49 horsepower; 35,257, or 27.8 per cent, at from 20 to 29 horsepower; 29,353, or 23.2 per cent, at from 10 to 19 horsepower; and 7,539, or 6 per cent, at less than 10 horsepower. Passenger vehicles constituted 97.4 per cent of the total number and business vehicles 2.6 per cent.

<sup>1</sup> The statistics differ from those published by the United States Geological Survey, which include Hawaii and Porto Rico.

<sup>1</sup> In addition, 694 automobiles, valued at \$830,080, and bodies and parts valued at \$4,415,266, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> In addition, 1,138 automobiles, valued at \$379,205, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>3</sup> Not reported separately.

<sup>4</sup> None reported.

<sup>5</sup> Includes custom work and repairing by establishments manufacturing bodies and parts.

**Bicycles and motorcycles, and parts.**—The following table presents the comparative statistics of products for the bicycle and motorcycle industry. It does not include children's bicycles and tricycles. A marked feature is the decline in the manufacture of bicycles and tricycles and the increase in the manufacture of motorcycles.

Table 88	PRODUCT.	1909	1904	1899
	Total value.....	\$10,698,567	\$5,153,240	\$31,915,908
Bicycles:	Number.....	168,824	225,309	4,112,880
	Value.....	\$2,436,996	\$3,203,505	\$22,127,310
Tricycles:	Number.....	( <sup>c</sup> )	32	328
	Value.....		\$3,350	\$17,261
Motorcycles:	Number.....	18,628	2,300	160
	Value.....	\$3,015,988	\$354,980	\$33,674
All other products, including parts.....		\$5,245,583	\$1,591,405	\$9,737,663

<sup>1</sup> In addition, the following products were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation: In 1909, 64,883 bicycles, valued at \$791,193, and other products, including parts, etc., valued at \$579,927; in 1904, 25,178 bicycles, valued at \$537,418; 28 motorcycles, valued at \$4,200; and other products, including parts, valued at \$34,341; and in 1899, 69,811 bicycles, valued at \$1,529,177, and other products valued at \$24,000.

<sup>2</sup> None reported.

The total value of products of the industry decreased from \$31,915,908 in 1899 to \$5,153,240 in 1904, but by 1909 it had risen again to \$10,698,567, or more than double the figures for 1904.

**Carriages and wagons and materials.**—The following table presents statistics for the manufacture of carriages and wagons, including under "All other products" the products of establishments engaged in the manufacture of carriage and wagon materials, but not including children's carriages and sleds. The total value of products increased from \$138,261,763 in 1899 to \$159,892,547 in 1909, or 15.6 per cent. The value of wagons increased \$8,852,172, or 28.5 per cent, though the number manufactured was very little larger in 1909 than in 1899. The carriages reported were both fewer in number and lower in value in 1909 than in 1899. Public conveyances also show a decrease in value, but a slight increase in number. In each of these three classes the decreases that appear for the decade as a whole have taken place entirely since 1904, in which year the numbers and values reported exceeded those for 1899. The decreases are presumably due to the growth of the automobile industry.

Table 89	PRODUCT.	1909	1904	1899

<sup>1</sup> In addition, 14,908 carriages, valued at \$1,078,935; 42,112 wagons, valued at \$2,093,288; 104 public conveyances, valued at \$5,615; 8,209 sleighs and sleds, valued at \$165,917; and parts and materials, valued at \$1,184,256, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> In addition, carriages and wagons, valued at \$612,173, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>3</sup> Not reported separately.

<sup>4</sup> Automobiles manufactured in establishments devoted primarily to the manufacture of carriages and wagons.

**Cars and general shop construction and repairs by steam-railroad companies.**—Table 90 presents statistics of the work done by construction and repair shops operated by steam-railroad companies, not including roundhouses where running repairs are made. The total value of such work was \$405,600,727 in 1909 and \$218,238,277 in 1899, the rate of increase

for the decade being 85.9 per cent. Most of the value represents that of repairs, comparatively little representing new construction.

<sup>2</sup> None reported.

Cars and general shop construction and repairs by street-railroad companies.—The following table presents statistics of the operations of the construction and repair shops of street-railroad companies, including all electric systems and interurban electric lines—all railroads, in fact, except steam roads. The work done, which consists almost wholly of repairs, was not reported in detail in 1899, but its aggregate value in that year was \$9,370,811, as compared with \$13,437,121 in 1904 and \$31,962,561 in 1909, an increase for the decade of 241.1 per cent.

<sup>1</sup> Includes value of three electric locomotives.

Cars, steam-railroad.—The statistics of establishments constructing steam-railroad cars given in the

following table do not include the work of steam-railroad companies in their repair shops or that of concerns primarily engaged in the construction of street cars. The total value of products of this industry was \$123,729,627 in 1909, as compared with \$90,510,180 in 1899, an increase for the decade of 36.7 per cent. The freight cars made in 1909 were fewer in number and lower in aggregate value than those made in either 1904 or 1899, and the cars for passenger service made in 1909 were fewer in number and lower in aggregate value than those made in 1904. In fact, while there are a number of classes of products, such as passenger cars (day coaches) and ore cars, which show an increase in number and value for the five-year period 1904-1909, the increase in value for the total is more than covered by the increase in the value of "all other products."

<sup>1</sup> In addition, 8,977 cars, valued at \$5,924,871, and parts and repairs to the value of \$210,487, were reported by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> In addition, 2,541 cars, valued at \$1,012,820, and parts and repairs to the value of \$101,073, were reported by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

**Cars, street-railroad.**—The following table presenting comparative statistics of products for establishments constructing street or electric railroad cars does not include cars made in the shops of railroad companies or by concerns primarily engaged in making steam-railroad cars. In 1899 the value of all products was \$7,305,368 and in 1909 only \$7,809,866, a slight increase thus being shown for the decade. The value of products in 1904, however, exceeded that in 1909. The decrease in the construction of open cars since 1904 is especially marked.

Table 93	PRODUCT. <sup>1</sup>	1909	1904
Total value.....		\$7,809,866	\$10,844,196

Value.....		\$15,120,961	\$20,486,260	\$8,810,032
Freight service—				
Number.....		96,648	117,494	143,133
Value.....		\$79,753,326	\$79,860,652	\$77,240,632
Street-railroad cars: <sup>2</sup>				
Number.....		2,772	4,694	( <sup>3</sup> )
Value.....		\$7,263,109	\$9,902,310	( <sup>4</sup> )

<sup>1</sup> Including all service not passenger.

<sup>2</sup> Chiefly electric.

<sup>3</sup> Not reported separately; the total value of products of establishments engaged primarily in the construction of street-railroad cars amounted to \$7,305,368.

#### MISCELLANEOUS INDUSTRIES.

Statistics for all industries that can not properly be classified with any of the groups before presented, on account of the character either of the products or of the raw materials used, are given under the above head.

**Agricultural implements.**—Table 95 presents comparative statistics of the production of agricultural implements. The value of all products increased from \$101,207,428 in 1899 to \$146,329,268 in 1909, or 44.6

per cent. This includes the value of miscellaneous agricultural implements and parts not classifiable under either of the four groups shown separately and of a large number of products not distinctively agricultural, but made by manufacturers of agricultural implements, such as windmills, carriages and wagons, engines, presses, castings, lawn swings, etc. In 1909 the aggregate value of the four groups of agricultural implements—seeders and planters, implements of cultivation, harvesting implements, and separators—was \$94,524,494, compared with \$79,335,400 in 1904, an increase of 19.1 per cent.

Table 95	PRODUCT.	1909	1904	1899
Total value.....		\$146,329,268	\$112,007,844	\$101,207,428

<sup>1</sup> In addition, agricultural implements, to the value of \$2,989,276, in 1909, and to the value of \$1,349,679, in 1904, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Not reported separately.

**Electrical machinery, apparatus, and supplies.**—Table 96 summarizes the statistics of the output of electrical machinery, apparatus, and supplies, and

includes figures for such products made by establishments engaged primarily in the manufacture of other products, as well as for all products of establishments engaged primarily in the manufacture of electrical machinery, apparatus, and supplies. The value of all products was \$243,965,093 in 1909, as compared with \$105,831,865 in 1899, an increase for the decade of 130.5 per cent. Among the leading groups the highest rate of increase is for incandescent lamps, the value of which was \$3,515,118 in 1899 and \$15,714,809 in 1909.

All other products.....		\$39,691,708	\$28,978,444	\$17,448,098

<sup>1</sup> Includes values of electrical machinery, apparatus, and supplies made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation, as follows: 1909, \$22,656,530; 1904, \$18,742,033; and 1899, \$13,397,430.

<sup>2</sup> Not reported separately.

**Ice, manufactured.**—Table 97 includes the product of all establishments engaged primarily in manufacturing ice for sale, but does not include establishments making ice for their own use. Ice made for sale by establishments engaged chiefly in some other business, such as breweries, is reported in a footnote.

The value of all products of the industry proper increased from \$13,874,513 in 1899 to \$42,953,055 in 1909, or 209.6 per cent. The quantity of ice produced increased at about the same rate, and amounted to 12,647,949 tons in 1909.

<sup>1</sup> Includes 148,373 pounds of aqua ammonia, costing \$8,755.

<sup>2</sup> In addition, in 1909, 1,582,259 tons of ice, valued at \$4,249,790, and in 1904, 814,689 tons, valued at \$1,899,912, were produced by establishments engaged primarily in the manufacture of products other than ice.

<sup>3</sup> Includes, for purposes of comparison, products valued at \$93,535, not included in the general tables for this industry at census of 1900.

**Lumber and timber products.**—Beginning with 1906 an annual canvass of forest products has been made by the Bureau of the Census in cooperation with the Forest Service of the Department of Agriculture. The statistics for the year 1909 given in the following table are compiled from this annual report; those for 1904 and 1899 are from the regular census reports.

The totals for 1909 include statistics for some small neighborhood mills sawing chiefly or exclusively for local consumption, also a relatively small number of establishments using logs or bolts as material and engaged primarily in the manufacture of products other than those covered by the classified lumber and timber products industry, which classes are not represented in the totals for the other two years. Detailed statistics for the lumber and other forest-products industries will be found in the several annual reports published by the Bureau of the Census. The figures given in Table 98 can not be compared with those given in Table 110 because in the latter table the statistics cover not only the products of the sawmills, shingle and lath mills, but also the products of planing mills operated independently of sawmills, logging camps, veneer mills, and box factories.

<sup>1</sup> Includes 297,082 M feet of lumber, board measure, valued at \$5,191,569, reported as "other sawed products," and not by kinds of wood.

**Pianos and organs and materials.**—Table 99 includes the statistics for pianos and organs, and materials therefor, but does not include the products of establishments engaged primarily in the manufacture of other musical instruments. The value of all products increased from \$41,024,244 in 1899 to \$89,789,544 in 1909, or 118.9 per cent, the increase being almost

wholly in the value of pianos and player attachments for pianos. A marked feature is the gain in the number of pianos with player attachments manufactured, the output of which increased during the period 1904 to 1909 from 1,868 to 34,495, or seventeen fold. A large decrease occurred between 1904 and 1909 in the number of reed organs made.

All other products.....		\$3,086,911	\$3,832,961	\$8,196,258

<sup>1</sup> In addition, in 1909, parts and materials to the value of \$680,188; in 1904, 1,695 organs, valued at \$149,114; and in 1899, 259 pianos, valued at \$37,610; and 1,144 organs, valued at \$59,508, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>2</sup> Includes a few pianos with player attachments.

**Paper and wood pulp.**—Table 100 includes statistics for all establishments engaged in the manufacture of wood pulp and in the manufacture of paper, either separately or in conjunction. The total production of wood pulp in 1909 was 2,495,523 tons; in 1904, 1,921,768 tons; and in 1899, 1,179,535 tons. The percentage of increase for the decade was 111.6. Sulphite fiber shows the highest rate of increase, 144.6 per cent. An increasing proportion of the wood pulp is made by establishments which themselves consume it in making paper; in 1909, 63.5 per cent was so consumed by the establishments making it.

The value of all products, which includes some duplication, increased from \$127,326,162 in 1899 to \$267,656,964 in 1909, or 110.2 per cent. The output of paper products increased from 2,167,593 tons in 1899 to 4,216,708 tons in 1909, or 94.5 per cent, and their value from \$107,909,046 to \$232,741,049, or 115.7 per cent. Paper stock used for which quantities are reported aggregated 4,588,160 tons in 1909, of which wood pulp formed 61.6 per cent; old and waste paper, 21.4 per cent; rags, 7.8 per cent; straw, 6.6 per cent; and manila stock, 2.6 per cent. The ton of 2,000 pounds is used for showing quantities.

<sup>1</sup> In addition, paper and wood pulp to the value of \$2,567,267 was made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. <sup>2</sup> Not reported separately. <sup>3</sup> Not reported.

**Phonographs and graphophones.**—The following table gives comparative statistics for the manufacture of phonographs and graphophones. The value of all products increased from \$2,246,274 in 1899 to \$11,725,996 in 1909, or over fivefold, the bulk of the increase being in the first half of the decade. An important feature of the industry is the manufacture of records and blanks, the value of which formed 42.7 per cent of the total value of products in 1909, 45.7 per cent in 1904, and 24 per cent in 1899.

Table 101	PRODUCT.	1909	1904	1899
Total value.....		\$11,725,996	\$10,237,075	\$2,246,274

Records and blanks:				
Number.....	27,183,959	( <sup>2</sup> )	( <sup>2</sup> )	( <sup>2</sup> )
Value.....	\$5,007,104	\$4,678,547	\$539,370	
All other products.....		\$1,312,208	\$2,592,185	\$466,401

<sup>1</sup> In addition, records and parts to the value of \$31,889 were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation. <sup>2</sup> Not reported.

**Printing and publishing.**—The statistics for printing and publishing given in the following table include book and job printing and publishing; the printing and publishing of music; newspapers and periodicals; bookbinding and blank-book making; engraving, including plate printing; and lithographing.

Under the head of job printing is included the job printing done by newspaper, periodical, and other establishments, as well as that of regular job-printing establishments. The value of products reported for the bookbinding and blank-book industry includes the value of all products of concerns engaged primarily in these branches, as well as the value of bookbinding and blank books reported by printing and publishing establishments. In like manner there is included under electrotyping, engraving, and lithographing the value of all products of establishments engaged primarily in these branches.

The value of all products was \$737,876,087 in 1909,

\$552,473,353 in 1904, and \$395,186,629 in 1899, the rate of increase for the period 1899–1909 being 86.7 per cent. The income of newspapers and periodicals from subscriptions, sales, and advertising was \$337,596,288 in 1909, as compared with \$175,789,610 in 1899, the rate of increase for the decade being 92 per cent. Of the total income from these sources, that from advertising formed 60 per cent in 1909 and 54.5 per cent in 1899, having increased much faster than that from subscriptions and sales.

Newspapers and periodicals increased in number from 18,793 in 1899 to 22,141 in 1909, or 17.8 per cent, and their aggregate circulation increased 53.9 per cent. The average circulation per issue was 7,428 in 1909, as compared with 6,866 in 1904 and 5,688 in 1899. The greatest relative increases in circulation during the decade were reported for dailies and monthlies. In the circulation of the latter, however, there was a decrease between 1904 and 1909.

Shipbuilding, including boat building.—The following table shows the value of work done on the different classes of water craft during the several census years, not including that done in Government establishments, and also the value of repair work and all other products of the shipbuilding industry. The total value of products was lower in 1909 than in 1904 or 1899.

Table 104 PRODUCT. <sup>1</sup>	1909	1904	1899
Total value.....	\$ 373,360,315	\$ 583,769,239	\$ 74,532,277
Work done during the year on vessels and boats.....	42,310,925	56,121,227	37,719,308
Vessels of 5 gross tons and over.....	37,718,018	53,119,935	35,760,473
Boats of less than 5 gross tons.....	4,592,907	3,001,292	1,958,835
Steam.....	20,800		
Motor, gasoline, electric, and other.....	3,155,375	1,879,288	1,059,365
Sailboats, rowboats, canoes, scows, etc.....	1,416,732	1,122,004	909,470
Repair work.....	26,678,643	22,829,040	23,134,436
All other products.....	4,370,747	3,818,972	13,678,533

<sup>1</sup> Not including work done in Government shipyards, valued in 1909 at \$25,872,033; in 1904, at \$17,265,469; and in 1899, at \$11,022,312.

<sup>2</sup> In addition, the following items were reported by establishments engaged primarily in the manufacture of products other than those covered by the industry designation: Work done on vessels of 5 tons and over, launched, \$413,905; vessels building but not launched, \$30,184; boats of under 5 tons, \$145,155; and other boat products and repairs, \$182,462; or a total of \$776,706.

<sup>3</sup> In addition, the following items were reported by establishments engaged primarily in the manufacture of products other than those covered by the industry designation: Work done on vessels of 5 tons and over, launched, \$463,018; boats of under 5 tons, \$147,542; and other boat products and repairs, \$46,782; or a total of \$657,342.

The value of the products of governmental shipyards in 1909 was \$25,872,033; in 1904, \$17,265,469; and in 1899, \$11,022,312. Thus the total value of products reported for all establishments, governmental and private, was \$99,232,348 in 1909, \$100,034,708 in 1904, and \$85,554,589 in 1899. The increase of \$13,677,759, or 16 per cent, shown for the period 1899–1909, was due entirely to work of governmental establishments.

The following table shows the number of vessels of each class launched during the census years 1909, 1904, and 1899. These figures are not strictly comparable with those giving values presented in the preceding table, since the former cover all work done during the year, both on vessels launched during the year and on those not yet launched at its close. The number of vessels of nearly every class was less in 1909 than at the two preceding censuses, but the number of boats increased greatly, the number made by all establishments aggregating 8,577, of which number 97.3 per cent were gasoline motor boats.

<sup>1</sup> Not including vessels launched in Government shipyards as follows: In 1909, 3 steel and 23 wooden vessels, the steel vessels having a total of 350 gross tons and the wooden a total of 1,709 gross tons, and in 1904, 17 steel and 14 wooden vessels, the steel vessels having a total of 23,850 gross tons and the wooden a total of 3,402 gross tons.

<sup>2</sup> In addition, there were built by establishments engaged primarily in the manufacture of products other than those covered by the industry designation, 8 steel and 14 wooden vessels, the steel vessels having a total of 5,429 gross tons and the wooden a total of 7,106 gross tons.

<sup>3</sup> In addition, there were built by establishments engaged primarily in the manufacture of products other than those covered by the industry designation, 3 steel and 131 wooden vessels, the steel vessels having a total of 408 gross tons and the wooden a total of 21,919 gross tons.

<sup>4</sup> Not including 53 boats built in Government shipyards in 1909 and 52 in 1904.

<sup>5</sup> In addition, 412 boats were built by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>6</sup> In addition, 365 boats were built by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

<sup>7</sup> Not reported separately.

**Laundries.**—Steam laundries are not generally considered as manufacturing establishments, and therefore statistics for them have been excluded from prior censuses. Since the industry has, however, developed so rapidly, large amounts of capital now being invested, and many wage earners being employed, it should no longer be omitted from the industrial census. The establishments are conducted according to factory methods, and therefore the statistics are associated with those for the manufacturing industries of the Thirteenth Census. They are not included, however, in the general tables or in the totals for manufacturing industries.

During the year 1909 there were in the United States 5,186 laundries operated by the use of mechanical power. The capital reported by these establishments as invested in the industry amounted to \$68,935,000. In addition, such establishments rent a great deal of property, the annual rental paid by laundries for plant and equipment amounting in 1909 to \$2,277,000. The value of the work done was \$104,680,086.

In addition to ascertaining the average number of wage earners employed during the entire year, the census calls for the actual number of wage earners, by sex and age periods, employed on December 15, 1909, or the nearest representative day. On that date there were employed 112,064 wage earners, of whom 31,947, or 28.5 per cent, were men; 79,152, or 70.6 per cent, women; and 965, or 0.9 per cent, children under 16 years of age.

The following statement summarizes the statistics:

Number of establishments.....	5,186
Capital invested.....	\$68,935,000
Cost of materials used.....	\$17,696,000
Salaries and wages, total.....	\$53,007,747
Salaries.....	\$8,180,769
Wages.....	\$44,826,978
Miscellaneous expenses.....	\$14,483,497
Value of products or amount received for work done..	\$104,680,086

**Employees:**

Number of salaried officials and clerks.....	9,170
Average number of wage earners employed during the year.....	109,484
Actual number of wage earners employed on Dec. 15, 1909, or nearest representative day..	112,064
Men 16 years and over.....	31,947
Women 16 years and over.....	79,152
Children under 16 years—	
Male.....	274
Female.....	691
Primary power used, horsepower.....	123,477

The number of wage earners employed each month and the per cent which this number represented of the greatest number employed in laundries in any month were as follows:

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	103,746	90.6	July.....	114,211	99.7
February.....	103,937	90.7	August.....	114,539	100.0
March.....	104,970	91.6	September.....	113,738	99.3
April.....	106,422	92.9	October.....	111,500	97.3
May.....	108,149	94.4	November.....	110,479	96.5
June.....	111,313	97.2	December.....	110,805	96.7

The different kinds of primary power, the number of engines, and the horsepower used in laundries during 1909 are shown in the following tabular statement:

KIND.	Number of engines or motors.	Horse-power.
Primary power, total.....		123,477
Owned.....	4,527	109,870
Steam.....	4,119	105,272
Gas.....	379	4,073
Water wheels.....	18	456
Water motors.....	11	69
Rented.....		13,607
Electric.....	2,401	11,157
Other.....		2,450

The kind and amount of fuel used in laundries are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal.....	Tons (2,240 lbs.)..	178,640
Bituminous coal.....	Tons (2,000 lbs.)..	886,734
Coke.....	Tons (2,000 lbs.)..	14,785
Wood.....	Cords.....	94,723
Oil.....	Barrels.....	372,586
Gas.....	1,000 feet.....	2,729,324

**Small custom sawmills and gristmills.**—Statistics for small custom sawmills and gristmills are not included in the general tables or in the totals for manufacturing industries, but are presented in the following summary. The cost of materials and value of products for gristmills include an estimate of the grain ground, but it was impossible to estimate the value of the lumber sawed in the custom sawmills.

	Small custom sawmills.	Small custom gristmills.
Number of establishments.....	4,133	11,961
Persons engaged in industry.....	12,836	22,596
Proprietors and firm members.....	5,702	15,435
Salaried employees.....	44	147
Wage earners (average number).....	7,090	7,014
Primary horsepower.....	93,280	272,763
Capital.....	\$5,655,145	\$21,258,510
Expenses.....	2,160,271	48,110,565
Services.....	1,696,152	1,186,540
Materials.....	97,574	146,314,868
Miscellaneous.....	366,545	609,157
Value of products.....	4,515,881	255,115,553

<sup>1</sup> Includes estimated value of all grain ground.

<sup>2</sup> Includes estimate of value of products from all grain ground. In addition, custom ground products, valued at \$1,170,751, were made by establishments engaged primarily in the manufacture of products other than those covered by the industry designation.

## COMPARATIVE SUMMARY FOR THE UNITED STATES, BY SPECIFIED INDUSTRIES: 1909, 1904, AND 1899.

NOTES.—The figures for some industries do not represent the total production, because important establishments that manufacture the same class of products may be included in other industries. (See Introduction.)

Primary horsepower includes power generated in manufacturing establishments plus electric and other power rented from outside sources; it does not include electric power generated by primary units of the establishments reporting.

In the statistics of power for 1899 there is a difference of 154,723 horsepower between the total and the sum of the figures for the various industries. This is due to the impossibility of making correct revision of the figures for each industry for comparison with 1904 and 1909.

[A minus sign (—) denotes decrease.]

<sup>1</sup> Included in "lime and cement" in 1899.<sup>2</sup> Included in "chemicals" in 1899.<sup>3</sup> All other industries embrace "Millstones," 1 establishment; "ordnance and accessories," 2; "pulp, from fiber other than wood," 2; "straw goods, not elsewhere specified," 2; and "whalebone cutting," 1, in 1909. "Millstones," 2; "ordnance and accessories," 4; "pulp, from fiber other than wood," 1; "straw goods, not elsewhere specified," 6; "whalebone cutting," 2, in 1904. "Millstones," 3; "ordnance and accessories," 4; "pulp, from fiber other than wood," 3; "straw goods, not elsewhere specified," 4; "whalebone cutting," 3, in 1899.

## 525

NOTE.—Primary horsepower includes power generated in manufacturing establishments plus electric and other power rented from outside sources; it does not include electric power generated by primary units of the establishments reporting.

[A minus sign (—) denotes decrease.]

### DIVISION AND STATE.

Table 111			PERSONS ENGAGED IN INDUSTRY.					Primary horse-power.	Capital.	Salaries.	Wages.	Cost of materials.	Value of products.	Value added by manufacture (value of products less cost of materials).	PER CENT OF INCREASE.	
DIVISION AND STATE.	Census.	Number of establishments.	Total.	Proprietors and firm members.	Salaried employees.	Wage earners (average number).	Expressed in thousands.								Wage earners (average number).	Value of products.

<sup>1</sup> Includes Indian Territory.

## COMPARATIVE SUMMARY FOR THE 25 PRINCIPAL CITIES: 1909, 1904, AND 1899.

NOTE.—The figures for some cities do not agree with those published in 1904 because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the cities.

[A minus sign (—) denotes decrease.]

Table 112.																
CITY.	Cen- sus.	Number of estab- lish- ments.	PERSONS ENGAGED IN INDUSTRY.					Primary horse- power.	Capital.	Sala- ries.	Wages.	Cost of materials.	Value of products.	Value added by man- ufacture (value of products less cost of ma- terials).	PER CENT OF INCREASE.	
			Total.	Pro- pri- etors and firm mem- bers.	Salaried em- ployees.	Wage earners (average number).	Wage earners (aver- age num- ber).								Value of prod- ucts.	
																Expressed in thousands.

## CITIES OF 10,000 INHABITANTS OR OVER—NUMBER OF ESTABLISHMENTS, AVERAGE NUMBER OF WAGE EARNERS, VALUE OF PRODUCTS, AND VALUE ADDED BY MANUFACTURE: 1909, 1904, AND 1899.

NOTE.—The figures for some cities do not agree with those published in 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the cities. Figures for 1904 and 1899 are available for cities which had between 8,000 and 10,000 inhabitants in 1900 and are included, but for cities having less than 8,000 inhabitants in 1900 comparative data are not available.

Table 113.

CITY.	NUMBER OF ESTABLISHMENTS.			AVERAGE NUMBER OF WAGE EARNERS.			VALUE OF PRODUCTS.			VALUE ADDED BY MANUFACTURE (VALUE OF PRODUCTS LESS COST OF MATERIALS).

# MINES AND QUARRIES

CHAPTER 16.—STATISTICS OF MINES AND QUARRIES FOR INDUSTRIES AND STATES.

## CHAPTER 16.

### STATISTICS OF MINES AND QUARRIES FOR INDUSTRIES AND STATES.

**Introduction.**—This chapter contains a summary of the statistics of mining for the United States for the calendar year 1909, as shown by the Thirteenth Census.

The statistics relate both to mines in the narrower sense and to quarries and petroleum and gas wells, but for brevity all these enterprises are often called "mines," using the term in its broad sense.

The principal statistics of mining industries derived from the census inquiry are given in a series of general tables at the end of the chapter. Table 25 gives a comparative summary of the results of the inquiries of 1909 and 1902, comparing for each geographic division and state the expenses of operation and development, the primary power, and the value of products. Table 26 gives a similar comparative summary for each industry. Table 27 gives for the several geographic divisions and for each state the number of operators; the number of mines, quarries, or wells; capital; expenses of operation and development; number of persons engaged in the industry; acreage of land controlled; primary power; and value of products. Table 28 gives similar information for each industry. Table 29 gives information similar to that contained in Table 28 for nonproducing mines, quarries, and wells, in which operations are as yet confined to development work.

The explanatory text deals almost exclusively with the producing mines, quarries, and wells, and gives for all mining industries combined and for a number of the more important industries separately further statistics amplifying the figures given in the general tables, together with averages, percentages, etc., derived from the figures in those tables.

In order to avoid any misapprehension as to the significance of the statistics here published, it seems advisable to offer a few brief explanations of the terms used in the census of mining industries.

**Scope of census.**—The Thirteenth Census covered all classes of mines and quarries that were in operation during any portion of the year 1909, both those which were producing and those whose operations were confined to development work, and petroleum and gas wells that were in operation at the end of that year. Mines, quarries, or wells that were idle during the entire year 1909 were omitted from the canvass. The following operations were likewise omitted from the canvass: Prospecting; the digging or dredging of sand and gravel for the construction of roads and for building operations; the production of mineral waters; and the operation of small bituminous coal banks producing less than 1,000 tons annually. Where the mineral products are not marketed in their

crude condition, but are dressed or washed at the mine or quarry, the statistics of mining cover the entire work of obtaining the crude material and its preparation for the market.

**Period covered.**—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for enterprises which began or discontinued business during the year.

**Number of operators.**—As a rule, the unit of enumeration was the "operator." Every individual, firm, or corporation was required to furnish one report for all mines, quarries, or wells which were operated under the same management, or for which one set of books of account was kept. Where several mines, quarries, or wells managed separately were owned by the same operator, it was optional with the operator to furnish one report for all his operations, or a separate report for each of his properties. Separate reports were obtained for all properties operated in different states, even where they were owned by the same operator. Likewise, where the operations of one individual, firm, or corporation covered more than one class of mines and quarries, such as coal, iron, limestone, etc., a separate report was received for each industry. The total number of operators, accordingly, as shown by the original returns, included a small amount of duplication. As far as practicable, all duplications of this character within the same industry were eliminated by the consolidation of the reports for the same operator. All such duplications have been eliminated for the coal, petroleum and natural gas, iron, and copper industries.

**Number of mines, quarries, and wells.**—This figure represents the total number of mines and quarries in operation or in the course of development at any time during the calendar year 1909, or the business year that corresponds most nearly to that calendar year, and the number of completed petroleum and natural gas wells in operation on December 31, 1909.

In most mining and quarrying industries the number of mines or quarries varies but little from the number of operators, the principal variations being found in the mining of anthracite coal, iron, and copper, with an average of more than two mines per operator; in the mining of tungsten, with an average of more than five mines per operator; and in the quarrying of gypsum, with an average of nearly three quarries per operator. In the production of petroleum and natural gas there was an average of more than twenty wells to one operator.

**Expenses of operation and development.**—A certain amount of development work is incident to the operation of every mine. The expenses reported for producing mines include the cost both of operation and of development work which was done in connection with operation.

**Wages.**—The amount shown as wages includes only the compensation of regular wage earners hired by the day, week, or month, or under the piecework system. There is a class of miners variously known under the local names of "leasers," "block lessees," etc., who are compensated by a share of the product. The compensation of such miners is included under the payments for "Contract work" in the general tables.

**Supplies and materials.**—This item includes the cost of lumber and timber used for repairs, mine supports, track ties, etc.; iron and steel for blacksmithing; rails, frogs, sleepers, etc., for tracks;

renewals of tools and machinery and materials for repairs; and supplies, explosives, oil, etc., as well as the cost of fuel and the rent of power. The schedule called only for the cost of such supplies and materials as had been used during the year covered by the report. Accurate figures, however, could be furnished only in those cases where the operators kept an account of supplies and materials used, or had an inventory made of all in stock at the beginning and at the end of the year. Such a system of accounting is far from general among mine operators, and there is reason to believe that in many cases the reported cost of supplies and materials covered all purchased during the year rather than those used during the year. The crude product of some operators was purchased by others for further dressing or refining; the cost of such materials is shown in a separate column in the general tables for producing mines, but in all other tables it is included in the general item of cost of supplies and materials.

**Miscellaneous expenses.**—In the general tables royalties and the rent of mines, taxes, and the amounts paid for contract work are shown in separate columns. All other expenses not enumerated separately are combined under the head of "Rent of offices and other sundry expenses," which includes rent of offices and buildings other than those at the mine, quarry, or well, use of patents, insurance, ordinary repairs of buildings and machinery (not including materials therefor where carried in separate accounts), advertising, damages, traveling expenses, and all other sundry expenses.

**Value of products.**—Statistics of the value of each mineral product were obtained by the Bureau of the Census in cooperation with the United States Geological Survey, but the two bureaus follow different methods in presenting these statistics. The Geological Survey shows separately the value of each mineral product, whereas the Bureau of the Census presents the value of products of each mining industry. The value of products given for each mining industry often includes the value of some products not covered by the industry designation. The crude product of metaliferous mines may include varying combinations of metals, such as gold, silver, copper, lead, zinc, and iron. Similarly, the total value of all products of the granite quarries is not identical with the value of the total output of granite, but may include the value of some marble or other stone quarried in connection with the principal product.

The value of products for 1909 in most cases represents the value of the products marketed during that year, not the value of those mined during that year. In this respect the data differ from those usually obtained for manufacturing establishments. In order to ascertain the value of the products mined during the year 1909, account would have had to be taken of the inventories at the beginning and at the close of the year. In many mining industries, however, no such inventories are made, by reason of the purely speculative value of the crude product lying on the dump.

Another element of inaccuracy inherent in the statistics as to the value of products is due to the combination of mining with manufacturing. Most of the product of iron mines is not sold, but is used in blast furnaces operated by the owners of the mines. A large proportion of the output of coal is likewise used in iron and steel works operated by the owners of the coal mines, while a considerable proportion also is controlled by railway companies and other industrial concerns which own the coal mines, either directly, or indirectly through subsidiary companies. In such cases the reported value of

the mining product is often a mere item of bookkeeping which may or may not reflect the actual market value of the product.

The total value of products for some industries includes a certain amount of duplication, due to the fact that the crude product of some operators was used as material by others whose mines or quarries were equipped with dressing or refining plants; the total value of products for the industry, accordingly, includes both the crude product and the refined product made from it. In order to eliminate this duplication and to obtain the approximate value of products for each industry, the cost of such materials, which is shown in a separate column in the general tables for producing mines, should be subtracted from the total value of products for the industry. There is, however, a certain degree of inaccuracy involved in such a computation, because the purchaser of the crude product usually figures freight as a part of the cost of his materials, whereas the value reported by the producer represents the selling value at the mine.

**Cost of production and profits.**—It can be seen from the preceding explanations that the difference between the reported value of products and the total expenses reported does not accurately represent profits. As already stated the product reported usually represents that sold rather than the actual output in producing which the expenses were incurred. Furthermore, the census inquiries did not call for depreciation, which is a particularly important element in mining because of the exhaustion of the mine. Few mining concerns keep a separate account for depreciation. Moreover, the heterogeneous character of the returns regarding capital precludes the computation, from census statistics, of the rate of return on the investment.

**Capital.**—The census schedule required every operator to state the total amount of capital invested in the enterprise on the last day of the business year reported, as shown by his books. There is, however, a great diversity in the methods of bookkeeping in use by different operators. As a result, the statistics for capital lack uniformity. Some of the reported figures apparently represent capital stock at face value; others include large investments in mineral lands which are not at present being actively mined, but are held in reserve; still others may include expenditures for unproductive mining ventures in no way related to the operations carried on during the census year.

**Persons engaged in mining industries.**—The statistics of the number of proprietors and officials, clerks, and wage earners, are based on the returns for December 15, or the nearest representative day. The reported number of wage earners includes overseers and foremen performing work similar to that of the men over whom they have charge; those whose duties are wholly supervisory are classed as superintendents and managers. Because of the very common practice of shutting down mines at frequent intervals, it is impossible to ascertain with any satisfactory degree of accuracy the average number of employees—that is, the number who, if continuously employed, would be required to produce the actual output of the year.

**Primary horsepower.**—This item represents the total primary power generated by the mining enterprises plus the amount of power, principally electric, rented by them from other concerns. It does not cover the horsepower of electric motors operated by current generated by the enterprises themselves, the inclusion of which would evidently result in duplication.

## GENERAL SUMMARY.

**Continental United States and noncontiguous territory: 1909.**—Table 1 gives for 1909 the principal statistics collected by the Bureau of the Census for all mines and quarries and petroleum and gas wells within the area of enumeration. In addition to

continental United States this area included in 1909 Alaska, Hawaii, and Porto Rico. The figures here given include nonproducing as well as producing mines and constitute the most general summary of the results of the investigation.

Table 1	NUMBER OR AMOUNT: 1909

Salaries.....	56,286,988	55,878,478	408,510		
Wages.....	606,135,238	599,705,989	6,411,340	14,058	3,851
Supplies and materials.....	263,019,615	260,110,898	2,902,956	5,371	390
Royalties and rent of mines.....	65,683,384	64,154,926	1,527,995	206	257
Contract work.....	32,335,580	30,690,458	1,645,063		59
Miscellaneous.....	63,976,276	63,650,680	324,336	125	1,135
Value of products.....	1,255,370,163	1,238,410,322	16,933,427	20,955	5,459

Of the total number of persons engaged in mining industries in the area covered by the preceding table, only a little more than one-half of 1 per cent were in Alaska, while the mining operations in Hawaii and Porto Rico were insignificant.

Owing to the fact that a certain number of mines in continental United States and Alaska were engaged in development work only, during the census year, the figure for value of products in 1909, \$1,255,370,163, relates to a smaller number of enterprises than the figures for persons engaged in the industries, expenses, etc. Of the total, representing the value of the products of all mines in the entire area covered by the canvass, Alaska contributed \$16,933,427, or 1.3 per cent, while Hawaii contributed only \$20,955 and Porto Rico \$5,459. A rough but somewhat convenient measure of the relative importance of mining operations in the areas concerned is found in the per capita production (that is, value of products divided by total population), which was \$13.46 for continental United States, \$263.12 for Alaska, \$0.11 for Hawaii, and less than 1 cent for Porto Rico.

The further discussion of mining operations in this chapter is confined to the data reported for continental United States (referred to simply as the United States).

**Producing and nonproducing mines.**—In some aspects of the statistics of mining industries the distinction between producing and nonproducing mines is

important. So far as it is possible to bring the figures in regard to production into relation with the various factors of operation, particularly the number of employees and the expenses of operation, it is necessary to confine comparisons to the producing mines. Table 2 gives comparative figures for producing and nonproducing mines in the United States.

Table 2	All enterprises.	Producing enterprises.	NONPRODUCING ENTERPRISES.	
			Number or amount.	Per cent of total.

Value of products.....	1,238,410,322	1,238,410,322		

<sup>1</sup> Less than one-tenth of 1 per cent.

Perhaps the most satisfactory index of the relative importance of the two classes of mines shown in the preceding table is the number of wage earners and the amount of primary power, the figures for nonproducing mines representing exactly 2 per cent of the total in each instance. The average number of wage earners per operator for the nonproducing mines is 6 and for the producing mines 53.

Additional details in regard to nonproducing mines are given in Table 29 (p. 564), which presents separate figures for most of the different mining industries. The further discussion in this chapter of the statistics for 1909 will deal primarily with the producing mines,

with only incidental reference to the nonproducing enterprises.

There were in all mining industries in the United States in 1909, as shown by the previous table, 19,915 operators of producing mines, who employed 1,065,283 wage earners and reported products valued at \$1,238,410,322.

**Geographic distribution of producing enterprises.**—The distribution of the mining industries by geographic divisions and states is shown in Table 3, which gives the number of wage earners employed and the value of products for each division and state, with the percentage which such number or value forms of the total.

<sup>1</sup> Less than one-tenth of 1 per cent.

Whether the importance of the mining industry be measured by the value of its products or by the number of wage earners employed, the Middle Atlantic division easily ranks first among the several geographic divisions, the value of its mineral products in 1909 amounting to \$371,000,000, or 30 per cent of the total for the United States. Next in order was the East North Central division, with products valued at \$238,000,000, or about one-fifth of the total. The mineral products of these two divisions consist largely of coal. Other divisions with a considerable mineral production are the Mountain, West North Central, and South Atlantic.

The prominence of the Middle Atlantic division in mineral production is due almost wholly to the state of Pennsylvania, which, with products (mainly coal) valued at nearly \$350,000,000 in 1909, reported more than one-fourth of the value of all mineral products in

<sup>2</sup> No mineral production in District of Columbia or Mississippi.

the United States. No other state approaches it in importance. Illinois and West Virginia, which rank next in importance, each had products valued at a little more than \$76,000,000, or less than one-fourth the value shown for Pennsylvania. Other states where the value of mineral products exceeded \$50,000,000 are Michigan, Ohio, California, Minnesota, and Montana. The eight states named reported in 1909, 65.4 per cent of the value of all mineral products for the United States.

There are several states in which the mineral production is quite insignificant. In the District of Columbia and Mississippi no mineral production was reported. Rhode Island, North Dakota, Nebraska, and Delaware each contributed less than one-tenth of 1 per cent of the whole value of mineral products, while the contribution of Maine, New Hampshire, Massachusetts, Connecticut, North Carolina, South

## VALUE OF PRODUCTS, MINING INDUSTRIES: 1909.

## VALUE OF PRODUCTS, MINING INDUSTRIES, BY STATES: 1902 AND 1909.

(Based on Table 25.)

Carolina, Georgia, Arkansas, New Mexico, and Oregon was less than one-half of 1 per cent in each case.

The distribution of the wage earners employed in producing mines among the divisions and states follows approximately the distribution of the total value of products. Where coal is the chief mineral product, however, the number of wage earners is relatively greater than elsewhere. The Middle Atlantic division reported a considerably greater percentage of all wage earners in the producing mines of the country than of the total value of mineral products. In less marked degree the same statement holds true of the East South Central, South Atlantic, East North Central, and New England divisions, while each of the remaining divisions reported a larger percentage of the total value of products than of the total number of wage earners. Pennsylvania employed 36.1 per cent of all the wage earners, Illinois 7.7 per cent, and West Virginia 7.4 per cent, these three leading coal states together reporting more than one-half of all the wage earners employed in mining industries.

**Principal mining industries.**—Table 4 shows the relative importance of the principal mining industries in 1909.

<sup>1</sup> Less than one-tenth of 1 per cent.

The foregoing table presents statistics for 9 industries which in 1909 had products exceeding \$10,000,000 in value. These 9 industries employed 95.2 per cent of all the wage earners engaged in producing enterprises and contributed 96 per cent of the total value of the products of mining industries. Statistics are also given in the table for 8 other mining industries having products between \$1,500,000 and \$10,000,000 in value. The 17 industries shown separately in the table employed over 99 per cent of the wage earners

engaged in productive enterprises and contributed more than 99 per cent of the total value of products of mining industries.

Coal mining far outranks any other industry in importance. In 1909 it furnished occupation to more than two-thirds of all the wage earners employed by producing mines, quarries, and wells, and contributed only a little less than one-half of the total value of products reported. Of the total value of coal produced, the anthracite mines furnished approximately one-fourth and the bituminous mines three-fourths. Another fuel industry—the production of petroleum and natural gas—ranks second in importance in value of products, but employs comparatively few wage earners.

Of the metals, copper and iron outrank the precious metals both in the value of the product mined and in the number of wage earners, but lead and zinc fall considerably below the precious metals in both respects.

**General comparison for the United States: 1902–1909.**—Table 5 on the next page gives statistics regarding expenses, value of products, and mechanical power for producing mines, quarries, and petroleum and gas wells in the United States for 1909 and 1902, together with the percentages of increase.

The figures in this table for 1909 vary slightly from those shown in preceding tables by reason of the differences between the present census and that of 1902 in the classification of mining industries. There are many industries on the border line between mining and manufacturing. Certain mechanical and chemical processes required for the preparation of the mineral for the market after its extraction from the ground may be performed either at the mine or at the factory where the mineral is used as material. The practices in this respect vary from industry to industry and from period to period.

At the Thirteenth Census the production of cement was classified as a manufacturing industry. The burning of lime was likewise classified as a manufacturing industry, and where the lime was burned at the limestone quarry the quarrying was regarded as a subordinate part of the manufacturing operations. At the special census of mines and quarries in 1902, however, the cement industry was included, and the burning of lime was treated as a part of the operations of the limestone quarries. In order to make the statistics for the two censuses comparable, the figures given in Table 5 include for 1909 those for the burning of lime, elsewhere treated as a manufacturing industry, and exclude for 1902 those relating to the production of cement.

On the other hand, the special census of 1902 did not include the conversion of coal into coke at the coal mines. In the Thirteenth Census reports the coke industry is treated both in the report on manufactures and in that on mines. Where coal was turned into coke at the mines, estimates were obtained for the coke-manufacturing operations and included in the statistics of manufactures. At the same time, since the

mining of the coal and its conversion at the mines into coke form, in fact, integral parts of one industrial operation, the complete report for both processes is included in the statistics for bituminous coal mines. In order, however, to make the statistics for 1909 comparable with those for 1902, all statistics relating to coke have been eliminated from the table which follows.

By reason of these adjustments the figures here printed do not correspond either to those given in the report for 1902 or to those printed elsewhere for 1909.

Table 5	NUMBER OR AMOUNT.		Per cent of increase.
	1909	1902	
Expenses of operation and development:			
Services.....	\$625,610,068	\$401,225,547	55.9
Supplies and materials.....	208,771,046	114,515,832	82.3
Royalties and rent of mines.....	62,456,760	34,476,227	81.2
Contract work.....	24,091,886	20,638,127	16.7
Value of products.....	1,175,475,001	771,486,926	52.4
Primary horsepower.....	4,556,170	2,663,964	71.0

The item "taxes, rent of offices, and other sundry expenses," which is included with the expenses of operation and development in the tables giving statistics for 1909 only, is not shown in this table for the reason that at the special census of mines and quarries in 1902 the corresponding item of expenses included interest, which was excluded at the Thirteenth Census. In 1902 the item of interest on bonds amounted to more than \$13,000,000. The amount of interest paid on other loans was not reported separately. The aggregate expenses shown in the preceding table represent 96.3 per cent of the total expenses reported for 1902 exclusive of interest on bonds, while the aggregate for 1909 represents 90.6 per cent of the total expenses for that year.

In 1902 the products of mining industries were valued at \$771,486,926, but in 1909 the value was reported as \$1,175,475,001, an increase of 52.4 per cent in the seven years.

### VALUE OF PRODUCTS, MINING INDUSTRIES: 1902 AND 1909.

(Based on Table 26.)

MILLIONS OF DOLLARS

PERCENTAGE DISTRIBUTION, BY INDUSTRIES.

(Based on Table 4.)

Table 26, page 559, gives comparative statistics in detail for the years 1909 and 1902, by industries. Table 6, which is based on this table, gives for the leading mining industries the value of products in 1909 and 1902, with the percentage of increase.

Table 6	VALUE OF PRODUCTS.		Per cent of increase.
	1909	1902	
INDUSTRY.			
All industries.....	\$1,175,475,001	\$771,486,926	52.4
Coal.....	550,513,866	366,642,015	50.2
Anthracite.....	149,180,471	76,173,686	95.8
Bituminous.....	401,333,395	290,468,429	38.2
Petroleum and natural gas.....	175,327,807	102,034,590	72.0
Copper.....	99,493,799	51,178,036	94.4
Iron.....	106,947,082	65,460,985	63.4
Precious metals.....	87,671,553	82,482,052	6.3
Deep mines.....	77,434,301	77,154,326	0.4
Placer mines.....	10,237,252	5,327,726	92.2
Lead and zinc.....	28,568,547	14,600,177	95.7
Limestone.....	47,784,479	30,278,877	57.8
Granite and traprock.....	24,576,293	18,042,943	36.2
Phosphate rock.....	10,781,192	4,922,943	119.0

This table shows that the greatest relative increase in the seven-year period was in the phosphate rock industry. The smallest relative increase (6.3 per cent) was in the mining of precious metals, the deep mines showing an increase in value of products amounting to only 0.4 per cent, although the less important placer mines show an increase of 92.2 per cent. Large increases are shown for the mining of copper and of lead and zinc. There was also a large increase in the case of anthracite coal, but on account of the coal strike in 1902 the figures for that year do not represent normal conditions. The percentage of increase in the bituminous coal-mining industry falls considerably below the average for all mining industries in the period under consideration. To some extent this is due to a decline in the average price of bituminous coal, for the tonnage produced increased more than 45 per cent.

Table 25, page 557, gives comparative statistics in detail for the years 1909 and 1902, by states. The following table presents certain figures for those states which show a relative increase in the value of products above the average for the United States:

STATE.	VALUE OF PRODUCTS.		Per cent of increase.
	1909 *	1902	
Louisiana.....	\$6,539,850	\$279,327	2,241.3
Florida.....	8,915,181	2,943,806	202.8
Minnesota.....	58,975,781	25,620,677	130.2
Nebraska.....	322,517	148,391	117.3
New Jersey.....	8,548,858	4,042,047	111.5
Illinois.....	77,214,345	37,377,226	106.6
California.....	59,012,946	28,611,307	106.3
Wisconsin.....	8,575,402	4,257,685	101.4
Washington.....	10,826,503	5,393,659	100.7
Kansas.....	18,386,812	9,526,060	93.0
North Dakota.....	564,812	325,967	73.3
Arkansas.....	4,764,784	2,840,341	67.8
Texas.....	11,095,588	6,737,696	64.7

Corresponding figures for those states in which the value of products showed an actual decrease from 1902 to 1909 are given in Table 8.

Table 8

STATE.	VALUE OF PRODUCTS.		Per cent of decrease.
	1909	1902	
Colorado.....	\$39,397,859	\$40,508,286	2.7
Massachusetts.....	4,332,218	4,499,401	2.7
South Dakota.....	6,415,788	6,697,797	4.2
Georgia.....	2,924,741	3,080,287	5.0
Maine.....	3,270,766	3,656,134	10.5
Maryland.....	6,164,122	7,162,113	13.9
Indiana.....	22,324,647	26,896,393	17.0
Oregon.....	1,237,292	2,087,389	40.7

Colorado and Indiana are the only important mining states that show a decrease in mining activity. This decline in Colorado is manifested not only in the value of products, but also in the amount expended for salaries and wages, which decreased 7.2 per cent, and for royalties, which shows a decrease of 4.4 per cent.

Geographic distribution of the principal industries: 1909.—Table 9 gives statistics, by leading states, for each of the nine leading mineral industries. A graphic presentation of the same facts is made in the following diagram:

### VALUE OF PRODUCTS, LEADING INDUSTRIES, BY STATES: 1909.

South Carolina.....	5	1,307	16.0	862,409	8.0

Statistics are given for each of the states where the industry in question is important either by reason of the absolute value of the product or of its proportion of the total for the industry. In most of the industries here shown the production is so concentrated that the states given represent upward of nine-tenths of the entire production, but in the case of the lead and zinc, limestone, and granite industries, the aggregate value of the products reported by the states named falls short of this fraction.

Of the value of the products of the bituminous coal mines in 1909, Pennsylvania contributed more than one-third, and a group of five states—Pennsylvania, West Virginia, Ohio, Indiana, and Illinois—together reported more than two-thirds of the total. Including those just named, the table shows 16 states, situated in all parts of the Union, which had a product valued at more than \$5,000,000. The anthracite coal production is practically confined to the state of Pennsylvania.

Petroleum and natural gas also show production centers in various parts of the country. Pennsylvania leads, with a little over one-fifth of the total value of products for the industry, but does not report so large a proportion of the total as in the case of coal.

More than one-third of the value of products for the copper industry in 1909 was represented by the product of Montana, while Arizona and Michigan each contributed over one-fifth. More than one-half of the value of products for the iron industry in 1909 was contributed by Minnesota and somewhat less than one-third by Michigan.

In the production of precious metals by placer mining California was the only important state, while nearly one-third of the value of products for deep mines was reported from Colorado and over one-fifth from Nevada. The production of Alaska is not included in the table, which relates exclusively to continental United States. It may, however, be noted that the canvass of mines in Alaska by the Bureau of the Census gave \$12,762,000 as the value of the products of placer mining in that territory. The inquiry of 1909 was the first attempt to secure information concerning placer mining in Alaska by census methods. The wide extent of the field and the difficulties of the inquiry lead to the belief that the product reported is considerably short of the actual product of the Alaska placer mines.

The lead and zinc industry is geographically far more closely concentrated than any thus far considered. In 1909 Missouri reported 71.9 per cent of the total value of products of this industry and employed 75.5 per cent of the wage earners engaged therein. The phosphate rock industry shows a marked concentration in the state of Florida, which reported 78.7 per cent of the total value of products and employed 62.4 per cent of all wage earners in the industry. On the other hand, the production of limestone and granite is widely distributed. In the case of the limestone industry, the six states which had a product exceeding \$2,000,000 in value together reported but little more than two-thirds of the total value of products; and in the case of the granite industry the six states having a product in excess of \$1,000,000 in value reported only 57.5 per cent of the total. In addition the variation in value of products among the states named in the table is much less marked in the case of these industries than in most of the other industries listed.

## PERSONS ENGAGED IN MINING INDUSTRIES.

The number of persons engaged in mining industries, by classes, was ascertained as far as possible for December 15 of the year 1909. In those cases, however, where the mines were not in operation on that date, or the time records for that date were not obtainable, the numbers were ascertained for the nearest representative date. In addition to this information, the number of wage earners, without classification, was ascertained for the 15th day of every month.<sup>1</sup>

The whole number of persons engaged in connection with producing mines, quarries, and wells, as reported on December 15, or the nearest representative day, was 1,139,332, of whom 1,065,283 were wage earners. Since the representative day was taken in some other month than December, in many cases, because the mines were not in operation on December 15, as stated above, this number of wage earners is greater than the number actually engaged at any given time. The greatest number simultaneously employed in all producing mines was 1,022,885, this number being reported for November 15. This does not, however, represent the entire number of persons who gave all or a part of their time to mining in 1909. The busiest months do not coincide for all mining industries nor for all mines within a given industry. Mining, moreover, affords some contrast to manufactures with respect to employment. Whereas in the manufacturing cities there is some opportunity for wage earners to pass from one industry where employment is temporarily slack to another where labor is in greater demand, there is rarely sufficient diversity of mining industries in a given locality to permit such a shifting. Furthermore, even within an industry as widespread as bituminous coal mining, distance would largely prevent the employees of a mine temporarily shut down from seeking employment in other coal mines. The total number of wage earners reported for December 15, or the nearest representative day, namely, 1,065,283, may therefore be accepted as less, if anything, than the total number of wage earners who derived a livelihood from mining during the year 1909.

**Distribution by sex and age.**—Table 10 shows the classification of the persons employed in producing mines on the 15th day of December, or the nearest representative day.

Women were employed only in supervisory and clerical capacities, none being reported as wage earners in mining operations proper. It will be noted, moreover, that the reported number of boys under 16 years of age, 8,151, is less than 1 per cent of the whole number of wage earners employed.

<sup>1</sup> It must be borne in mind that the business year for which returns were obtained did not in all cases coincide with the calendar year. As a result, the total for the month of December includes a few returns for December, 1908, when the business year ended before Dec. 31, 1909. In such cases it was assumed that the number employed on the 15th day of December, 1909, was approximately equal to the number reported for Dec. 15, 1908. The same applies to the figures for other months, some of which were reported for 1908 and others for 1910. The statistics of the number of wage earners must, therefore, be regarded as approximations; they are sufficiently close, however, for purposes of general comparison.

Table 10

CLASS.	PERSONS ENGAGED IN PRODUCING ENTERPRISES: 1909		
	Total.	Male.	Female.
<b>All classes.....</b>	<b>1,139,332</b>	<b>1,135,528</b>	<b>3,804</b>

Petroleum and natural gas.....	62,172	19,353	2,988	39,831	31.1	4.8	64.1
Copper.....	55,258	661	1,454	53,143	1.1	2.7	96.2
Iron.....	55,176	1,109	1,837	52,230	2.1	3.3	94.6
Precious metals.....	43,191	4,508	868	37,815	10.4	2.0	87.6
Lead and zinc.....	24,397	2,525	269	21,603	10.4	1.1	88.5
Limestone.....	41,029	2,645	689	37,695	6.4	1.7	91.9
Granite.....	22,211	1,248	402	20,561	5.6	1.8	92.6
Phosphate rock.....	8,573	214	173	8,186	2.5	2.0	95.5

Of the whole number of persons engaged in producing enterprises, 4.3 per cent were proprietors and officials, 2.2 per cent were clerks and other salaried employees, and 93.5 per cent were wage earners. The proportion of proprietors and officials ranges, among the industries given, from 1.1 per cent in the copper industry to 31.1 per cent in the petroleum and natural gas industry. Large proportions for proprietors and officials occur also in the production of the precious metals and of lead and zinc. In the anthracite branch of the coal industry proprietors and officials formed only 0.7 per cent of all persons engaged in the industry. The range of difference with respect to the proportion of clerks is much less than with respect to the proportion of proprietors and officials.

**Proprietors performing manual labor.**—Table 12 gives, for the principal mining industries, the number of proprietors and firm members compared with the number and percentage who perform manual labor.

INDUSTRY.	PROPRIETORS AND FIRM MEMBERS IN PRODUCING ENTERPRISES: 1909		
	Total.	Performing manual labor.	
		Number.	Per cent.
All industries.....	29,922	8,861	29.6
Coal, bituminous.....	3,739	1,713	45.8
Petroleum and natural gas.....	16,213	2,155	13.3
Precious metals:			
Placer mines.....	951	673	70.8
Deep mines.....	2,011	951	47.3
Lead and zinc.....	1,947	1,171	60.1
Limestone.....	1,634	640	39.2
Granite.....	730	318	43.6

Mine operators of the old type who operate their mines without the assistance of hired help or with little help are still quite numerous, as appears from the fact that out of a total of 29,922 proprietors and

firm members in 1909, 8,861, or nearly three-tenths, were personally performing manual labor in or about their enterprises. The industries in which proprietors of this type were relatively the most numerous include bituminous coal mining, in which 45.8 per cent of the proprietors and firm members were performing manual labor; lead and zinc mining, and placer mining (surface gold washing), in each of which industries a majority of the proprietors were working in their own mines; and deep gold and silver mines, in which nearly one-half of all proprietors belonged to this class. There are also a considerable number of proprietors and firm members performing manual labor in the petroleum and natural gas industry, but as the whole number of proprietors and firm members is very large, they constitute a comparatively small percentage of the total.

**Wage earners by occupation.**—Table 13 gives for all mining industries and for the nine most important industries separately the number of wage earners in producing mines classified by specific occupation and by age group, distinguishing those who work above and those who work below ground.

CLASS OF WAGE EARNERS.	All mining industries.	COAL.			Petroleum and natural gas.	Copper.	Iron.	Precious metals.	Lead and zinc.	Limestone.	Granite.	Phosphate rock.

Men 16 years of age and over.....	695,204	597,533	472,795	124,738	30,657	27,172	22,479	13,536	13,536	.....	.....	261
Engineers, firemen, mechanics, etc.....	9,933	7,957	5,437	2,520	622	476	598	161	161	.....	.....	.....
Miners and miners' helpers.....	549,133	467,179	384,023	83,156	27,301	20,190	18,985	12,125	12,125	.....	.....	258
All other wage earners.....	136,138	122,397	83,335	39,062	2,734	6,606	2,896	1,250	1,250	.....	.....	3
Boys under 16 years of age.....	3,117	2,917	2,904	18	5	169	3	5	5	.....	.....	.....

This table gives further information in regard to the employment of boys under 16 years of age. Only eight-tenths of 1 per cent of the wage earners in all mining industries were boys under 16 years of age, and of these only three-eighths were employed below ground. The largest number of boys under 16 years of age (3,721) were employed in bituminous coal mining, though 3,247 were employed in the anthracite coal-mining industry, where they formed nearly 2 per cent of the whole number of wage earners—a higher percentage than in any other industry shown in the table. Most of the boys in the anthracite coal industry, however, were employed above ground. In none of the other industries shown in the table did the proportion of boys under 16 years of age reach 1 per cent of the whole number of wage earners.

Miners and miners' helpers, quarrymen, and stonecutters constitute the most numerous class of wage earners, forming, in 1909, 58.9 per cent of the whole number employed in all industries combined. The proportion of miners and miners' helpers reached 67.4 per cent in the bituminous coal industry and 47.9 per cent in anthracite coal mining. It was about the same in the iron mines, but somewhat greater in the other industries employing miners. In the limestone and granite industries quarrymen and stonecutters are naturally the largest numerical group.

The wage earners included under the heading of "Engineers, firemen, mechanics, etc.," constituted 9.7 per cent of all wage earners employed in mining in 1909. The proportion was lowest in the coal industry, where such wage earners formed 5.7 per cent

of the total, and highest in the petroleum and natural gas industry, where they constituted 67.9 per cent. The miscellaneous group "All other wage earners," which is composed mostly of unskilled laborers, comprised 30.6 per cent of all wage earners employed. The proportion in this class was largest in anthracite coal mining (43.1 per cent) and smallest in the granite industry (20.7 per cent).

In all mining industries about one-third of the wage earners (34.4 per cent) were employed above ground and about two-thirds (65.6 per cent) below ground. The two branches of the coal-mining industry have a larger proportion of their wage earners below ground than any other mining industry. In the phosphate rock industry only 3.2 per cent of the wage earners were employed below ground, while three of the industries named in the table—the petroleum and natural gas, limestone, and granite industries—are exclusively surface industries.

**Contract work.**—In addition to the work performed by wage earners regularly engaged in mining and by the proprietors who contribute their own labor to the operation of the mines, a portion of the work incident to mining is done by contract. The number of wage earners employed by contractors can not be ascertained, because the work is temporary and the same men after completing one job are shifted to another place. A special form of contract work common in certain metalliferous mines is the working of mines in return for a share of the product. Under this system a miner "leases" a block in a mine on a royalty basis; the product is delivered by him to the mine owner, who disposes of it, deducts the royalty, and pays the "lessee" his share. In the operation of petroleum and natural gas wells, little labor is required. This condition has called into existence a special class of mechanics who contract with individual operators to take care of their properties, devoting to each property only a part of their time.

The relative importance of work done under contract, as compared with the work performed by regular wage earners, is shown by a comparison of the total amount paid out in wages with the total expenditure for contract work. While the total wages paid in the United States in 1909 amounted to \$586,774,000, the total expenditure for contract work amounted to \$28,888,000, which included \$3,798,000 paid to miners compensated by a share of the product, and \$1,035,000 paid to part-time men for taking care of petroleum and natural gas wells. There were 3,261 operators, or 16.4 per cent of the total number in the United States, whose properties were operated exclusively by contract work, as defined above. This form of operation was more or less general with operators of petroleum and natural gas wells, of whom 3,021, or 38.8 per cent, belonged to this class. Next in point of numbers were 104 operators of deep mines of precious metals, or 6.5 per cent of all operators engaged in

that industry, who employed contract labor exclusively. In all other industries combined this class included only 136 operators, or 1.3 per cent of the total.

**Number of persons employed, by months.**—Table 14 shows the number of wage earners reported for the 15th of each month in producing enterprises in all mining industries combined and in coal mining separately, the latter industry, as already noted, including nearly 70 per cent of all wage earners in producing enterprises.

Table 14

WAGE EARNERS IN PRODUCING ENTERPRISES: 1909

MONTH.	All mining industries.		Coal.		All other mining industries.	
	Number.	Per cent of maximum.	Number.	Per cent of maximum.	Number.	Per cent of maximum.
January.....	940,119	91.9	691,244	94.8	248,875	80.7
February.....	936,418	91.5	686,322	94.1	250,096	81.2
March.....	943,493	92.2	679,791	93.2	263,702	85.5
April.....	928,563	90.8	649,870	89.1	278,693	90.4
May.....	987,002	91.6	646,592	88.7	290,410	94.2
June.....	949,615	92.8	652,894	89.5	296,721	96.2
July.....	961,940	94.0	659,434	90.4	302,506	98.1
August.....	971,263	95.0	667,146	91.5	304,117	98.6
September.....	993,075	97.1	685,234	94.0	307,841	99.8
October.....	1,013,326	99.1	704,939	96.7	308,387	100.0
November.....	1,022,885	100.0	720,341	98.8	302,544	98.1
December.....	1,013,895	99.1	729,273	100.0	284,622	92.3

For all industries combined the largest number of wage earners, 1,022,885, was reported for November and the smallest, 928,563, or 90.8 per cent of the maximum, for April. The figure for April, however, is only slightly below the figures for the three preceding months of the year. From April to November the number increased gradually, but December showed a slight falling off. In coal mining the month of greatest activity was December, and that of least activity was May, when the number employed was equal to 88.7 per cent of the number employed in December. From May to December there was a steady increase in the number of wage earners employed. It should be noted that the figures in this table furnish only a most unsatisfactory indication of the regularity of employment. In the coal-mining industry in particular many mines operate only part of the days each week or each month, and while the number of wage earners on the rolls on the 15th of the month (which is more often reported than the number actually drawing pay) may be substantially the same from month to month, yet the average number of days each miner works during the year may be much less than the possible number of working days. In other words, there is a good deal of unemployment so distributed through the year as not to cause much fluctuation in the monthly returns.

For the principal industries Table 15 shows the month of maximum and of minimum employment, the number reported for each of these months, and the percentage which the minimum represents of the maximum.

Table 15

WAGE EARNERS IN PRODUCING ENTERPRISES: 1909

INDUSTRY.	Maximum.		Minimum.		Per cent of maximum.
	Month.	Number.	Month.	Number.

Granite.....	Sept....	21,899	Jan....	13,732	62.7
Phosphate rock.....	July....	8,114	Oct....	7,610	93.8

The coal industry is divided in this table into its two constituent branches. Anthracite mining shows greater regularity of employment from month to month than bituminous mining. It will be noted that the months of maximum and minimum employment for the two branches do not correspond. For the remaining industries the month of maximum employment is generally in the fall of the year except in the case of the production of precious metals and of phosphate rock, where it is July. The quarrying industries, limestone and granite quarrying, show a wide divergence between the months of maximum and minimum employment, due to the fact that they are surface industries and much affected by weather conditions. For both industries the smallest number of wage earners was reported for January.

Prevailing hours of labor.—In Table 16 producing mines and quarries have been classified according to the prevailing hours of labor per day in each enterprise. Petroleum and natural gas wells are not included in this table, because many of them are operated without hired labor, or by men who give to each enterprise only a part of their time. Neither are those enterprises included in which all labor is performed by contractors. The table shows the percentage of the total number of enterprises falling into each group, and a percentage distribution in which each enterprise has been given a weight according to the total number of wage earners employed on December 15, 1909, or the nearest representative day. It should be clearly borne in mind that these latter percentages do not show precisely the proportion of the total number of wage earners working the specified number of hours per day, since in many cases some of the employees work a greater or less number of hours than those generally prevailing in the enterprise. The table shows that about one-half of the enterprises have adopted the 8-hour day, while the other half are operated on a 9-hour or 10-hour basis. There is considerable variation in this respect among the several mining industries. The prevailing hours are 8 or less per shift in more than nine-tenths of the deep gold and silver mines, more

than five-sixths of the copper mines, about three-fourths of the lead and zinc mines, more than two-thirds of the bituminous coal mines, about three-fifths of the placer mines, and slightly less than one-half of the granite quarries. The 9-hour shift is predominant in anthracite coal mines and the 10-hour day in iron mines, limestone quarries, and the phosphate rock industry. In very few mines do the prevailing hours exceed 10 per shift, the only conspicuous exception being the phosphate rock industry, in which 11 or 12 hours per shift constitute the prevailing hours for over one-fourth of the enterprises.

## LAND TENURE.

In mining, as in agriculture, the land is the source from which wealth is drawn, and the control of land is an important factor in mining operations. The Thirteenth Census was the first at which the inquiry into land tenure was extended to all branches of the

mining industry. Table 17 gives, for all mining industries combined and for the nine most important industries separately, statistics of the land controlled, distinguishing the character of the land and also the form of tenure.

Table 17

<sup>1</sup> Inclusive of 11,689 acres reported both in acreage owned and acreage held under lease.

<sup>2</sup> Inclusive of 10,975 acres reported both in acreage owned and acreage held under lease.

The total acreage of all land controlled by producing enterprises was 24,216,000 acres. Of course, not all of this area was in actual use, large tracts being held in reserve. The greater part of this land was mineral and oil land, but there were 1,139,000 acres of timber land and 1,662,000 acres of other land. Under these two headings are comprised land which had not been prospected and whose mineral resources were still unknown, as well as some land used for building and other purposes.

In comparing the statistics of land controlled for different industries or different states, it should be noted that the area of land is not necessarily an index of the importance of the holdings, as some land is far more rich in minerals than other land.

Of the total area controlled by operators of mining enterprises in 1909, more than one-half was connected with the petroleum and natural gas industries. Of the remainder, by far the largest part was reported for the coal industry. The holdings of the bituminous mines are far more extensive in comparison with the value of the products of those mines than those of the anthracite mines. The holdings of land by operators of iron mines are also very considerable. Some indication of the amount of reserve land held

in the different industries is afforded by the proportion reported under the description of "Timber land" and "Other land." This proportion is greatest in the iron industry.

Of the total amount of land controlled by mine operators, 38.8 per cent was owned by the operators themselves and the remainder held under lease. The petroleum and natural gas industry, in which most of the land is held under lease, presents a marked contrast to all the other industries shown in the table. Excluding the land controlled in the petroleum and natural gas industry, operators in other mining industries controlled 11,521,000 acres, of which 8,703,000 acres, or 75.5 per cent, were owned by the operators. The two industries showing the widest departure from this proportion are the copper industry, in which the operators owned 98.2 per cent of the land controlled, and the phosphate rock industry, where the proportion of land owned was 96.2 per cent. The proportions owned in the coal industry and its two branches—72.7 per cent for the industry as a whole, 68.1 per cent for the anthracite branch, and 73 per cent for the bituminous branch—fell somewhat below the proportion given above for all mining industries exclusive of the petroleum and natural gas industry.

## FORM OF ORGANIZATION.

Table 18 on the next page has for its purpose the presentation of conditions with respect to the form of organization of producing mining enterprises for all mining industries combined and the nine leading industries separately.

The most important distinction brought out by the table is that between corporate and all other forms of organization. Among 19,915 operators of producing mines, quarries, and wells, 7,041, or 35.4 per cent, were corporations. These incorporated enterprises,

however, employed 90.6 per cent of the wage earners engaged in mining enterprises, and reported 91.4 per cent of the total value of products. Individuals formed 32.1 per cent of the whole number of operators, but they employed only 3.9 per cent of the wage earners and are credited with only 3 per cent of the total value of products. The proportions for firms differ but little from those for individuals, being slightly less in the case of the number of operators and slightly greater in the case of the number of wage earners and the value of products. Moreover, it may be noted that while the average value of products was \$160,832 per operator for corporations, it was only \$9,136 for firms and only \$5,723 for individuals.

Corporations constituted a majority of the operators in the phosphate rock industry (88.2 per cent), the iron industry (73.3 per cent), the copper industry (67.4 per cent), and the coal industry (52.6 per cent). In the copper industry corporations employed 99 per cent of the total number of wage earners. Other industries where a very large percentage of the wage earners were employed by corporations are iron mining (98.1 per cent), the phosphate rock industry (95.8 per cent), and coal mining (93.6 per cent). More than 90 per cent of the total value of products in the mining industry as a whole was credited to corporations. The largest percentages for the individual industries were as follows: The iron industry, 99.6 per cent; the copper industry, 99.1 per cent; the phosphate rock industry, 96.4 per cent; the coal-mining industry, 94.4 per cent; and the precious metal industries, 92.2 per cent. The two quarrying industries—the limestone and granite industries—are the only ones shown in the table in which as much as 25 per cent of the total value of products is credited to other than corporate enterprises.

## SIZE OF ENTERPRISES.

The tendency toward concentration in the mining industries can be measured by a classification of mine operators according to the number of wage earners employed or according to the value of the products per operator.

Classification according to number of wage earners.—Table 19, on the next page, gives, for all mineral industries combined and for the most important individual industries, a classification of producing enterprises according to the number of wage earners employed, and shows for each class the number of operators and the number of wage earners. It does not include those mines and quarries which were worked on contract or for a share of the product, nor does it include the petroleum and gas wells which were cared for by part-time employees.

It is worthy of note that the most numerous type of mine operator is the small producer, about three-fifths of all operators employing only from 1 to 20 men each,

while more than one-tenth of all operators employed no wage earners at all. On the other hand, more than one-half of the total number of mine workers were employed by operators employing more than 500 men each, although such operators constituted only 1.7 per cent of the total number of operators. The degree of concentration varies in different industries. In anthracite coal mining over five-sixths of all wage earners were employed by the 18 largest operators, each of whom employed 1,000 or more men. Copper mining follows next, three-fourths of the wage earners in this industry being employed by the 12 largest operators, with a force of over 1,000 men each. Iron mining holds the third place, with 9 operators of this class employing more than one-half of the wage earners. There is also a large degree of concentration in bituminous coal mining, where 77 operators of this class, constituting 2.2 per cent of the total number, employed nearly one-half of the wage earners.

In the production of petroleum and natural gas the degree of concentration is not as high as in the mining of coal, iron, and copper; the 8 largest operators, however, employed over two-fifths of the wage

earners. On the other hand, in precious metal mining, lead and zinc mining, and stone quarrying, small-scale production is still the predominant type.

<sup>1</sup> Based on number reported for Dec. 15, 1909, or nearest representative day.

A marked distinction with respect to the degree of concentration exists between regular producing mines, quarries, and wells, on the one hand, and nonproducing properties on the other. The latter includes for the most part enterprises which are still in the development stage, as well as others which have had a product in the past but whose present operations are confined to the maintenance of the property, or to development work with a view to resuming production.

About two-thirds of all the wage earners engaged in nonproducing mining properties were employed by operators employing not exceeding 20 wage earners each. The largest enterprises in this class were represented by 12 operators employing from 101 to 500 wage earners each. On the other hand, more than one-half of all wage earners engaged in producing mines were employed by operators with a working force of 500 men or over.

Table 20 shows the distribution of operators according to the number of wage earners for producing and nonproducing properties separately.

Classification according to value of products.—Table 21 gives, for all mining industries and for the most important industries separately, a classifica-

tion of the operators according to value of products per operator, and shows, for each class, the number of operators and the total value of products.

Table 21

\$1,000,000 and over.....	21	13.0	124,762,730	92.7					

The relative importance of small-scale and large-scale production in mining can be seen from the fact that the 11,384 operators reporting products valued at less than \$5,000, though they constituted 57.2 per cent of the total number of operators, reported only 1.5 per cent of the total value of products, while the 164 operators reporting products valued at more than \$1,000,000, though they formed less than 1 per cent of the whole number of operators, reported 57.5 per cent of the total value of products. The degree of concentration varies in the different industries, operators

reporting products of more than \$1,000,000 in value contributing 92.7 per cent, as measured by value, of the copper product, 84.2 per cent of the iron ore, 84.2 per cent of the anthracite coal, 52.1 per cent of the bituminous coal, 46.2 per cent of the petroleum and natural gas, 43.4 per cent of the precious metals, and 41.2 per cent of the lead and zinc. In the phosphate rock industry which reported a total value of products of \$10,781,192 there was one operator whose products were valued at more than \$1,000,000. The other mining industries do not show so high a degree of concentration.

## EXPENSES.

The census does not purport to furnish figures which can be used for determining profits or exact cost of production.

Table 22 shows, however, for 1909, in percentages, the distribution of expenses in producing enterprises by classes for all mining industries combined and for the most important industries separately. This table shows that for all industries combined 61.4 per cent of the total expenses were incurred for services—that is, salaries and wages—23.8 per cent for supplies, materials, and fuel, 6.1 per cent for royalties and rent of mines, and 8.7 per cent for all other purposes.

Table 22

INDUSTRY.	PER CENT OF TOTAL EXPENSES REPORTED FOR PRODUCING ENTERPRISES. <sup>1</sup>				
	Salaries.	Wages.	Supplies, materials, and fuel.	Royalties and rent of mines.	Miscellaneous.
<b>All industries.....</b>	<b>5.1</b>	<b>56.3</b>	<b>23.8</b>	<b>6.1</b>	<b>8.7</b>
<b>Coal:</b>					
Anthracite.....	3.2	66.3	19.2	5.7	5.6
Bituminous.....	5.5	74.3	12.1	3.1	5.0
Petroleum and natural gas.....	5.3	20.0	37.8	15.7	21.2
Copper.....	3.4	45.9	44.2	1.7	4.8
Iron.....	4.6	40.1	23.3	20.5	11.5
Precious metals.....	5.6	44.4	37.7	1.7	10.6
Lead and zinc.....	4.1	43.2	37.6	9.4	5.7
Limestone.....	7.2	59.0	22.0	2.0	9.7
Granite.....	6.6	63.6	18.6	1.2	7.0
Phosphate rock.....	8.0	43.3	30.4	4.7	13.6

<sup>1</sup> For absolute figures on which these percentages are based, see Table 23, p. 562.

As would be expected, the proportions vary considerably in the different industries. The largest percentage for services (79.8) is shown for the bituminous branch of the coal-mining industry, the smallest percentage (25.3) being reported for the petroleum and natural gas industry. The proportion for supplies, materials, and fuel varies from 44.2 per cent for the

copper industry to 12.1 per cent for bituminous coal mining; the proportion for royalties and rent of mines, from 20.5 per cent for iron mining to 1.2 per cent for granite quarrying; and the proportion for miscellaneous expenses, from 21.2 per cent for the petroleum and natural gas industry to 4.8 per cent for the copper industry.

### POWER.

Table 23 shows, for all mining industries and for the most important industries separately, the number of engines or other motors, according to their character, employed in generating power (including electric

motors operated by purchased current), and their total horsepower. It also shows separately the number and horsepower of electric motors which were run by current generated by the same establishment.

Table 23

Phosphate rock.....	50,528	50,426	549	46,817	32	3,609			1	100	339	21,388

Of the total primary power used in mining, 4,402 554 horsepower, or 95.5 per cent, was owned by the mine operators, only 205,699 horsepower, all of which was electric power, being rented. The total amount of electric power used, including that generated at the mines, aggregated 699,420 horsepower. Nearly three-fourths of the total rented power was reported from the Mountain and Pacific states, where the abundance

of water power and the scarcity of coal makes the transmission of electric power profitable. The ownership of water power by mine operators was insignificant, except in the production of the precious metals, which is mainly confined to the group of states above mentioned. Of the horsepower generated by gas or gasoline engines, 91.6 per cent was utilized in the petroleum and natural gas industry.

### QUANTITY OF MINERALS.

The statistics relating to quantity of minerals were collected in cooperation with the United States Geological Survey, but the results given in Table 24 vary slightly from those published by that bureau. The latter relate in every case to the calendar year 1909, whereas the census data are for the business year of each establishment, to accord with the statistics of persons employed in mining industries as well as with the expenses incurred. Moreover, the figures presented in the table deal with products sold or used by the mine operators, whereas the statistics of the United States Geological Survey in many cases show the quantities actually produced during the calendar year.

For metalliferous, other than iron, mines the United States Geological Survey publishes the quantities of metals recovered by refineries which the ore ultimately reaches, whereas Table 24 relates to the crude products sold by mine operators. Thus the gold content of all domestic ore mined in continental United States, and sold in the crude state, together with the assay content of mill and placer bullion, as given in the table, aggregated 3,876,943 fine ounces, whereas the production of refined gold in continental United States, as estimated by the United States Geological Survey in cooperation with the Director of the Mint, was 3,837,773 ounces; the difference does not exceed 1

per cent of the total production. Likewise, the assay content of all silver ore and mill and placer bullion produced in the United States, as reported by mine operators, was 57,294,492 ounces, whereas the total production of refined bullion in the United States, including Alaska, as estimated by the Director of the Mint and reported by refineries to the Bureau of the Census, aggregated in round figures 54,500,000 fine ounces, the variance being due in greater part to losses in recovery.

No quantities for structural materials are presented in the table below, by reason of the great diversity in the units of measure, depending on quality as well as on the uses for which the stone is intended. The only common measure for the production of building stone is value.

Where the products of a given industry were marketed by some establishments in crude state and by others in dressed or refined state, the figures below are presented as reported by the operators.

Table 24

<sup>1</sup> Exclusive of governmental institutions, and of the coke and cement industries, but including figures for the lime industry.

<sup>2</sup> Exclusive of duplications resulting from the use of products of some enterprises as materials for others within the same industry.

<sup>3</sup> Embraces Oklahoma, Rhode Island, and South Carolina for both years and the District of Columbia for 1909. These states are not shown separately, nor are they included in the totals for their respective geographic divisions, because to do so would disclose individual operations.

<sup>4</sup> Exclusive of the amount paid to miners compensated by a share of the product for both years, and also of the wages of part-time employees for the petroleum and natural gas industries for 1909, which are included under "Contract work" in other tables for 1909.

## ABSTRACT OF THE CENSUS—MINING.

<sup>1</sup> Exclusive of governmental institutions and of the coke and cement industries, but including figures for the lime industry.

<sup>2</sup> Exclusive of duplications resulting from the use of the products of some enterprises as materials for others within the same industry.

<sup>3</sup> Exclusive of the amount paid to miners compensated by a share of the product for both years, and also of the wages of part-time employees for the petroleum and natural gas industry for 1909, which are included under "Contract work" in other tables for 1909.

<sup>4</sup> A minus sign (-) denotes decrease.

<sup>5</sup> The totals for all industries include, besides those specified, a few industries which could not be separately shown without disclosing the operations of individual operators. The value of products of those industries was less than 0.1 per cent of the total for all industries in 1909 and 0.3 per cent in 1902.

## PRODUCING MINES, QUARRIES, AND WELLS—CAPITAL, EXPENSES, VALUE OF PRODUCTS, PERSONS ENGAGED

Table 27					EXPENSES OF OPERATION AND DEVELOPMENT.						
DIVISION AND STATE.	Number of operators.	Number of mines and quarries.	Number of wells.	Capital.	Total.	Services.			Supplies, materials, and fuel.		
						Salaried officers of corporations, superintendents, and managers.	Clerks and other salaried employees.	Wage earners.	Supplies and materials.	Purchased ore and natural gas (duplication in product).	Fuel and rent of power.

<sup>1</sup> Exclusive of duplications, 307 operators having reported in two or more states. Such duplications have not been excluded in the totals for the several geographic divisions.

<sup>2</sup> Includes \$59,468,780 which could not be distributed among the several states.

<sup>3</sup> In some cases the same operator conducted enterprises in two or more states, all such enterprises being managed through one central administrative office. In such cases it was impossible to assign the corporate officers and the central office force to any particular state; this was also the case in respect to contract work and taxes, which were reported in a lump sum for all properties. The total central office expenses were accordingly apportioned among the several states pro rata to the total expenses reported for each state and the estimated amounts of such administrative expenses were added to "Sundry expenses." In the totals for the United States, however, the number of officers and salaried employees, as well as their salaries, and the amount of contract work and taxes, appear under the proper heads. The amounts thus included in the item of "Sundry expenses" for individual states and distributed in the totals for the United States are as follows: Officers, \$92,399; clerks, \$645,899; taxes, \$142,240; and contract work, \$61,801.

# INDUSTRIES AND STATES.

561

IN MINING INDUSTRIES, LAND CONTROLLED, AND POWER, FOR THE UNITED STATES, BY STATES: 1909.

EXPENSES OF OPERATION AND DEVELOPMENT—contd.					PERSONS ENGAGED IN MINING INDUSTRIES.							Land controlled (acres).	Primary horse-power.
Miscellaneous.				Value of products.	Aggregate.	Proprietors and officials.				Clerks and other salaried employees.	Wage earners Dec. 15, or nearest representative day.		
Royalties and rent of mines.	Taxes.	Contract work.	Rent of offices and other sundry expenses.			Total.	Proprietors and firm members.	Salaried officers of corporations, superintendents, and managers.

<sup>1</sup> Includes \$4,876,095 which can not be distributed among the several industries.

<sup>2</sup> In some cases the same operator conducted two or more quarries producing different kinds of stone, all quarries being managed through one central administrative office. In such instances it was impossible to assign the corporate officers and the central office force to any particular quarry; this was also the case in respect to taxes, which were reported in a lump sum for all properties. The total central office expenses were accordingly apportioned among the several industries in proportion to the total expenses of each, and the estimated amounts of such administrative expenses were added to "Sundry expenses" for each industry. In the totals for "Structural materials," however, the number of officers and salaried employees, as well as their salaries, and the amount of taxes, appear under the proper heads. The amounts thus included in the item of "Sundry expenses" for individual industries and distributed in the totals for "Structural materials" are as follows: Officers, \$389,239; clerks, \$242,325; and taxes, \$27,767.

## PERSONS ENGAGED IN MINING INDUSTRIES, AND POWER, FOR THE UNITED STATES, BY INDUSTRIES: 1909.

EXPENSES OF OPERATION AND DEVELOPMENT—continued.								PERSONS ENGAGED IN MINING INDUSTRIES.								
Miscellaneous.				Per cent of total.			Value of products.	Aggre- gate.	Proprietors and officials.				Clerks and other salaried em- ployees.	Wage earners Dec. 15, or nearest representative day.	Primary horse- power.	
Royalties and rent of mines.	Taxes.	Contract work.	Rent of offices and other sundry expenses.	Serv- ices.	Sup- plies.	Mis- cella- neous.			Total.	Proprietors and firm members.	Salaried officers of cor- porations, super- intend- ents, and man- agers.					
										Total.	Num- ber per- forming manual labor.

# SUPPLEMENT FOR TEXAS

POPULATION  
AGRICULTURE  
MANUFACTURES  
MINES AND QUARRIES

## CHAPTER 1.

### NUMBER OF INHABITANTS.

**Introduction.**—This chapter gives the population of Texas, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 576) shows the population of Texas, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. In this table the counties are arranged alphabetically, while the primary divisions in each county, except a few not returned by precincts, are given in numerical order. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. This is for the most part due to the territorial changes that have been made in the minor civil divisions of certain counties since 1900. In a few cases, however, the population of certain divisions returned separately at one census was returned in combination with that of other divisions at another census.

Table 2 (p. 593) shows the cities and the incorporated towns and villages of Texas, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Texas, by counties, at each of the last five censuses, from 1870 to 1910, inclusive;

the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

**Density of population.**—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

**Minor civil divisions.**—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, justice precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

**Urban and rural population defined.**—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions as *they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900

**HISTORICAL NOTE.**—Texas was named from the Tejas Indians, who once occupied part of the region now constituting this state. The meaning of the name is uncertain but it probably signifies "friends."

The first explorations of the area now constituting Texas were made by the Spaniards, Cabeza de Vaca, who wandered about in the southern part, 1528-1536, and Coronado, who crossed the northern part, 1540-1542. Other Spaniards visited the Texas country during the next hundred years, but the first attempt at settlement was made in 1685 by the French under La Salle. This attempt, though unsuccessful, incited the Spaniards to make settlements, the most important of which was begun at San Antonio in 1718. In 1728 the territory with vaguely defined limits was formed into a province of Spain.

The boundary between the Spanish possessions and the United States was in dispute during the early years of the nineteenth century, but in 1819, at the time of the Florida Purchase, the eastern and northern limits of the Spanish possessions were agreed upon and defined.

In 1821 Mexico, by revolution, became an independent nation, and three years later Texas and Coahuila were united into a single Mexican state.

Many settlers came to Texas from the United States, and their discontent with Mexican rule resulted in a successful revolution in 1835-36. In March of the latter year a constitution was adopted for the republic of Texas, which continued an independent existence until 1845, when it was annexed to the United States. Mexico's refusal to recognize the independence of Texas, together with a boundary dispute, led to war with the United States, which began early in 1846 and was brought to a close in 1848, when Mexico formally relinquished its claims to Texas, and to all lands north of the present southern boundary of California, the river Gila, and a line a little north of the thirty-second parallel.

From 1836 to 1850 Texas claimed as its southwestern and western boundaries the Rio Grande and a line drawn north from the source of that river to latitude 42°, the eastern and northern boundaries were formed by the limits of the Louisiana Purchase as defined in the Florida Purchase treaty of 1819. Texas thus included during this period, in addition to its present area, territory now constituting parts of New Mexico, Oklahoma, Kansas, Colorado, and a small part of southern Wyoming. In 1850 the state sold to the Federal Government for \$10,000,000 that part lying outside its present limits.

and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported

at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

### TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

**Population of the state.**—The population of Texas is 3,896,542. Compared with a population of 3,048,710 in 1900, this represents an increase during the last decade of 847,832, or 27.8 per cent. During the same period the total population of the United States increased 21 per cent. The growth of the state was somewhat slower than during the preced-

ing decade, 1890–1900, when the rate was 36.4 per cent.

The following table shows the population of Texas at each census from 1850 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	3,896,542	847,832	27.8	21.0
1900.....	3,048,710	813,183	36.4	20.7
1890.....	2,235,527	643,778	40.4	25.5
1880.....	1,591,749	773,170	94.5	30.1
1870.....	818,579	214,364	35.5	22.6
1860.....	604,215	391,623	184.2	35.6
1850.....	212,692			

Texas was admitted as a state in 1845 and appears in the Federal census reports for the first time in 1850. Since that time Texas has grown rapidly, its population nearly trebling during the first decade, 1850–1860, more than doubling during the 20 years, 1860–1880, and nearly doubling again in the 20 years from 1880 to 1900.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that during each decade since 1850 the rate of increase for the state has been higher than the rate for the United States, the greatest difference between the two rates being for the decade 1850–1860 and the smallest difference for the last decade. The population of the state in 1910 was more than eighteen times its population in 1850, while the population of the United States in 1910 was not quite four times that in 1850.

**Principal cities.**—Texas has 132 cities. San Antonio, the largest, has a population of 96,614, and Dallas, the second city, a population of 92,104. Houston and Fort Worth, with 78,800 and 73,312 inhabitants, respectively, are the other cities in the state having over 50,000 inhabitants. There are also 4 cities having from 25,000 to 50,000, 12 having from 10,000 to 25,000, 18 having from 5,000 to 10,000, 32 having from 2,500 to 5,000, and 62 having less than 2,500 inhabitants.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible,

for 1900 and 1890. The table on page 569 shows the population of the 8 cities having in 1910 over 25,000 inhabitants, as reported at each census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

Of the cities included in this table, five—Dallas, El Paso, Fort Worth, Houston, and San Antonio—show a rate of increase for the last decade of more than 75 per cent. Fort Worth shows the highest rate of increase during the last decade, namely, 174.7 per cent, and Waco the lowest, 27.7 per cent. Aside from Galveston, which shows a decrease of 2.1 per cent during the last decade, Austin and Waco are the only cities showing a slower growth during the last than during the preceding decade.

**Counties.**—Texas has 245 counties, of which 6 are unorganized. The population of these counties ranges from 65 in Cochran County to 135,748 in Dallas County.

The following territorial changes have been made in the counties of Texas since 1900: Part of Tom Green County was taken in 1903 to form Reagan County and part of Pecos County was taken in 1905 to form Terrell County.

Owing to the organization since 1900 of two new counties from parts of other counties as shown above, the increase or decrease in population is calculated for only 241 counties and for two combinations of counties. The combinations of counties are Reagan

with Tom Green, and Terrell with Pecos. In order to determine the actual rate of increase for these counties, it is necessary to add the population of the new county to that of the old county from which it was formed. Two hundred and seven counties and the two combinations of counties increased in population during the last decade. Of the 207 counties that show increases, 12 show rates of increase over 1,000 per cent. These high percentages are for the counties which in 1900 were practically uninhabited, but which since that time have become more or less settled. Of the remaining counties showing increases, 74 show percentages of increase over 100. Brazos County shows the smallest rate of increase, namely, three-tenths of 1 per cent.

The largest absolute increase in any county, 56,196, representing a percentage of 107.3, was shown by Tarrant. The combined counties of Reagan and Tom Green increased 168.6 per cent, while Terrell and Pecos increased 48.3 per cent. Thirty-four counties decreased in population during the last decade, the rates of decrease ranging from 1.1 per cent in Madison County to 22.4 per cent in Washington County. The aggregate increase of population from 1900 to 1910 in the two combinations of counties and in the 207 counties that showed increases was 913,002; the aggregate decrease of population in the 34 counties that showed decreases was 65,170. The difference, 847,832, is, of course, the total increase of population in the state.

<sup>1</sup> A minus sign (—) denotes decrease.

The maps on pages 572 and 573 show the increase or decrease in the total and the rural population, respectively, of each county of Texas during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

**Density of population.**—The total land area of the state is 262,398 square miles. The average number of persons to the square mile in 1910 was 14.8; in 1900 and 1890 it was 11.6 and 8.5, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on pages 574 and 575, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 or more, but not excluding the land area of such places.

El Paso County, with 9,331 square miles, has the largest area, and Rockwall County, with 149 square

miles, has the smallest area. Dallas County, containing Dallas city, has the highest density of any county, namely, 158 persons per square mile, while Cochran County has the lowest density, namely, 0.1.

**Minor civil divisions.**—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Texas, of the 239 organized counties, 236 are divided into 1,484 primary divisions, comprising 1,456 justices' precincts and 28 commissioners' precincts. There are also 320 secondary divisions, comprising 132 cities, 180 incorporated towns, and 8 incorporated villages. These secondary divisions usually form parts of the precincts in which they are wholly or partly located, but 2 cities are coextensive with precincts.

**Urban and rural population compared.**—The following table presents the population of Texas at the censuses of 1910, 1900, and 1890, respectively, distributed among cities, towns, and villages, grouped according to specified limits of population, together with the

percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census. For the purposes of this table Texarkana city is included in the group of urban places having from 10,000 to 25,000 inhabitants, although it

had a population of only 9,790 in 1910, 5,256 in 1900, and 2,852 in 1890. This is due to the fact that Texarkana city, Tex., and Texarkana city, Ark., each separately incorporated, are together commonly known as Texarkana city, with a joint population of 15,445 in 1910, 10,170 in 1900, and 6,380 in 1890.

CLASS OF PLACES	1910		1900		1890		PER CENT OF TOTAL POPULATION.

Rural territory.....		2,958,438		2,527,951		1,886,016	75.9	82.9	84.4
Cities, towns, and villages of less than 2,500 inhabitants.....	229	256,305	141	160,208	140	131,904	6.6	5.3	5.9
Other rural territory.....		2,702,133		2,367,743		1,754,112	69.3	77.7	78.5

As shown by the above table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 938,104 inhabitants, or 24.1 per cent of the total population, while 2,958,438 inhabitants, or 75.9 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities and incorporated towns then having 2,500 inhabitants or more—contained 520,759 inhabitants, or 17.1 per cent of the total population, while 2,527,951 inhabitants, or 82.9 per cent, lived in rural territory. There has thus been since 1900 a considerable increase in the proportion of urban population. The change in the preceding decade was in the same direction but less marked. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

In 1910 the combined population of the cities of 25,000 inhabitants or more constituted 12.1 per cent of the total population of the state; the corresponding percentage in 1900 and 1890 was 6.7 and 5.9, respectively. The urban places having less than 25,000 inhabitants at the censuses of 1910, 1900, and 1890 contributed 11.9, 10.4, and 9.7 per cent, respectively, of the total population of the state.

The urban population of the state is contained in 70 cities and 21 towns, while the rural population is in 229 incorporated places of less than 2,500 inhabitants each and in the unincorporated territory. The 229 places of less than 2,500 inhabitants each have an aggregate population of 256,305, representing 6.6 per cent of the total population of the state. These places comprise 123 having from 1,000 to 2,500 inhabitants each, with a combined population of 189,500; 77 having from 500 to 1,000 inhabitants each, with a combined population of 56,475; and 29 having

less than 500 inhabitants each, with a combined population of 10,330. The population living in unincorporated territory represents 69.3 per cent of the total.

The above table shows further that in all incorporated places, including those of less than 2,500 inhabitants, there was in 1910 a population of 1,194,409, or 30.7 per cent of the population of the state. The population of all incorporated places, as they existed in 1900, was 680,967, or 22.3 per cent of the population of the state.

Table I of Chapter 2 shows that 39 counties had a larger proportion and 11 counties a smaller proportion of urban population in 1910 than in 1900. Thirty-two counties and one combination of counties, which were wholly rural in 1900, were partly urban in 1910, while 159 counties and one combination of counties were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table on page 571, the total population in 1910 of those places which at that time had 2,500 inhabitants or more was 938,104; in 1900 the total population of these same places (so far as separately reported) was 559,872. It may be noted that the latter figure exceeds the total population in 1900 of those places which at that time had over 2,500 inhabitants each, 520,759 (see table above) by 39,113. The difference is the net result of the passage, since 1900, of certain communities from the rural to the urban class and vice versa.

A comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table in the next column, shows an increase of 67.6 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased 18.9 per cent. The population of urban areas thus increased more than three and one-half times as fast as rural. For the United States as a whole urban population increased 34.9 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2, there are 42 counties in Texas in which rural population decreased and 11 counties in which there was a decrease in the urban population during the last decade, there being 6 counties that decreased in population in both rural and urban districts.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the combined population of the places having in

1910 over 25,000, and from 2,500 to 25,000 inhabitants, respectively, and the population of the remainder of the state.

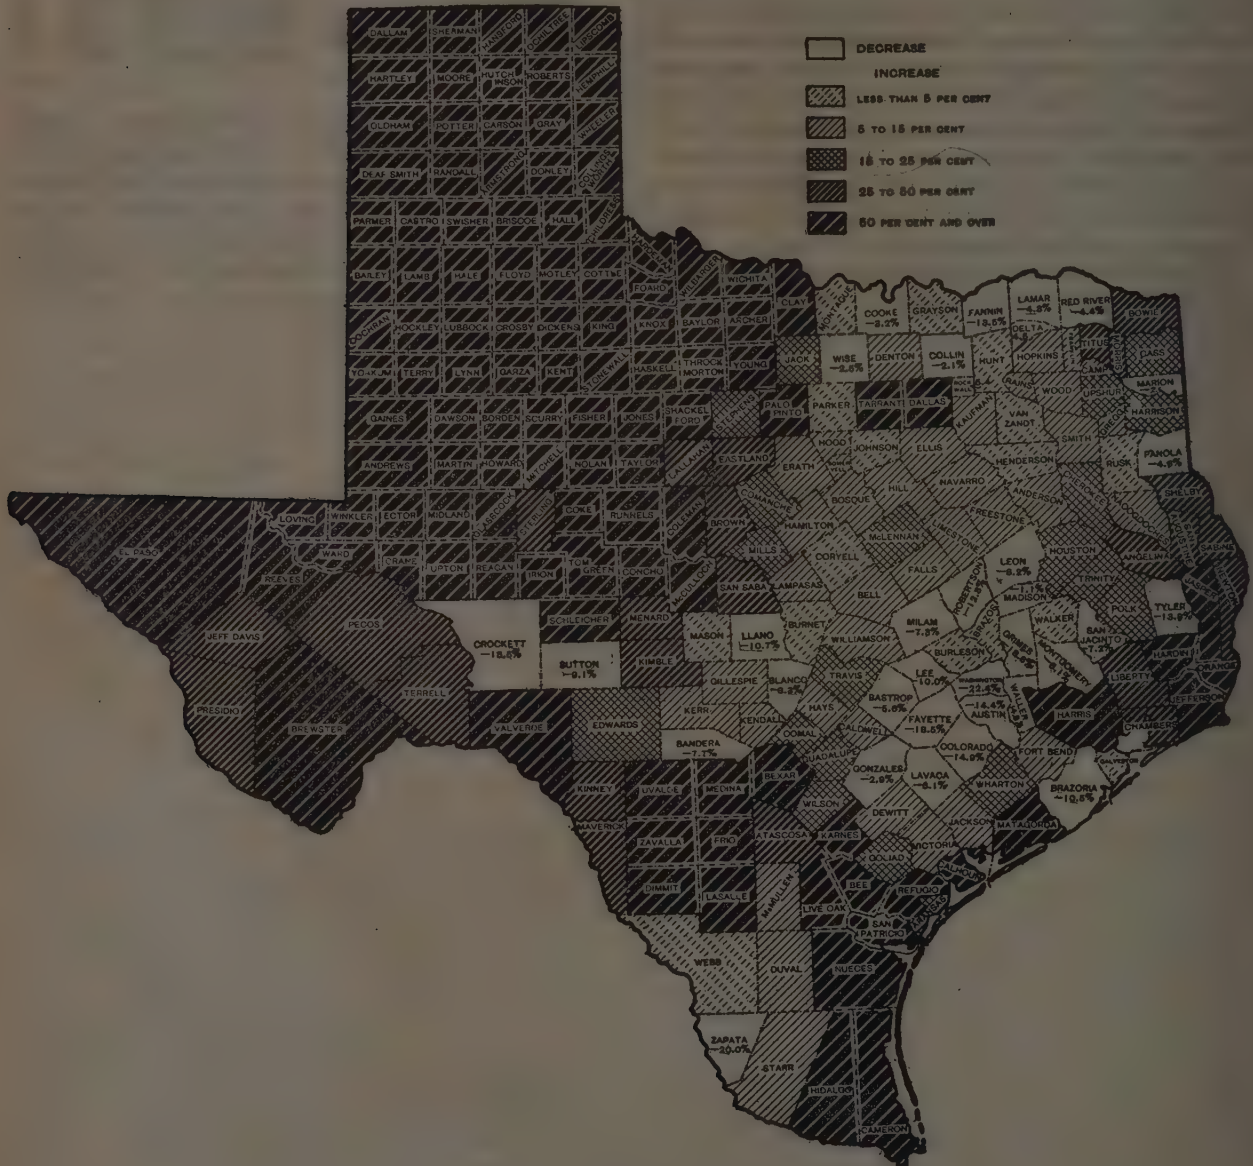

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	3,896,542	3,049,710	847,832	27.8
Urban territory in 1910.....	938,104	559,872	378,232	67.6
Cities and towns of 25,000 or more in 1910.....	473,375	267,549	205,826	78.9
Cities and towns of 2,500 to 25,000 in 1910.....	464,729	292,323	172,406	59.0
Remainder of the state.....	2,958,438	2,488,838	469,600	18.9

From this table it appears that the group of urban places having over 25,000 inhabitants increased in population during the last decade more than two and three-fourths times as rapidly as the state as a whole, and the group of places having from 2,500 to 25,000 inhabitants more than twice as rapidly. The rate of increase for rural territory was only about two-thirds that for the state as a whole.

<sup>1</sup> County total includes population (137) of precinct 5, annexed to precinct 4 between 1890 and 1900.

<sup>2</sup> Not returned separately in 1890.

<sup>3</sup> Part of precinct 7 annexed to precinct 2 in 1909.

<sup>4</sup> Unorganized in 1890.

<sup>5</sup> Incorporated in 1910.

<sup>6</sup> Unorganized; not divided into precincts.

<sup>7</sup> No comparison of population can be made; not returned by precincts in 1900.

<sup>8</sup> No comparison of population can be made; not returned by precincts in 1890.

<sup>9</sup> Incorporated in 1904.

<sup>10</sup> Parts annexed to Dallas city in 1902, 1903, 1904, 1905, 1907, 1908, 1909, and 1910.

<sup>11</sup> Part of precinct 7 (Oak Cliff town) annexed in 1903 and parts of precinct 1 annexed in 1902, 1903, 1904, 1905, 1907, 1908, 1909, and 1910.

<sup>12</sup> Incorporated as a city in 1909.

<sup>13</sup> Part annexed to Dallas city in 1903.

<sup>14</sup> Incorporated as a city in 1908.

<sup>15</sup> Incorporated in 1909.

<sup>16</sup> Organized from unorganized county of Dawson in 1905.

<sup>17</sup> No comparison of population can be made; county redistricted in 1903.

<sup>18</sup> Incorporated in 1906.

<sup>19</sup> County totals include population (1,202 in 1900; 1,047 in 1890) of old precinct 7, annexed to precinct 8 since 1900.

<sup>20</sup> Part taken to form part of new precinct 7 in 1908.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890—Continued.

<sup>1</sup> County total includes population (735) of precinct 7, annexed to precinct 4; and population (900) of precinct 8, annexed to precinct 5, since 1900.

<sup>2</sup> Precinct 7 annexed in 1909.

<sup>3</sup> Precinct 8 annexed in 1909.

<sup>4</sup> No comparison of population can be made; not returned by justices' precincts in 1890.

<sup>5</sup> Precinct 6 organized from part of precinct 2 in 1905.

<sup>6</sup> Precinct 7 organized from part of precinct 4 in 1907.

<sup>7</sup> Incorporated in 1907.

<sup>8</sup> Precinct 8 organized from part of precinct 4 in 1909.

<sup>9</sup> Incorporated in 1910.

<sup>10</sup> No comparison of population can be made; not returned by precincts in 1900 and 1890.

<sup>11</sup> Precinct 5 organized from parts of precincts 1 and 2 in 1903.

<sup>12</sup> Organized from unorganized county of Parmer in 1907.

<sup>13</sup> Part taken to form Terrell County in 1905.

<sup>14</sup> No comparison of population can be made; county redistricted in 1905.

<sup>15</sup> County total includes population (3,881) of precincts 3, 6, and 7, not returned separately in 1890.

<sup>16</sup> No comparison of population can be made; not returned by precincts in 1890.

<sup>17</sup> Incorporated in 1906.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890—Continued.

[Precinct, except as otherwise stated, means justice precinct. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

<sup>1</sup> Joint population of Texarkana city, Miller County, Ark., and Texarkana city, Bowie County, Tex.: 1910, 15,445; 1900, 10,170; 1890, 6,380.

## CHAPTER 2.

### COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

**Introduction.**—The first chapter having given the number of inhabitants of Texas by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

**Description of the tables.**—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of cities of more than 50,000.

A series of summary tables (numbered 1 to 15) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

**Color and nativity** (Table 1).—Of the total population of Texas, 3,204,848, or 82.2 per cent, are whites, and 690,049, or 17.7 per cent, negroes. The corresponding percentages in 1900 were 79.6 and 20.4, respectively. Twenty-eight of the 245 counties report no negroes; in 137 other counties the percentage of negroes is less than 12.5; in 30 it is between 12.5 and 25; in 42, between 25 and 50, and in 8 the proportion exceeds one-half. (See map on page 659.)

Native whites of native parentage constitute 66.8 per cent of the total population of the state, and 81.2 per cent of the white population. Native whites of foreign or mixed parentage constitute only 9.3 per cent of the total population, and foreign-born whites only 6.2 per cent.

Of the urban population, 59.5 per cent are native whites of native parentage; of the rural, 69.1 per cent. The corresponding proportions for native whites of foreign or mixed parentage, are 12.2 and 8.4 per cent, respectively. The percentage of foreign-born whites is 9.2 in the urban population and 5.2 in the rural; the percentage of negroes is 19.1 in the urban and 17.3 in the rural.

**Sex** (Tables 2 and 12).—In the total population of the state there are 2,017,626 males and 1,878,916 females, or 107.4 males to 100 females, the ratio being the same in 1910 as it was in 1900. Among the whites there are 109 males to 100 females; among the negroes the population is about equally divided between the sexes. Among native whites the ratio is 107.3 to 100, as compared with 132.6 to 100 for the foreign-born whites. In the urban population there are 101.7 males to 100 females, and in the rural, 109.3.

**State of birth** (Tables 3 and 4).—Of the total native population—that is, population born in the United States—74.7 per cent were born in Texas and 25.3 per cent outside the state; of the native white population, 28.2 per cent were born outside the state, and of the native negro, 12.5 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

**Foreign nationalities (Table 5).**—Of the foreign-born white population of Texas, persons born in Mexico represent 51.8 per cent; Germany, 18.7; Austria, 8.6; England, 3.5; Italy, 3; Russia, 2.4; Ireland, 2.2; Sweden, 2; all other countries, 7.7 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Mexico contributed 38.7 per cent; Germany, 28.5; Austria, 8.8; England, 4.4; Ireland, 3.8; Italy, 2.3; Sweden, 1.9; Russia, 1.8; Canada, 1.6 per cent.

**Voting and militia ages (Table 6).**—The total number of males 21 years of age and over is 1,003,357, representing 25.7 per cent of the population. Of such males, 83.3 per cent are whites and 16.6 per cent negroes. Native whites represent 72.1 per cent of the total number and foreign-born whites 11.2 per cent. Of the 112,152 foreign-born white males of voting age, 43,381, or 38.7 per cent, are naturalized. Males of militia age—18 to 44—number 804,980.

**Age (Tables 7, 8, and 13).**—Of the total population, 13.8 per cent are under 5 years of age, 24.8 per cent from 5 to 14, inclusive, 20.9 per cent from 15 to 24, 25.9 per cent from 25 to 44, and 14.4 per cent 45 and over. The foreign-born white population comprises comparatively few children, only 11.5 per cent of this class being under 15, while 72.4 per cent are 25 years of age and over. Of the native whites of native parentage and of the negroes, only 38.6 per cent are 25 and over. The negro population comprises a somewhat smaller proportion of children under 5 than the native white population of native parentage.

The urban population shows a smaller proportion of children than the rural, and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 32.7 per cent are from 25 to 44 years of age, inclusive, and of the rural, 23.7 per cent.

**School attendance (Table 9).**—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 1,363,713, of whom 790,736, or 58 per cent, attended school. In addition to these, 6,740 children under 6 and 12,601 persons 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 57.7; for girls, 58.3. For children from 6 to 14 years, inclusive, the percentage attending school was 70.2. The percentage for children of this age among native whites of native parentage was 74.3; among native whites of foreign or mixed parentage, 60.3; among foreign-born whites, 38.4; among negroes, 64.5. (See Table I.) In urban communities the percentage of children of that age attending school was 74.3, and in rural, 69.2.

**Illiteracy (Table 10).**—There are 282,904 illiterates in the state, representing 9.9 per cent of the total population 10 years of age and over, as compared with 14.5 per cent in 1900. The percentage of illiteracy is 30 among foreign-born whites, 24.6 among negroes, and 4.3 among native whites. It is 3.3 for native whites of native parentage, and 11.6 for native whites of foreign or mixed parentage.

For all classes combined, the percentage of illiterates is 7.1 in the urban population and 10.9 in the rural. For each class separately, also, the percentage of illiterates in the rural population greatly exceeds that in the urban.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 6.7. (See Table I.)

**Marital condition (Tables 11 and 14).**—In the population 15 years of age and over, 37.2 per cent of the males are single and 26 per cent of the females. The percentage married is 57.2 for males and 62.7 for females; and the percentage widowed 4.6 and 10.2, respectively. The percentages of those reported as divorced, 0.5 and 0.8, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 17.9 per cent of the females from 15 to 19 years of age are married, as compared with 1.9 per cent of the males, and 61 per cent of the females from 20 to 24 years are married, as compared with 31.6 per cent of the males. In the next age group, 25 to 34 years, the difference in the percentages is less marked; and in the age group 35 to 44 it is very slight, while among those 45 and over the percentage married is higher for the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 62.8 for males, 67.5 for females; native whites of native parentage, 57.5 and 64.2, respectively; native whites of foreign or mixed parentage, 49.3 and 57.1; negroes, 57 and 57.8.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married, both for males and for females, is higher in rural than in urban communities.

**Dwellings and families.**—The total number of dwellings in Texas is 779,177, and the total number of families 798,426, indicating that in comparatively few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 5, and the average number per family, 4.9.

## NOTES REGARDING CHANGES IN BOUNDARIES, ETC.

## COUNTIES.

ANDREWS—Organized from unorganized county of Andrews in 1910.  
 ARANSAS—Organized from part of Refugio in 1871.  
 AUSTIN—Part taken to form part of Waller in 1873.  
 BASTROP—Part taken to form part of Lee in 1874.  
 BREWSTER—Organized from part of Presidio in 1887 and Buchel and Foley annexed in 1897.  
 BROWN—Part taken to form part of Mills in 1887.  
 BURLESON—Part taken to form part of Lee in 1874.  
 CAMP—Organized from part of Upshur in 1874.  
 CASS—Name changed from Davis in 1871.  
 COKE—Organized from part of Tom Green in 1889.  
 COMANCHE—Part taken to form part of Mills in 1887.  
 CRANE—Formed from part of Tom Green in 1887.  
 CROCKETT—Parts taken to form Schleicher and Sutton in 1887 and part of Val Verde in 1885.  
 DAWSON—Organized from unorganized county of Dawson in 1905.  
 DELTA—Organized from parts of Hopkins and Lamar in 1870.  
 DUVAL—Organized from part of Nueces in 1876.  
 ECTOR—Formed from part of Tom Green in 1887.  
 FAYETTE—Part taken to form part of Lee in 1874.  
 FOARD—Organized from parts of Hardeman and Knox in 1891.  
 FRANKLIN—Organized from part of Titus in 1875.  
 GAINES—Organized from unorganized county of Gaines in 1905.  
 GARZA—Organized from unorganized county of Garza in 1907.  
 GLASSCOCK—Formed from part of Tom Green in 1887.  
 GRAY—Organized from unorganized county of Gray in 1902.  
 GREGG—Organized from part of Upshur in 1873 and part of Rusk annexed in 1874.  
 GRIMES—Part taken to form part of Waller in 1873.  
 HAMILTON—Part taken to form part of Mills in 1887.  
 HARDEMAN—Part taken to form part of Foard in 1891.  
 HOOD—Part taken to form Somervell in 1875.  
 HOPKINS—Parts taken to form parts of Delta and Rains in 1870.  
 HUNT—Part taken to form part of Rains in 1870.  
 HUTCHINSON—Organized from unorganized county of Hutchinson in 1901.  
 IRION—Organized from part of Tom Green in 1889.  
 JEFF DAVIS—Organized from part of Presidio in 1887.  
 KAUFMAN—Part taken to form Rockwall in 1873.  
 KINNEY—Part taken to form part of Val Verde in 1885.  
 KNOX—Part taken to form part of Foard in 1891.  
 LAMAR—Part taken to form part of Delta in 1870.  
 LAMB—Organized from unorganized county of Lamb in 1908.  
 LAMPASAS—Part taken to form part of Mills in 1887.  
 LEE—Organized from parts of Bastrop, Burleson, Fayette, and Washington in 1874.  
 LIBERTY—Part taken to form part of San Jacinto in 1870.  
 LOVING—Formed from part of Tom Green in 1887.  
 LYNN—Organized from unorganized county of Lynn in 1903.  
 MIDLAND—Organized from part of Tom Green in 1885.  
 MILLS—Organized from parts of Brown, Comanche, Hamilton, and Lampasas in 1887.  
 MONTGOMERY—Part taken to form part of San Jacinto in 1870.  
 MORRIS—Organized from part of Titus in 1875.  
 NUECES—Part taken to form Duval in 1876.  
 FARMER—Organized from unorganized county of Farmer in 1907.  
 PECOS—Organized from part of Presidio in 1871; parts taken to form Reeves and Terrell in 1883 and 1905, respectively; part taken to form part of Val Verde in 1885. (See also Note 1.)  
 POLK—Part taken to form part of San Jacinto in 1870.  
 PRESIDIO—Parts taken to form Pecos in 1871 and Brewster, Buchel, Foley, and Jeff Davis in 1887.  
 RAINS—Organized from parts of Hopkins, Hunt, Van Zandt, and Wood in 1870.  
 REAGAN—Organized from part of Tom Green in 1903. (See also Note 2.)  
 REEVES—Organized from part of Pecos in 1883.

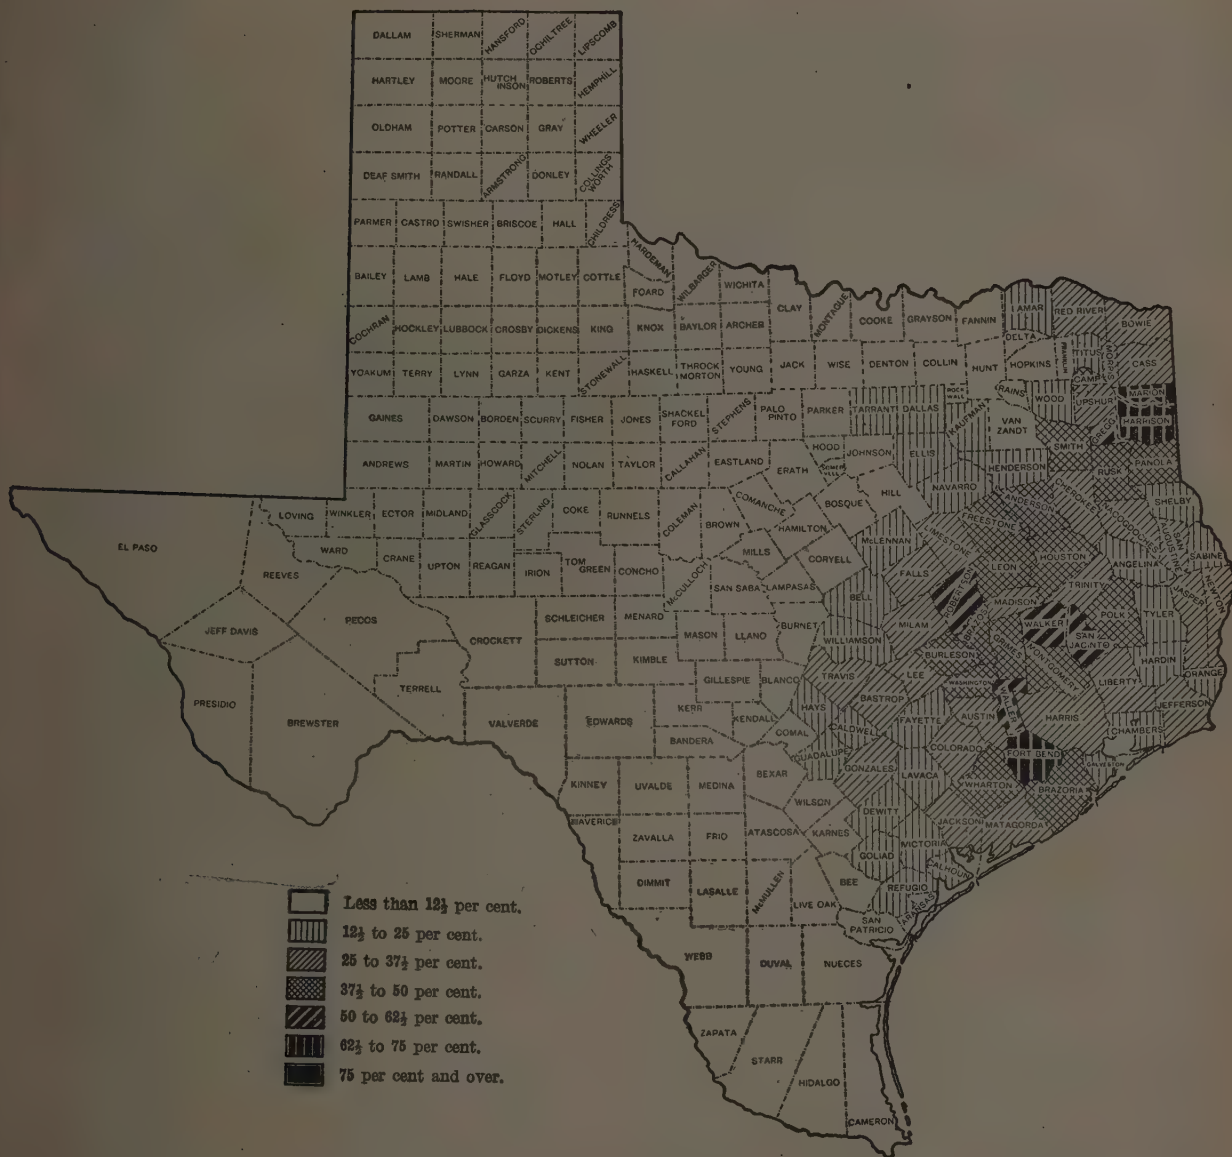

REFUGIO—Part taken to form Aransas in 1871.  
 ROCKWALL—Organized from part of Kaufman in 1873.  
 RUSK—Part annexed to Gregg in 1874.  
 SAN JACINTO—Organized from parts of Liberty, Montgomery, Polk, and Walker in 1870.  
 SCHLEICHER—Formed from part of Crockett in 1887; organized from unorganized county of Schleicher in 1901.  
 SOMERVELL—Organized from part of Hood in 1875.  
 STERLING—Organized from part of Tom Green in 1891.  
 SUTTON—Formed from part of Crockett in 1887.  
 TERRELL—Organized from part of Pecos in 1905. (See also Note 1.)  
 TERRY—Organized from unorganized county of Terry in 1904.  
 TITUS—Parts taken to form Franklin and Morris in 1875.  
 TOM GREEN—Parts taken to form Midland in 1885; Crane, Ector, Glasscock, Loving, Upton, Ward, and Winkler in 1887; Coke and Irion in 1889; Sterling in 1891; and Reagan in 1903. (See also Note 2.)  
 UPSHUR—Parts taken to form Gregg in 1873 and Camp in 1874.  
 UPTON—Formed from part of Tom Green in 1887; organized from unorganized county of Upton in 1910.  
 VAL VERDE—Organized from parts of Crockett, Kinney, and Pecos in 1885.  
 VAN ZANDT—Part taken to form part of Rains in 1870.  
 WALKER—Part taken to form part of San Jacinto in 1870.  
 WALLER—Organized from parts of Austin and Grimes in 1873.  
 WARD—Formed from part of Tom Green in 1887.  
 WASHINGTON—Part taken to form part of Lee in 1874.  
 WEBB—Encinal annexed in 1899.  
 WINKLER—Formed from part of Tom Green in 1887; organized from unorganized county of Winkler in 1910.  
 WOOD—Part taken to form part of Rains in 1870.  
 YOAKUM—Organized from unorganized county of Yoakum in 1909.  
 ZAPATA—Part annexed to Encinal in 1870.  
 NOTE 1.—Pecos and Terrell Counties combined.—Total population: 1910, 3,501; 1900, 2,360; increase, 1900-1910, 1,141; per cent of increase, 48.3. Rural population—1910, 3,501; same territory in 1900, 2,360; per cent of increase, 48.3. Rural population—1900, 2,360.  
 NOTE 2.—Reagan and Tom Green Counties combined.—Total population: 1910, 18,274; 1900, 6,804; increase, 1900-1910, 11,470; per cent of increase, 168.6. Urban population—1910, 10,321. Rural population—1910, 7,953; same territory in 1900, 6,801; per cent of increase, 16.9. Rural population—1900, 6,804. Per cent in places of 2,500 or more in 1910, 56.5.

## INCORPORATED PLACES.

AUSTIN—Part annexed to precinct 3 in 1901; part of precinct 3 annexed in 1909.  
 BAY CITY—Incorporated in 1902.  
 BEAUMONT—Part of precinct 1 annexed in 1909.  
 BEEVILLE—Incorporated in 1908.  
 BIG SPRING—Incorporated in 1907.  
 BRADY—Incorporated in 1906.  
 CORSCANA—Parts of precinct 1 annexed in 1903, 1907, and 1908.  
 DALHART—Incorporated in 1904.  
 DALLAS—Part of precinct 7 (Oak Cliff town) annexed in 1903 and parts of precinct 1 annexed in 1902, 1903, 1904, 1905, 1907, 1908, 1909, and 1910.  
 DENISON—Part of precinct 2 annexed in 1908.  
 EAGLE PASS—Incorporated in 1909.  
 EL PASO—Part of precinct 1 annexed in 1907.  
 FORT WORTH—Part of precinct 1 annexed in 1909.  
 HOUSTON—Part of precinct 1 annexed in 1903.  
 LONGVIEW—Part of precinct 1 annexed in 1904.  
 MART—Incorporated in 1902.  
 MOUNT PLEASANT—Incorporated in 1900.  
 PLAINVIEW—Incorporated in 1907.  
 SAN ANGELO—Incorporated in 1903.  
 SHERMAN—Part of precinct 1 annexed in 1909.  
 SNYDER—Incorporated in 1907.  
 STAMFORD—Incorporated in 1901.  
 TEAGUE—Incorporated in 1907.  
 WACO—Part of precinct 1 annexed in 1909.

PER CENT OF NEGROES IN TOTAL POPULATION OF TEXAS, BY COUNTIES: 1910.

## CHAPTER 3.

### STATISTICS OF AGRICULTURE FOR THE STATE AND ITS COUNTIES.

**Introduction.**—This chapter presents a complete statement of the statistics of agriculture for Texas collected at the census of 1910. Statistics of farms and farm property relate to April 15, 1910; those of farm products, expenses, and receipts are for the calendar year 1909.

**Definitions.**—To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

**Farm.**—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term referring to the work of growing crops, producing other agricultural products, and raising animals, fowls, and bees. A "farm" as thus defined may consist of a single tract of land, or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. Further, when a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1909.

**Farmer.**—A "farmer" or "farm operator," according to the census definition, is a person who directs the operations of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, tenants, and managers.

**Farm owners** include (1) farmers operating their own land only, and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "owners" being then restricted to those owning all their land.

**Farm tenants** are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1910 in three classes: (1) *Share tenants*—those who pay a certain share of the products, as one-half, one-third, or one-quarter; (2) *share-cash tenants*—those who pay a share of the products for part of the land rented by them and cash for part; and (3) *cash tenants*—those who pay a cash rental or a stated amount of labor or products, such as \$7, 10 bushels of wheat, or 100 pounds of seed cotton per acre.

**Managers** are farmers who are conducting farm operations for the owner for wages or a salary.

**Farm land.**—Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. The same classification was followed in 1880. At former censuses, except that of 1880, farm land was divided into improved land and unimproved land, woodland being included with unimproved land. *Improved*

*land* includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics therefore must be considered at best only a close approximation.

**Total value of farm products.**—No attempt has been made at this census to compute or even to estimate approximately the total value of farm products. Among the numerous difficulties which stand in the way of obtaining a total which would be at once comprehensive, free from duplication, and confined exclusively to the products of a definite period of time are the following:

(1) The duplication resulting from the feeding of farm crops to farm live stock, when the value both of the products derived from such live stock and of the crops are included in the same total. In 1900 an attempt was made to eliminate this duplication by means of an inquiry as to the total value of the products of each farm fed to the live stock on that farm, but, aside from the fact that this would not eliminate the duplication where the products of one farm are fed to the live stock of another farm, it is believed that the farmers were unable to make even approximately accurate answers to the inquiry, and it was accordingly not included in the schedule for 1910.

(2) The fact that farmers may buy domestic animals during the census year which are subsequently sold or slaughtered during the same year, and that it is impossible to eliminate the duplication accurately; and the further fact that the value of domestic animals sold or slaughtered, or of forest products cut, during a given year (as well as some other minor items) does not usually represent a value created wholly during that year, and that it is quite impossible to ascertain the value created during the year.

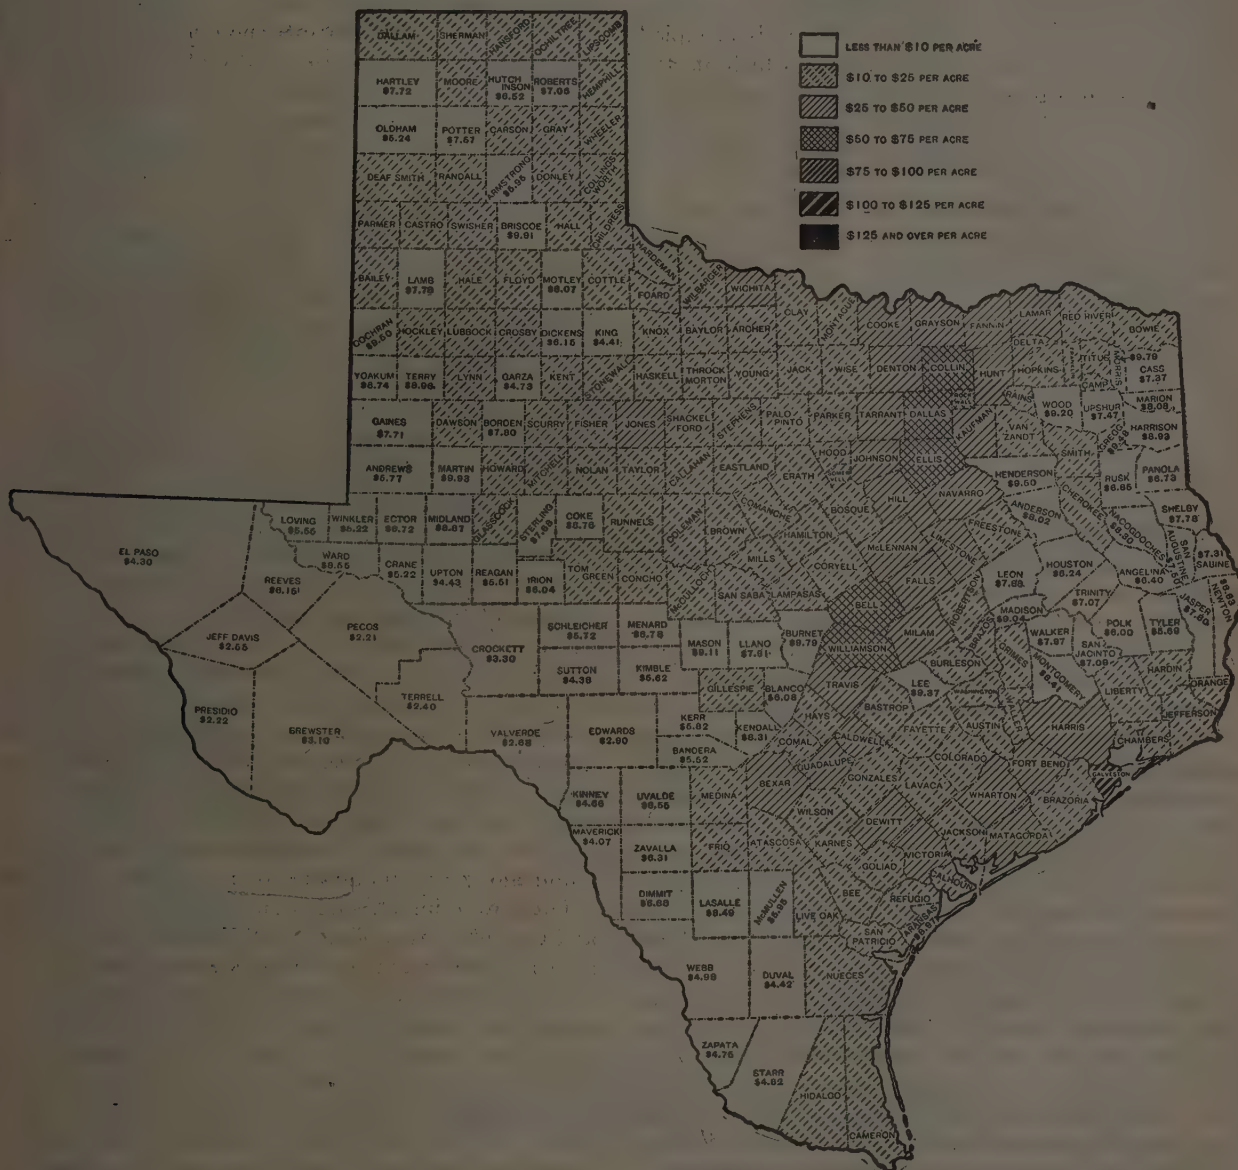

(3) The fact that the returns for some products are incomplete. The returns for all products are to a considerable extent estimates made by the farmers. Special difficulty was encountered in cases where the person in possession of the farm in April, 1910, when the census was taken, was not in possession of it during the crop year 1909. In such cases the farmer was not always able to report completely and accurately the products of the land for the preceding year. It is probable that the returns for the principal crops are in general fairly accurate, but that those for minor crops and for dairy and poultry products are frequently understatements, particularly because the home consumption was disregarded or underestimated. In the belief that no accurate result could be obtained from such an inquiry, the Bureau of the Census did not even attempt to ascertain the total quantity and value of certain by-products, such as straw and cornstalks, which are of considerable importance, the schedule calling only for the value of such by-products sold.

[Per cent for the state, 67.]

[Average for the state, \$14.53.]

	\$100 TO \$125 PER ACRE
	\$125 AND OVER PER ACRE

## FARMS AND FARM PROPERTY.

Texas ranks first in land area and fifth in population among the states and territories of continental United States. The state rises from sea level along its southeastern coast line to altitudes in excess of 6,000 feet among the ranges which cross the extreme western or trans-Pecos region. In general the surface slopes gently upward from the Gulf coast inland to the central portion of the state. Central Texas is occupied by high plateaus and rolling prairies which in the western and northwestern portions of the state merge into the high plains section of the Panhandle and into the mountain and basin topography of the trans-Pecos region.

Immediately back from the coast line there extends a broad belt, known as the coast prairies, which reaches from the Sabine River to the Rio Grande and varies in width from 30 to 100 miles. Practically all of this stretch of country is nearly level, its inner margin scarcely rising to an altitude of 100 feet above the sea. Northeastern Texas, immediately inland from this coastal belt, consists of a rolling Coastal Plains section stretching from the Louisiana border to the vicinity of San Antonio. It is known as the east Texas timbered region. Its highest elevations rise to 500 and 600 feet above sea level. Lying along the Rio Grande, immediately west of the coastal prairie belt in southwestern Texas, is a broad tract which is known as the Rio Grande Embayment. It rises from the Rio Grande River in the form of rolling prairies to altitudes of 1,000 feet. The divisions are separated from the plateau section of central Texas by the broad belt of the Black and Grand prairies, which have their greatest breadth along the Red River, and extend southward in a narrowing belt just past San Antonio. The altitudes within this Cretaceous prairie section range from 450 feet to approximately 1,000 feet above sea level. In the northern portion of this prairie section a narrow timber belt known as the eastern cross timbers extends southward from the Red River, separating the Black Prairie from the Fort Worth Prairie. In this region also the Cretaceous prairies are bounded on the west by what is known as the western cross timbers. North central Texas consists of an elevated plateau much dissected by the larger streams and rising from an altitude of approximately 1,000 feet along its eastern boundary to altitudes in excess of 2,000 feet, where it merges into the high plains of the Panhandle section. The southern portion of this plateau region consists of the deeply dissected Lampasas cut plain and the central mineral region. The northern portion of the Panhandle and practically all of the western part of Texas lie within the high plains region at an altitude ranging from 2,000 to 5,000 feet above

sea level. These high rolling plains are deeply cut by rivers which flow across them in gorges and "breaks," between which are broad stretches of rolling to nearly level plateau country. The high plains in the southwestern portion of the state are broken by the eastern Cordilleran Ranges which enter the state in the extreme western portion. Between these ranges there are numerous extensive intermountain basins, lying at altitudes from 2,000 to 4,000 feet above sea level, which constitute a continuance of the high plains southwest to the Rio Grande River. The southern portion of the high plains region is subdivided into the Edwards Plateau, east of the Pecos River, and the Stockton Plateau, west of it.

The surface features of the state of Texas thus possess a great diversity, ranging from a low coastal plains section through more elevated and rolling timber country and Cretaceous prairies to the plateau and high plains region of central and western Texas and to the mountain and basin region of the trans-Pecos country.

The soils of the coastal prairie are prevalently gray silty and fine sandy loams in the vicinity of the Sabine River. These gradually merge into brown and black sandy loam and loam soils which stretch from the vicinity of Houston and Galveston nearly to the Rio Grande. This region is also crossed by the alluvial bottoms of the principal Texas rivers whose soils consist of red and brown sandy loams or of black, sticky clays. The soils of the eastern Texas timbered region are gray sands, sandy loams, loam and clay soils of considerable variety which are usually rolling and well drained. The Cretaceous prairies of central Texas constitute the richest agricultural soils of large extent within the state. The prevailing soil is a black, waxy clay, although areas of loam and sandy loam are also found along the boundaries of the region. The soils of both cross timber belts are prevalently stony, sandy, and gravelly, resembling closely the soils found at the higher elevations in the rolling Coastal Plain.

The residual prairie region of Texas is occupied by sandstones, shale, and limestone rocks which give rise to a wide variety of soils. In the north central portion of the state the Permian red beds give rise to sandy and fine sandy loam soils of a red or brown color. In the cut plains region extensive areas of limestone give rise to brown loam and clay loam soils somewhat resembling those of the Cretaceous prairies.

Within the high plains region the soils are derived from calcareous, Tertiary, and Quaternary deposits. The soils are prevalently brown to reddish brown and include gravelly loams, sands, sandy loams, and silty clay loams, which are extensively developed in this

region. The greater portion of the Rio Grande Embayment has alluvial soils, chiefly silty loams and silty clays.

The average altitude of the state of Texas above sea level is estimated at approximately 1,700 feet, the western portion of the state lying above this altitude and the eastern portion uniformly below it.

Over the greater part of the state the rainfall is sufficient to insure successful grain crops without irrigation, and the normal annual precipitation ranges all the way from about 50 inches along the eastern boundary to about 10 inches in the western counties. Irrigation is practiced extensively, however, in the rice growing counties on and near the Gulf of Mexico, and in localities in the valleys of the Rio Grande and Pecos Rivers where the annual precipitation is light. In the remainder of the state irrigation is limited to gardens and special crops of small acreage.

The two maps on the preceding pages show, for the different counties, the proportion of the total land area in farms and the average value of farm land per acre. Of the state's entire land area about two-thirds (67 per cent) is in farms. The percentage varies widely in the different counties, but the most common proportion is from 60 to 80 per cent, the proportion in 68 counties falling between these figures. Seventy-nine counties have less than 60 per cent of their land in farms. Most of these are on or near the boundaries of the state, particularly in the southeastern part.

A higher proportion of land in farms of from 80 to 90 per cent is found in 56 counties, located mainly in the north central part of the state. Scattered over the state there are as many as 42 counties which have more than 90 per cent of their land in farms; in 21 of these the proportion is from 90 to 95 per cent, and in an equal number 95 per cent and over.

For the state as a whole, the average value of farm land per acre is \$14.53. In nearly half of the counties (119) the average is between \$10 and \$25. Ninety-one counties show an average value of less than \$10 per acre. The greater number of these are in the western and southwestern parts of the state, but a few are in the extreme eastern part. Higher average values of farm land, ranging between \$25 and \$50, are found in 28 counties, nearly all of which are located in the eastern part of the state. Twenty of these lie in whole or in part in the belt of the Black and Grand Prairies before mentioned, where there are also six counties with average values between \$50 and \$75 per acre. In Galveston County, in the southeastern part of the state, in which the city of Galveston is located, the average value of farm land exceeds \$75 per acre.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE, <sup>1</sup>	
			Amount.	Per cent.
Population.....	3,896,542	3,048,710	847,832	27.8
Number of all farms.....	417,770	352,190	65,580	18.6
Approximate land area of the state.....acres..	167,934,720	167,934,720		
Land in farms.....acres..	112,435,067	125,807,017	-13,371,950	-10.6
Improved land in farms.....acres..	27,360,666	19,576,076	7,784,590	39.8
Average acres per farm.....	269.1	357.2	-88.1	-24.7
Value of farm property:

Average value of all property per farm.....	\$5.311	\$2.733	\$2.578	94.3
Average value of land per acre.....	\$14.53	\$4.70	\$9.83	209.1

<sup>1</sup> A minus sign (—) denotes decrease.

NOTE.—Ranges or ranches using the public domain for grazing purposes, but not owning or leasing land, were counted as farms in 1910 and 1900. They were included as owned or managed, free from mortgage, and under 3 acres in size. The counting of these ranges as farms affects all totals, averages, and percentages in which the number of farms is a factor. In 1910 there were 87 such ranges included as farms.

Between 1900 and 1910 there was an increase of 18.6 per cent in the number of farms in Texas, as compared with an increase of 27.8 per cent in the population. During the decade the total reported farm acreage decreased 10.6 per cent, while the acreage reported as improved increased 39.8 per cent. The increase in the number of farms and the decrease in farm acreage resulted in a lower average size of farms, which was 269.1 acres in 1910, as compared with 357.2 acres in 1900.

The total value of farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), is \$2,218,645,000, representing an increase of 130.5 per cent since 1900. Land alone increased in value 176.1 per cent, as compared with an increase of 109.5 per cent in the value of buildings, of 88.5 per cent in that of implements and machinery, and of 32.5 per cent in that of live stock. In considering the increase of values in agriculture the general increase in the prices

of commodities in the last 10 years should be borne in mind.

The average value of a farm, including its equipment, is \$5,311, an increase of 94.3 per cent since 1900. During the decade the average value of land per acre increased from \$4.70 to \$14.53, or more than trebled.

**Irrigation.**—Of the 417,770 farms in the state, 5,238, or 1.3 per cent, were reported as irrigated in 1909. The acreage reported as irrigated in 1909 was 451,130 acres, or 1.6 per cent of the improved land in farms. Of this acreage, 286,847 acres, or 63.6 per cent of the total irrigated area, was in the rice growing counties. The area to which enterprises existing in 1910 were capable of supplying water was 690,991 acres, and the total acreage included in irrigation projects, completed or under way in 1910, was 1,253,173 acres.

**Population, number of farms, and farm acreage: 1850 to 1910.**—The table following presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

CEN- SUS YEAR.	Popula- tion.	FARMS.		LAND IN FARMS.			Per cent of land area in farms.	Per cent of farm land im- prov- ed.
		Num- ber.	Per cent of in- crease.	All land.		Improved land (acres).		
				Acres.	Per cent of in- crease. <sup>1</sup>			
1910...	3,896,542	417,770	18.6	112,435,067	-10.6	27,360,666	67.0	24.3
1900...	3,048,710	352,190	54.4	125,807,017	144.7	19,576,076	74.9	15.6
1890...	2,235,527	228,126	31.0	51,406,937	41.6	20,748,215	30.6	40.4
1880...	1,591,749	174,184	185.0	36,292,219	97.3	12,650,314	21.6	34.9
1870...	818,579	61,125	42.5	18,396,523	-27.4	2,964,836	11.0	16.1
1860...	604,215	42,891	251.6	25,344,028	129.5	2,650,781	15.1	10.5
1850...	212,592	12,198		11,496,339		643,976	6.8	5.6

1 A minus sign (-) denotes decrease.

During the 60 years covered by the table the population of the state has increased continuously and quite regularly from 212,592 in 1850 to 3,896,542 in 1910. There has been an uninterrupted increase in the number of farms reported, the number increasing from 12,198 in 1850 to 417,770 in 1910, or at a rate averaging 6,760 per year. Between 1890 and 1900 the average rate of increase was 12,406 per year, while during the last decade the number increased at the rate of 6,558 per year.

The land surface of Texas is approximately 167,934,720 acres, of which area 112,435,067 acres, or 67 per cent, are occupied by farms. During the last decade the total amount of land in farms decreased 13,371,950 acres, or 10.6 per cent. This falling off is attributable in a very large measure to changes which

have been taking place in the western section of the state, where in 1900 most of the land was held in large tracts used for grazing purposes. During the last 10 years much of this land has been bought by speculators for sale in small farms, and at the time of the census enumeration a considerable quantity of such land was either in the hands of these speculators or of purchasers who had not yet begun its cultivation. During the decade there was in fact a decrease of about 25,000,000 acres of farm land in this section of the state, this reduction being offset in part by an increase of farm land in the other sections.

The reported acreage of improved farm land increased 7,784,590 acres, or 39.8 per cent. Thus the proportion of land improved is higher at the census of 1910 than in 1900, being 24.3 per cent, as compared with 15.6 per cent in 1900.

In 1850 the total amount of land in farms was 11,496,339 acres, or 6.8 per cent of the land area. The total farm acreage increased during the next 10 years, but decreased during the decade 1860-1870, occupying in 1860 15.1 per cent of the land area, and in 1870 only 11 per cent. During the next 20 years the farm acreage nearly trebled and constituted, in 1890, 30.6 per cent of the land area, but this proportion had risen in 1900 to 74.9 per cent. Thus the amount of land reported in farms was about two and one-half times as large in 1900 as in 1890. Between 1850 and 1910 the acreage of improved farm land increased from 643,976 to 27,360,666 acres. The proportion of all farm land which was improved rose continuously from 5.6 per cent in 1850 to 40.4 per cent in 1890, indicating for this period a less rapid growth in the total than in the improved acreage. During the decade 1890-1900 the number of acres of improved land decreased. Because of this decrease and of the remarkable increase in the total acreage during that decade, the proportion of improved land fell rapidly, being only 15.6 per cent in 1900.

**Values of farm property: 1850 to 1910.**—The total wealth in the form of farm property is, as before stated, \$2,218,645,000, of which 83.1 per cent represents land and buildings; 14.4 per cent, live stock; and 2.6 per cent, implements and machinery. The aggregate value of farm property increased during the last 10 years by \$1,256,169,000, or 130.5 per cent. To this total increase, \$1,151,435,000 was contributed by land and buildings, \$78,070,000 by live stock, and \$26,665,000 by implements and machinery. The total absolute gain is more than three times as great as that of any other decade covered by the table, while the percentage gain is nearly twice as great as that of the decade immediately preceding. Between 1850 and 1860 there was a marked increase in the value of all three classes of farm property, the aggregate value rising from \$29,115,000 to \$137,186,000, or 371.2 per cent. During the decade 1860-1870, however, there

was a considerable decline in the value of each class, the total value falling to \$80,778,000 in 1870. This decline was due to the destructive effects of the Civil War.

In the 40 years since 1870 the aggregate value has shown an increase of \$2,137,868,000, of which \$175,307,000 took place in the first decade under consideration, \$296,043,000 in the second, 1880 to 1890, and \$410,349,000 in the third. Each class of farm property has shown a greater value at each successive census since 1870, the increase for the last 10 years being especially marked. Land and buildings at each census except 1870 and 1900 have constituted a larger proportion of the total value than at the census im-

mediately preceding, and in the 60 years covered by the table this proportion has risen from 56.8 per cent of the total in 1850 to 83.1 per cent in 1910. Moreover, the relative value of live stock as compared with that of implements and machinery has undergone a considerable change. At the census of 1910 the value of implements and machinery is approximately one-sixth that of live stock, while it was about one-eighth as great in 1900 and less than one-tenth as great in 1890.

The agricultural changes in Texas since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

CENSUS YEAR.	FARM PROPERTY.							
	Total		Land and buildings.		Implements and machinery.		Domestic animals, poultry, and bees.	
	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>
1910.....	\$2,218,645,164	130.5	\$1,843,208,395	166.4	\$56,790,260	88.5	\$318,646,509	32.5
1900.....	962,476,273	74.3	691,773,613	73.0	30,125,705	119.2	240,576,955	73.8
1890.....	* 552,127,104	115.6	399,971,289	134.6	13,746,541	51.9	* 138,409,274	80.8
1880.....	* 256,084,364	217.0	170,468,886	254.2	9,061,491	233.1	* 76,563,987	155.7
1870 <sup>2</sup> .....	80,777,550	-41.1	48,119,960	-45.4	2,717,435	-56.6	29,940,155	-30.1

1850.....	29,114,639		16,550,008		2,161,704		10,412,927	

<sup>1</sup> A minus sign (—) denotes decrease. <sup>2</sup> Includes estimated value of range animals. <sup>3</sup> Computed gold values, being 80 per cent of the currency values reported.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of Texas farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. <sup>1</sup>				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	269.1	\$5,311	\$4,412	\$136	\$763	\$16.39
1900.....	357.2	2,733	1,964	85	683	5.50
1890.....	225.3	* 2,420	1,753	60	* 607	7.78
1880.....	208.4	* 1,470	979	52	* 440	4.70
1870 <sup>2</sup> .....	301.0	1,322	787	44	490	2.62
1860.....	590.9	3,198	2,054	146	998	3.48
1850.....	942.5	2,387	1,357	176	854	1.44

<sup>1</sup> Averages are based on "all farms" in state.

<sup>2</sup> Includes estimated value of range animals.

<sup>3</sup> Computed gold values, being 80 per cent of the currency values reported.

Because of the essentially different types of land and the distinct types of agricultural operations carried on in the several portions of the state, the percentages and averages in the preceding and other summary tables throughout this chapter can not be relied upon as revealing a general condition or movement throughout the state. This is well illustrated in the figures for the average size of farms. At the censuses of 1850 and 1860, and to some extent at the census of 1870, the plantation was the common farm unit in a considerable portion of the eastern half of the state, and the large average size of farms at

those three censuses may be partly accounted for by the fact that each plantation was reported as one farm.

During the last 40 years most plantations have been divided gradually into smaller parcels of land operated largely by tenants. Each of these tenant holdings is reported as a farm and each tenant as a farmer, whether or not the owner of the property lives on the plantation and directs the operations.

In the case of many plantations, although most of the land is now worked by tenants, each of whom is reported as a farmer operating his portion of land as a farm, yet there is some supervision by the owner, so that, in a sense, the entire plantation may be said to constitute a single farm. The Bureau of the Census has recently made an investigation of the extent to which the plantation unit of farm management still prevails, the results of which will appear in a later report.

While the subdivision of larger holdings in certain sections of the state has tended toward a reduction in the average size of farms, this tendency has been counteracted for the state as a whole in recent years by a contrary tendency toward large farms in the western half of the state, following the development of live stock farming on a large scale.

Perhaps the most striking characteristic of the western half of Texas is the great areas of arid and semiarid land utilized for grazing purposes only or left unutilized. The same was true until recently of the extreme southern portion. Upon this land are located many very large farms or ranches, which

tend to give a high average number of acres per farm. It is obvious that averages based on the totals of such diverse agricultural operations as cotton plantations and live stock ranches afford little opportunity for comparisons. It may be noted only that the average size of farms decreased from 942.5 acres in 1850 to 208.4 acres in 1880, then increased to 357.2 acres in 1900, and again decreased to 269.1 acres in 1910. The falling off in the average size of farms during the last decade may be accounted for by the decrease in the reported farm acreage in the western section of the state already discussed. The average size of farms in 1910 for each county of the state is shown in the tables at the close of this chapter.

Bearing in mind the great diversity in the types of farms in the different sections of Texas, it may be noted that for the state as a whole the average value per farm is \$5,311, of which \$4,412 represents the value of land and buildings, \$763 that of live stock, and \$136 that of implements and machinery. The average value, which in 1850 was \$2,387, increased to \$3,198 in 1860, but decreased during the Civil War decade, and in 1870 was only \$1,322. Since 1870 there has been an unbroken increase in the average value, the greatest increase occurring during the last decade, the next greatest during the decade 1880-1890. The average value of land and buildings per acre rose, with considerable fluctuation, from \$1.44 in 1850 to \$16.39 in 1910.

**Farm tenure: 1880 to 1910.**—The following table shows the distribution of the farms of the state according to character of tenure at each census since 1880:

TENURE.	1910	1900	1890	1880
Number of all farms.....	417,770	352,190	228,126	174,184
<b>Farms operated by owners and managers.....</b>	<b>198,195</b>	<b>177,199</b>	<b>132,616</b>	<b>108,716</b>
Farms consisting of owned land only.....	167,515	153,634	(1)	(1)
Farms consisting of owned and hired land.....	28,348	21,005	(1)	(1)
Farms operated by managers.....	2,332	2,560	(1)	(1)
<b>Farms operated by tenants.....</b>	<b>219,575</b>	<b>174,991</b>	<b>95,510</b>	<b>65,468</b>
Share tenants.....	184,753	149,181	75,429	53,379
Share-cash tenants <sup>1</sup> .....	8,639			
Cash tenants.....	17,549			
Tenure not specified <sup>2</sup> .....	8,634	25,810	20,081	12,089
<b>Per cent of farms operated by—</b>				
Owners and managers.....	47.4	50.3	58.1	62.4
Tenants.....	52.6	49.7	41.9	37.6
Share and share-cash.....	46.3	42.4	33.1	30.7
Cash and nonspecified.....	6.3	7.3	8.8	6.9

<sup>1</sup> Not reported separately.

<sup>2</sup> Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880.

<sup>3</sup> Prior to 1910 nonspecified tenants were included with cash tenants.

The number of all farms, and therefore of all farm operators, is 417,770. Of the farm operators, 195,863 are classified as owners, 2,332 as managers, and 219,575 as tenants. Of the owners, 167,515 operate exclusively land owned by them, while 28,348 operate land which they rent in addition to that which they own. The tenants are classified according to the character of their tenancy; thus 184,753 are share tenants;

8,639 share-cash tenants; 17,549, cash tenants; while for 8,634 no report relative to character of tenure was secured.

While the total number of farm operators increased from 228,126 in 1890 to 417,770 in 1910, an increase of 83.1 per cent, the number of tenants increased from 95,510 to 219,575, or 129.9 per cent. The proportion of tenants has increased from 37.6 per cent of all farmers in 1880 to 52.6 per cent in 1910.

For the sake of comparison with the earlier figures the share and share-cash tenants of the census of 1910 have been grouped together, and likewise the cash tenants and those for whom the form of tenure was not specified. Throughout the 30-year period the cash group has been much smaller than the share group, and at the census of 1910 constitutes less than one-eighth of the total number of tenants. The cash tenants comprised slightly over one-seventh of all tenants in 1900, as compared with about one-fifth in 1890 and about one-sixth in 1880.

The following table shows, for white and colored farmers combined and for each class separately, the total and improved acreage and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.

Managers.....	0.1	0.1	2.2	1.0	0.3	0.4	1.2	1.1
Tenants.....	69.5	69.1	54.2	53.2	65.6	64.9	65.3	63.2

It will be seen that, in 1910, 61.6 per cent of all land in farms was in farms operated by their owners (including part owners), 16 per cent in farms operated by managers, and 22.5 per cent in farms operated by tenants, the percentage for owners and for tenants being higher and that for managers lower than in 1900.

Of all land in farms operated by white farmers 62.3 per cent was in farms operated by their owners, and 21.2 per cent in tenant farms, while of that in farms operated by colored farmers, 43.6 per cent was in farms operated by owners and 54.2 per cent in tenant farms. The proportion of land in farms operated by owners increased among white farmers between 1900 and 1910, while among colored farmers it showed a decrease.

As shown by the next table, the average size of farms operated by managers in 1910 (7,699.4 acres) was nearly 22 times as great as that of farms operated by owners (353.3 acres), which was in turn about three times as great as that of farms operated by tenants (115.1 acres). The average size of farms operated by owners and by managers decreased between 1900 and 1910, while that of farms operated by tenants increased. In 1910 the percentages of farm land improved was highest for farms operated by tenants and lowest for those operated by managers, being only 4 in the latter class of farms.

The average size of farms operated by white farmers in 1910 (310.9 acres) was about five times as large as that of farms of colored farmers (61.3 acres); the average size of farms of white farmers decreased decidedly between 1900 and 1910, while that of farms of colored farmers slightly increased. The proportion of land improved was larger for farms of colored farmers than for those of white farmers, being, respectively, 64.8 and 22.7 per cent of the total acreage in each class of farms.

**Farm mortgages: 1890 to 1910.**—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same

class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

CLASS.	OWNED FARMS. <sup>1</sup>		OWNED FARM HOMES.		OWNED FARM HOMES. <sup>2</sup>	
	1910		1900		1890	
	Number.	Per cent. <sup>3</sup>	Number.	Per cent. <sup>3</sup>	Number.	Per cent.
Total.....	195,863	-----	171,975	-----	126,314	-----
Free from mortgage.....	128,082	66.7	125,504	76.6	119,093	94.3
Mortgaged.....	64,008	33.3	38,408	23.4	7,221	5.7
Unknown.....	3,773	-----	8,063	-----	-----	-----

<sup>1</sup> Includes all farms owned in whole or in part by the operator.

<sup>2</sup> The 981 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.

<sup>3</sup> Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 195,863. Of this number, 128,082 were reported as free from mortgage; 64,008 were reported as mortgaged; and for 3,773 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 33.3 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is much higher than it was in 1890 and somewhat higher than in 1900. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that between 1890 and 1910 the absolute increase in the number of mortgaged farms was greater than that in the number free of mortgage.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 64,008 farms reported as mortgaged, 52,207 are wholly owned by the farmers, and for 48,024 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should

be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARMS OR FARM HOMES MORTGAGED.		INCREASE.	
	1910 <sup>1</sup>	1890 <sup>2</sup>	Amount.	Per cent.
Number.....	48,024	7,221		
Value—Land and buildings.....	\$297,880,832	\$15,583,093		
Amount of mortgage debt.....	\$76,089,272	\$6,494,633		
Per cent of debt to value.....	25.5	41.7		
Average value per farm.....	\$6,203	\$2,158	\$4,045	187.4
Average debt per farm.....	\$1,584	\$899	\$685	76.2
Average equity per farm.....	\$4,619	\$1,259	\$3,360	266.9

<sup>1</sup> Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.

<sup>2</sup> Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms increased in the 20 years from \$899 to \$1,584, or 76.2 per cent, while the average value of such farms increased from \$2,158 to \$6,203, or 187.4 per cent. Thus the owner's equity rose from \$1,259 in 1890 to \$4,619 in 1910, or 266.9 per cent. As a result of the greater relative increase in the total farm value than in the total farm debt, the mortgage indebtedness, which was 41.7 per cent of the value of the mortgaged farms in 1890, was only 25.5 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.—More than one-fourth (26.9 per cent) of the farms in Texas are from 50 to 99 acres in size, nearly one-fourth (23.6 per cent) from 20 to 49 acres, and nearly one-fourth (22.6 per cent) from 100 to 174 acres. Hence nearly three-fourths of all the farms in the state are from 20 to 174 acres in size. About one-fifth are 175 acres or over, while the farms of less than 20 acres constitute about 7 per cent of the total. The number of places "under 3 acres" reported as farms is now less than one-third as great as 10 years ago. This decrease may be due to a different interpretation by the enumerators as to what constitutes a small farm, or may represent an actual decrease in that type of farm. A slight decrease, amounting to less than 1 per cent in each case, is shown in the "20 to 49 acres" group, and the group "1,000 acres and over." The number of farms in all the other groups increased, but the relative importance of the groups has been changed somewhat during the decade. The very large farms and those of 10 to 49 acres constitute a smaller proportion of all farms in 1910 than in 1900; farms of 50 to 999 acres and those of 3 to 9 acres a larger proportion.

The next table shows the distribution of farms by size groups at the censuses of 1910 and 1900.

Farms of 50 to 99 acres constituted 27.2 per cent of the farms of white farmers, and farms of 100 to 174

acres ranked second, with 24.8 per cent of the total; among colored farmers, 46 per cent of the farms were farms of 20 to 49 acres, and 25.3 per cent farms of 50 to 99 acres. Of the farms operated by colored farmers, 58.7 per cent were farms of less than 50 acres, as compared with 25 per cent of the farms of white farmers.

The next table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms.

Of the total farm acreage of the state in 1910, 57.2 per cent was in farms of 1,000 acres and over, this being from the standpoint of aggregate acreage the most important size group, although it comprised only 2.7 per cent of the total number of farms. The most notable change between 1900 and 1910 was the decrease in the proportion of the total acreage which was in farms of 1,000 acres and over, offset by increases in the proportion in farms of every

other size group, except that of under 20 acres, for which it remained the same.

SIZE GROUP.	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 20 acres.....	7.0	7.9	0.3	0.3	1.1	1.6	1.5	1.7
20 to 49 acres.....	23.6	23.1	2.9	2.6	10.7	14.9	6.1	8.9
50 to 99 acres.....	28.9	25.1	6.9	5.0	21.0	21.9	14.5	15.2
100 to 174 acres.....	22.6	20.3	10.9	7.4	25.9	23.7	20.3	18.0
175 to 499 acres.....	14.1	12.5	14.2	9.4	23.6	20.3	21.1	18.5
500 to 999 acres.....	3.1	2.9	7.7	5.4	7.5	6.5	8.5	6.9
1,000 acres and over.....	2.7	3.2	57.2	70.1	10.2	11.1	28.0	30.7

As shown by the next table, the percentage of farm land improved diminishes as the average size of the farms increases. For this reason and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land also diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group.

### DOMESTIC ANIMALS, POULTRY, AND BEES.

**Domestic animals on farms: 1910.**—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this chapter, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

Of the total number of farms enumerated, 402,365, or 96.3 per cent, report domestic animals of some kind, the number without any domestic animals being 15,405.

The total value of live stock on farms, including domestic animals, poultry, and bees in 1910 was \$318,647,000, of which domestic animals contributed

**Color and nativity of farmers: 1910.**—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

COLOR AND NATIVITY.	FARM OPERATORS.							
	Total.		Own-ers.	Ten-ants.	Man-agers.	Per cent of total.		
	Num-ber.	Per cent distri-bution.				Own-ers.	Ten-ants.	Man-agers.
Total.....	417,770	100.0	195,863	219,575	2,332	46.9	52.6	0.6
Native white.....	318,988	76.4	157,910	158,958	2,120	49.5	49.8	0.7
Foreign-born white.....	28,864	6.9	16,721	12,012	131	57.9	41.6	0.5
Negro and other nonwhite.....	69,918	16.7	21,232	48,605	81	30.4	69.5	0.1

Of the farmers in Texas, 347,852, or nearly five-sixths of the total number, were whites and 69,918, or approximately one-sixth, nonwhites. All but 28,864 of the white farmers were native born. Of the nonwhite farmers, 69,816 were negroes, 52 Indians, 44 Japanese, and 6 Chinese. Of the native white farmers, 49.8 per cent were tenants, as compared with 41.6 per cent among the foreign-born white farmers. Of the nonwhite farmers, the tenants constituted nearly seven-tenths (69.5 per cent) of the total number.

Of the 28,864 foreign-born white farmers in Texas in 1910, 10,815 were born in Germany; 5,236 in Austria; 1,026 in Sweden; 825 in England; and 710 in Italy. Other European countries were represented by a total of 3,170 farmers, and non-European countries by 7,082.

\$313,165,000. The value of cattle represented 41.7 per cent of the total value of live stock; that of horses and mules, 49.6 per cent; that of swine, 3.7 per cent; that of sheep and lambs, 2 per cent; and that of poultry, 1.5 per cent, the other classes being insignificant.

Cattle are reported by 80.6 per cent of all farms, "dairy cows" by 77.8 per cent, and "other cows" by only 23.7 per cent. The average value of "dairy cows" increased from \$23.22 to \$27.28, while that of cows not kept for dairy purposes decreased from \$19.78 to \$18.84. The average number of "dairy cows" per farm reporting is about 3, while the average number of "other cows" per farm reporting that class is about 25. In 1900 the average number of "other cows" was about 36 per farm reporting.

Horses are reported by 76.4 per cent of all the farms in the state, but 12.4 per cent report yearling colts, and only 7 per cent spring colts. The average values of horses have more than doubled since 1900. Mules are reported by 58.1 per cent of the farms, and number nearly three-fifths as many as horses.

Their average values are considerably higher than those of horses of the corresponding age groups.

Sheep and lambs are reported from only 6,876 farms, or 1.6 per cent of all farms in the state. Of the 6,876 farms, 77.3 per cent report spring lambs, the number of the latter being equal to 46.3 per cent of the number of ewes. The average flock in the state, including all classes, is about 263 sheep, and the average number of ewes is about 143 per farm reporting that class.

Of all farms, 70.3 per cent report swine, the average number being about 8 per farm reporting. The average value of the swine reported as "hogs and pigs born before January 1, 1910," is \$6.14, and that of spring pigs is \$2.24.

The following table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Percent of all farms.	Number.	Value.	Average value.
<b>Total</b> .....	402,365	96.3		\$313,164,540

<b>Goats</b> .....	7,937	1.9	1,135,244	2,514,077	2.21

<sup>1</sup> Less than one-tenth of 1 per cent.

**Poultry on farms: 1910 and 1900.**—The number of fowls on Texas farms decreased 1,191,737, or 8 per

cent, during the last decade, while their value increased \$1,207,674, or 33.6 per cent. The number of farms reporting poultry increased from 304,713 to 357,363, or 17.3 per cent. All classes of fowls decreased in number, but the percentage losses were much greater for turkeys, ducks, and geese than for chickens. This last class represents 93 per cent of the number and 86.1 per cent of the value of all poultry. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value and the number of farms reporting each kind in 1910:

KIND.	1910 (Apr. 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Per cent of all farms.			
<b>Total</b> .....	357,363	85.5	13,669,645	\$4,806,642	14,861,382
Chickens.....	356,875	85.4	12,719,572	4,189,450	13,562,302
Turkeys.....	76,429	18.3	863,666	440,526	648,671
Ducks.....	14,007	3.4	74,910	30,241	234,664
Geese.....	26,807	6.4	244,991	126,791	415,709
Guinea fowls.....	27,828	6.7	170,107	47,042	(1)
Pigeons.....	5,584	1.3	95,625	14,536	(2)
Ostriches.....	1	(3)	12	6,000	36
All other.....	222	0.1	762	2,056	(3)

<sup>1</sup> Included with chickens.

<sup>2</sup> Not reported.

<sup>3</sup> Less than one-tenth of 1 per cent.

<sup>4</sup> 218 farms reported 736 peafowls, valued at \$1,919; 2 farms reported 20 pheasants, valued at \$130; and 2 farms reported 6 wild geese, valued at \$7.

**Bees on farms: 1910 and 1900.**—The number of farms reporting bees has decreased from 60,043 in 1900 to 37,881 in 1910, or 36.9 per cent. The number of colonies of bees decreased from 392,644 to 238,107, or 39.4 per cent, and their value decreased from \$749,483 to \$675,327, or 9.9 per cent. The average value of bees per farm reporting was \$12.48 in 1900 and \$17.83 in 1910. About nine farms in every hundred report bees.

**Domestic animals not on farms: 1910.**—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity.

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.
<b>Total</b> .....	127,539		\$26,289,303	
All cattle.....	74,505	204,814	5,971,625	\$29.16
Dairy cows.....	71,435	102,349	4,320,478	42.21
Horses.....	86,914	153,513	15,509,356	101.03
Mules.....	9,800	30,975	3,920,539	126.57
Asses and burros.....	1,593	2,698	202,644	75.11
Swine.....	28,662	93,695	623,412	6.65
Sheep.....	213	4,008	13,655	3.41
Goats.....	1,129	14,801	28,172	1.89

Horses are by far the most important class of domestic animals not on farms when value is considered, but the number of cattle (including dairy cows) is greater than the number of horses.

**Domestic animals on farms and not on farms: 1910.**—The total value of all domestic animals in the state in 1910 was \$339,434,000, of which the value of animals not on farms constituted 7.7 per cent.

The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Number.	Value.	Number.	Value.	Number.	Value.
Total.....		\$339,433,843		\$313,164,540		\$26,269,303
All cattle.....	7,139,400	138,957,404	6,934,586	132,985,879	204,814	5,971,525
Dairy cows.....	1,116,216	31,978,006	1,013,867	27,657,528	102,349	4,320,478

## LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

**Dairy products: 1909 and 1899.**—The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	324,983	77.8	1,013,867	Head.		
On farms reporting dairy products in 1909.....	268,684	64.3	874,807	Head.		
On farms reporting milk produced in 1909.....	260,032	62.2	832,843	Head.		
Specified dairy products, 1909:						
Milk reported.....			197,039,954	Gals..		
Butter made.....	266,724	63.8	64,993,214	Lbs...	\$12,911,632	\$0.20
Cheese made.....	1,095	0.3	194,990	Lbs...	20,351	0.10
Milk sold.....	6,379	1.5	8,990,968	Gals..	2,069,314	0.23
Cream sold.....	1,188	0.3	452,072	Gals..	354,628	0.78

Cheese sold.....			76,148	Lbs...	7,462	0.10

<sup>1</sup> Less than one-tenth of 1 per cent.

The number of farms reporting dairy cows on April 15, 1910, was 324,983, but only 268,684 reported

dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 260,032 (somewhat less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 833,000. The amount of milk reported was 197,040,000 gallons; assuming that there were the same number of cows in 1909 as in 1910 this would represent an average of 237 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk and cream sold as such and sold on the butter fat basis and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$15,680,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farms producing.

Only a small proportion of the milk reported as produced by Texas farmers in 1909 was sold as such. The butter made on farms in 1909 was valued at \$12,912,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that the 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a decided increase between 1899 and 1909 in the amount of butter made, and also an increase in the production of cheese.

**Wool: 1909 and 1899.**—The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates:<sup>1</sup>

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value
Sheep of shearing age on farms April 15, 1910....	6,564	1,377,724			
Wool produced, as reported, 1909.....	4,189		1,641,416	8,371,754	\$1,799,089
On farms reporting sheep April 15, 1910.....	3,916	1,088,600	1,586,107	8,105,120	1,740,167
On other farms.....	273		55,309	266,634	58,922
Total production of wool (partly estimated):.....			2,007,045	10,257,778	2,202,042
1899.....			2,038,433	9,635,002	1,425,122
Increase 1889 to 1909.....			3,110	619,777	774,220
Percent of increase.....			-1.5	6.4	54.2

<sup>1</sup> A minus sign (—) denotes decrease.

The total number of sheep of shearing age in Texas on April 15, 1910, was 1,378,000, representing a decrease of 4.3 per cent as compared with the number on June 1, 1900 (1,440,000). The approximate production of wool during 1909 was 2,007,000 fleeces, weighing 10,258,000 pounds, and valued at \$2,202,000. Of these totals about one-fifth represents estimates. The number of fleeces produced in 1909 was 1.5 per cent less than in 1899. The average weight per fleece in 1909 was 5.1 pounds, as compared with 4.7 pounds in 1899, and the average value per pound was 21 cents, as compared with 15 cents in 1899.

**Goat hair and mohair: 1909 and 1899.**—Although 7,937 farmers reported 1,135,244 goats and kids on their farms April 15, 1910, only 1,544 reported the production of goat hair or mohair during 1909. These farmers, however, reported 1,077,463 fleeces, weighing 1,997,924 pounds and valued at \$468,219. The importance of the production increased decidedly between 1899 and 1909. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

**Poultry products: 1909 and 1899.**—The next statement gives data relative to the production and sale of eggs and poultry.

<sup>1</sup> Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 2,648 farmers who reported the possession of 289,124 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909, but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.

Percent of increase.....				40.9
Fowls sold, as reported, 1909.....	142,183		5,761,978	2,042,147

The total number of fowls on Texas farms on April 15, 1910, was 13,670,000. Of the 357,363 farms reporting fowls, 65,086 did not report any eggs produced in 1909, and 70,166 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 62,480,000 dozens, valued at \$9,586,000. According to the Twelfth Census reports the production of eggs in 1899 was 58,041,000 dozens, the value being \$4,672,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 77,845,000 dozens, valued at \$11,944,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 25,656,000 fowls, valued at \$7,481,000.

**Honey and wax: 1909.**—Although, as noted elsewhere, 37,881 farms reported 238,107 colonies of bees on hand April 15, 1910, 20,749 of these farms, with 81,387 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 3,093,097 pounds of honey, valued at \$308,488, and 58,402 pounds of wax, valued at \$14,310; the true totals are doubtless somewhat above these figures.

**Sale or slaughter of domestic animals on farms: 1909 and 1899.**—The total value of domestic animals sold during 1909 was \$78,648,000, and that of animals slaughtered on farms \$15,152,000, making an aggregate of \$93,800,000. This total, however, involves considerable duplication, resulting from the resale or slaughter

of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented about three-fourths of the total value of animals sold; and the value of mules sold, representing about one-tenth of the total, ranked next in importance.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the value of those slaughtered during 1899, which amounted, respectively, to \$34,357,000 and \$11,033,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

The next statement presents statistics relating to the sale or slaughter of domestic animals by Texas farmers during the year 1909, with certain items for 1899.

	FARMS REPORTING.		Number of animals.	VALUE.	
	Number.	Percent of all farms.		Total.	Average.
1909—All domestic animals:					
Sold.....				\$78,647,800

Slaughtered.....				11,032,614	

<sup>1</sup> Schedules called for receipts from sales of animals raised on the farms reporting.

### CROPS.

**Summary: 1909 and 1899.**—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is, on the whole, a better index of

the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

	ACRES.				PER CENT OF IMPROVED LAND OCCUPIED.		VALUE OF PRODUCTS.					
	1909	1899	Increase. <sup>1</sup>				1909	1899	Increase. <sup>1</sup>		Per cent of total.

Miscellaneous.....							25,314	21,790	3,524	16.2	( <sup>2</sup> )	( <sup>2</sup> )

<sup>1</sup> A minus sign (—) denotes decrease.

<sup>2</sup> Less than one-tenth of 1 per cent.

<sup>3</sup> Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The total value of crops in 1909 was \$298,133,000. Of this amount, 96.4 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The

combined acreage of crops for which acreage was reported was 18,389,092, representing 67.2 per cent of the total improved land in farms (27,360,666 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of Texas agriculture is indicated by the fact that nearly two-thirds (63.3 per cent) of the total value of crops in 1909 was contributed by cotton and less than one-fourth (22.5 per cent) by the cereals. The remainder, representing 14.2 per cent of the total, consisted mostly of hay and forage, potatoes and other vegetables, and forest products.

The total value of crops in 1909 was 78.6 per cent greater than in 1899, this increase being no doubt due in part to higher prices. There was an increase of 21.7 per cent in the total acreage of crops for which acreage was reported. The greatest absolute increase was in the acreage of cotton, and the only important decrease was in the acreage of cereals.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The following table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, cotton, broom corn, and sundry minor crops:

CROP.	Farms reporting.	Acres harvested.	QUANTITY.		Value.
			Amount.	Unit.

Sundry minor crops, total <sup>4</sup> .....		5			140

<sup>1</sup> Includes small amounts of soy beans and sunflower seed.

<sup>2</sup> A considerable amount of this acreage is probably a duplication of other crop acreage.

<sup>3</sup> The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers and plants, etc.

<sup>4</sup> Includes small amounts of willows and chufas.

mated), \$25,939,000; hay and forage, \$12,824,000; rough rice, \$6,106,000; kafir corn and milo maize, \$3,785,000; oats, \$3,700,000; wheat, \$2,891,000; and sweet potatoes and yams, \$2,198,000. It should be noted, however, that the values of other crops, statistics for which appear elsewhere in this report, are greater than those of several of the crops listed above.

Cotton is the leading crop, with an acreage exceeding that of all other crops enumerated in the table, and a value almost twice as great. Corn is the leading cereal, the total acreage and value of all the other cereals being about one-third as great as those of corn. Of the other cereals rice stands first in value and fourth in acreage. In both acreage and value kafir corn and milo maize, oats, and wheat follow in the order named.

Among the hay and forage crops, "coarse forage" stands first both in acreage and value. "Wild, salt, or prairie grasses" is second in acreage and third in value, while "other tame or cultivated grasses" ranks third in acreage and second in value. These three crops together constitute about four-fifths of the acreage and three-fourths of the value of the entire crop.

The value of peanuts, sweet potatoes and yams, and potatoes combined is only about two-fifths as great as that of hay and forage.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

CROP YEAR.	ACRES HARVESTED.					
	Corn.	Oats.	Wheat.	Rough rice.	Hay and forage.	Cotton.
1909.....	5,130,052	440,001	326,176	237,586	1,311,967	9,930,179
1899.....	5,017,690	847,225	1,027,947	8,711	988,024	6,960,367
1889.....	3,079,907	528,924	352,477	178	377,523	3,934,525
1879.....	2,468,587	238,010	373,570	335	58,033	2,178,435

The acreage of cotton shows an uninterrupted and strikingly rapid increase throughout the period. During the first decade, 1879-1889, the absolute increase was 1,756,090 acres; during the second, 3,025,842 acres; and during the last, 2,969,812 acres. As a result, the cotton acreage is more than four and one-half times that of 30 years ago. Corn also has increased in acreage, but less rapidly. For the period it shows a continuous rise, the greatest gain, 1,937,783 acres, occurring during the second decade, 1889-1899. During the 20 years since 1889 hay and forage has more than trebled in acreage. Wheat shows a slight decrease in acreage for the first decade, a large increase for the second, but in the last decade it has fallen to a point lower than in 1889. Oats show a substantial gain in acreage for the first 20 years of the period, with a marked loss during the last 10 years, decreasing by almost one-half. Rice, from insignificant acreages in the first years of the period and a comparatively small one in 1899, has increased strikingly (more than 225,000 acres) during the last ten years.

The leading crops covered by the table, in the order of their importance as judged by value, are cotton, \$162,735,000; corn, \$50,565,000; cotton seed (esti-

The following table shows, for 1909 and 1899, the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909.

Hay and forage.....	26.5	27.1	4.8	4.8	39.9	0.96 Ton.	9.77
Cotton.....	75.8	89.6	36.3	35.6	42.7	0.25 Bale.	16.39

<sup>1</sup> A minus sign (-) denotes decrease.

<sup>2</sup> Less than one-tenth of 1 per cent.

Cotton is reported by 76 farms out of every 100, corn by 69, hay and forage by 27, oats by 7, kafir corn and milo maize by 6, and wheat by 2. Only 0.3 per cent of the farms report rice. Of the above percentages those for corn, oats, wheat, hay and forage, and cotton are lower than in 1899, while those for kafir corn and milo maize and rice are higher.

The seven crops included in the above table cover about 66 per cent of the improved land, as compared with about 76 per cent in 1899. Corn, oats, and wheat show decreases in the proportion of improved land occupied, as compared with that of 1899, while kafir corn and milo maize, rice, and cotton show increases. Hay and forage occupies the same proportion as in 1899. The decrease in the acreage of the cereals is 216,487 acres, or 3.1 per cent; the increase in that of hay and forage, 373,943 acres, or 39.9 per cent.

The average value per acre of the combined cereals is \$9.99. Of the cereals, only rice stands above this average, its value being more than two and one-half times as great. The average value per acre of hay and forage is slightly less than that of the combined cereals, and that of cotton is greater by \$6.40.

The principal acreages of cotton are found in the counties of the eastern half of the state, forming a group which stretches from the Red River on the north nearly to the southern and southeastern boundaries. There is, however, a concentration of the acreage in those counties lying in the portion of the state described as the Calcareous prairies. To a greater or less extent, 22 counties are included in this section, and these counties together report about one-third of the total acreage. Ellis County leads, with 274,666 acres. Several other counties—Hill, McLennan, Williamson, and Navarro—also run over 200,000 acres. The greatest absolute gain is reported for Runnels County; the greatest absolute loss for Fayette County.

In acreage corn follows very closely the same section as cotton. In fact, the large acreages of corn are found almost invariably in the counties that report large acreages of cotton. Collin County leads in corn acreage. Increases are recorded for several single counties and also for a number of groups of more or less importance. The main group is made up of a row of counties, two to three in width, stretching across the state from the extreme eastern line along the Red River until it meets that section topographically described as the high plains region, where the bulk of the increases are located. The largest absolute increase is reported for Wilbarger County. Hay and forage is quite evenly distributed throughout the state. The important acreages, as a rule, are reported for the counties of the Panhandle, the Red River Valley, the north central, and the south central parts of the state. Randall County leads in the hay and forage acreage. Though increases are prevalent throughout the state, decreases are reported for a number of counties. The greatest absolute increase is recorded for Randall County.

Rice is reported for 19 counties, almost all of which lie in the upper portion of the Coastal Plain prairie on and near the Gulf of Mexico. Jefferson County reports the greatest acreage. Over two-thirds of the total acreage is recorded for three counties—Jefferson, Matagorda, and Wharton. The principal acreages of kafir corn and milo maize are found in the counties just to the northwest of the center of the state and extending into the Panhandle. These 17 counties together report over one-half of the total acreage. More than one-half of the acreage of oats is reported for 13 counties, consisting of two groups and three scattered counties. One group of seven counties is located in the northeastern part of the state on or near the Red River, while the second, a group of three counties, is in the east central part of the state. Grayson County reports the largest acreage.

In the acreage of wheat remarkably high relative decreases are reported from almost every county in the wheat growing section of the state. The Panhandle section, however, and a few scattered counties report increases. The greatest falling off in acreage is recorded for the counties of the Red River Valley and for those in the central part of the eastern half of the state. The greatest absolute loss is shown by Collin County, the decrease amounting to 67,387 acres.

Potatoes and sweet potatoes and yams are reported principally from the eastern half of the state, Harris County reporting the greatest acreage. There is a concentration of the peanut acreage in the north-eastern and eastern portions of the state. Houston and Panola Counties report the greatest acreages.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details

with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products:

CROP.	FARMS REPORTING: 1909		ACRES.		VALUE OF PRODUCTS.	
	Num-ber.	Per cent of all farms.	1909	1899	1909	1899
Vegetables, other than potatoes and sweet potatoes and yams, total.....	156,564	44.7	124,690	111,899	\$5,099,306	\$5,260,638
Farms reporting a product of \$500 or over.....	1,338	0.3	19,439		2,040,756	
All other farms.....	155,226	44.3	105,251		6,058,548	
Flowers and plants, total.....	182	(?)	335	167	474,300	120,249
Farms reporting a product of \$250 or over.....	92	(?)			466,830	
All other farms.....	90	(?)			7,540	
Nursery products, total.....	233	0.1	3,847	2,093	1,253,110	314,511
Farms reporting a product of \$250 or over.....	132	(?)			1,236,445	
All other farms.....	101	(?)			16,665	

\* Does not include 56,321 farms which reported that they had vegetable gardens, but gave no information as to their products.  
 † Less than one-tenth of 1 per cent.

In 1909 the total acreage of potatoes and other vegetables was 202,792 and their value \$12,122,255. Excluding (so far as separately reported<sup>1</sup>) potatoes and sweet potatoes and yams, the acreage of vegetables was 124,690 and their value \$8,099,000, both acreage and value being materially greater than in 1899. The table distinguishes between farms which make the raising of vegetables a business of some importance (having produced vegetables valued at \$500 or more in 1909) and other farms, on most of which vegetables are raised mainly for home consumption. There were in 1909, 1,338 farms in the first class, representing about one-sixth of the total acreage of vegetables and about one-fourth of the total value, the average acreage of vegetables for these farms being 14.5 and the average value of product per acre \$104.98.

The raising of flowers and plants and of nursery products was also of some importance in Texas, 4,182 acres being devoted to them in 1909, and the output being valued at \$1,727,470. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

**Small fruits: 1909 and 1899.**—Strawberries are by far the most important of the small fruits raised in Texas, with blackberries and dewberries ranking next. The total acreage of small fruits in 1909 was 5,053, and in 1899, 3,904, an increase of 29.4 per cent. The production in 1909 was 6,183,000 quarts, as compared with 5,209,000 quarts in 1899, and the value was \$480,000 in 1909, as compared with \$305,000 in 1899.

<sup>1</sup> It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

The following table shows data with regard to small fruits on farms:

CROP.	Num-ber of farms reporting: 1909	ACRES.		Quantity (quarts): 1909	Value: 1909
		1909	1899		
Small fruits, total.....		5,053	3,904	6,183,742	\$480,331
Strawberries.....	1,422	2,161	1,361	4,207,056	334,651

Raspberries and loganberries.....	224	104	103	97,652	6,302
Currants.....	49	6	4	4,873	496
Gooseberries.....	11	9	1	5,042	325
Other berries.....			41		

**Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.**—The following table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

CROP.	TREES OR VINES OF BEARING AGE: 1910		TREES OR VINES NOT OF BEARING AGE: 1910		PRODUCT.

<sup>1</sup> Bushels.

<sup>2</sup> Included with "unclassified."

<sup>3</sup> Consists of products not separately named by the enumerator, but grouped under the designation "all other."

<sup>4</sup> Pounds.

<sup>5</sup> Includes chestnuts, hickory nuts, chinquapins, Japanese walnuts, Spanish walnuts, filberts, Japanese chestnuts, French walnuts, hazelnuts, butternuts, and other nuts.

<sup>6</sup> Includes dates, bananas, pineapples, and pomegranates.

<sup>7</sup> Boxes.

The total quantity of orchard fruits produced in 1909 was 1,090,000 bushels, valued at \$1,061,000. Peaches and nectarines contributed about two-thirds

of this quantity; apples, pears, and plums and prunes most of the remainder. The production of grapes in 1909 amounted to 1,803,000 pounds, valued at \$78,000, and that of nuts to 5,946,000 pounds, valued at \$563,000, the tropical fruits produced in 1909 were valued at \$123,000.

The production of all orchard fruits together in 1909 was 53.8 per cent less in quantity than in 1899, and the production of grapes also decreased. The value of orchard fruits decreased from \$1,345,000 in 1899 to \$1,061,000 in 1909, and that of grapes from \$126,355 in 1899 to \$78,325 in 1909. It should be noted that the values for 1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes. Values were not called for on the schedule.

PRODUCT.	FARMS REPORTING: 1909.		QUANTITY PRODUCED.		
	Num-ber.	Percent of all farms.	Unit.	1909	1899
Cider.....	114	( <sup>1</sup> )	Gals....	4,803	55,566
Vinegar.....	572	0.1	Gals....	10,039	43,659
Wine and grape juice.....	731	0.2	Gals....	42,036	104,987
Dried fruits.....	563	0.1	Lbs....	26,189	84,630

<sup>1</sup> Less than one-tenth of 1 per cent.

**Forest products: 1909 and 1899.**—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 140,946 farms in Texas (33.7 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$8,925,662 as compared with \$3,520,033 in 1899, an increase of 153.6 per cent. Of the value in 1909, \$5,714,728

was reported as that of products used or to be used on the farms themselves, \$2,838,114 as that of products sold or for sale, and \$372,820 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

**Sugar crops: 1909 and 1899.**—The table below shows data with regard to sugar cane, and also for sorghum cane and sugar beets. The total value of the sugar cane products in 1909 was \$1,670,000, as compared with \$977,000 in 1899, and the total value of sorghum cane products was \$956,000 in 1909, as compared with \$555,000 in 1899.

PRODUCT.	FARMS REPORTING.		Acres.	PRODUCT.		
	Number.	Percent of all farms.		Amount.	Unit.	Value.
Sugar beets:						
1909.....	161	( <sup>2</sup> )	293	611	Tons..	\$5,919
1899.....	20	( <sup>2</sup> )	135	523	Tons..	2,451
Sorghum cane:						
Total, 1909.....						\$956,000

Total, 1899.....						554,790
Cane grown.....	31,948	9.1	26,803	174,965	Tons..	
Cane sold as such.....				88,933	Tons..	263,618
Sirup made.....				877,232	Gals..	291,272
Sugar cane:						
Total, 1909.....						\$1,670,000
Cane grown.....	19,718	4.7	34,315	307,302	Tons..	
Cane sold as such.....	260	0.1		167,831	Tons..	562,661
Sugar made.....	7	( <sup>2</sup> )		6,910	Lbs..	289
Sirup made.....	19,054	4.6		2,246,774	Gals..	1,106,733
Total, 1899.....						\$977,000
Cane grown.....	15,694	4.5	17,824	170,485	Tons..	
Cane sold as such.....	4,043	1.1		54,758	Tons..	219,905
Sugar made.....	39	( <sup>2</sup> )		2,789,250	Lbs..	134,074
Sirup made.....	11,612	3.3		888,637	Gals..	365,819
Molasses made.....				98,950	Gals..	6,719

<sup>1</sup> Used as root forage.

<sup>2</sup> Less than one-tenth of 1 per cent.

<sup>3</sup> Includes cane used as coarse forage.

<sup>4</sup> Includes cane reserved for seed.

**Miscellaneous crops: 1909.**—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 189 farmers in Texas sold, during 1909, 2,149 tons of straw, for which they received \$12,922, and that 304 farmers sold 1,688 tons of cornstalks and leaves, for which they received \$12,392.

## SELECTED FARM EXPENSES AND RECEIPTS.

**Farm expenses: 1909 and 1899.**—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899:

EXPENSE.	1909			1899	INCREASE.	
	Farms reporting.			Amount.	Amount.	Per cent.
	Number.	Percent of all farms.	Amount.			
Labor.....	160,538	38.4	\$25,794,501	\$12,331,905	\$13,462,596	109.1
Feed.....	112,866	27.0	10,800,000	(1)		
Fertilizer.....	15,931	3.8	595,368	124,710	470,647	377.4

(1) Not reported at the census of 1900.

Nearly two-fifths of the farmers hire labor, the average amount expended by the farmers hiring being \$161. During the decade the total expenditure for labor increased \$13,453,000, or 109.1 per cent. About one-eighth of the amount reported as expended for labor is in the form of rent and board. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

About one farmer out of every four reports some expenditure for feed, but only about four out of every hundred purchase fertilizer. The expenditure for feed

amounted to \$10,800,000 in 1909, and averaged \$95.69 per farm reporting. The total amount reported as paid for fertilizer has increased \$471,000, or 377.4 per cent, during the decade, the average per farm reporting being \$37.37.

**Receipts from sale of feedable crops: 1909.**—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as of the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Num-ber.	Percent of all farms.	Amount.	Unit.	
<b>Total.....</b>					<b>\$8,295,157</b>
Corn.....	49,459	11.8	7,528,837	Bu.....	4,800,808
Oats.....	5,488	1.3	2,368,879	Bu.....	1,254,300
Barley.....	63	(1)	9,510	Bu.....	5,920
Hay and coarse forage.....	12,480	3.0	201,434	Tons.....	2,135,000

(1) Less than one-tenth of 1 per cent.

While the total amount expended by Texas farmers for the purchase of feed in 1909 was \$10,800,000, the total receipts from the sale of feed by those reporting sales amounted to \$8,295,000.

## COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or

trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

*Change of boundaries.*—In comparing the data secured in 1910 with those for 1900, the following changes in county boundaries should be considered: Reagan County was organized from a part of Tom Green County in 1903; and Terrell County was organized from a part of Pecos County in 1905.

*Land in farms in specified counties.*—Following the instructions to enumerators to assign all of the acreage of a farm to the county in which the residence of the operator is located, large acreages belonging to adjoining counties have been tabulated in Armstrong, Dickens, Howard, Jackson, Lamb, Mitchell, Motley, Nueces, Tom Green, and Upton Counties.

TABLE 1.—FARMS AND FARM PROPERTY.

Continued from Table 1, 1900, in values.

	Farm State.			Anderson.	Andrew.	Angelina.	Aransas.	Archer.

Aggregated land area.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land in farms.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land in farms in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Improvement land in farms.	257,771	247,682	85,151	2,772	25	1,593	79	782
Improvement land in farms in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Woodland in farms.	257,771	247,682	85,151	2,772	25	1,593	79	782
Other unimproved land in farms.	257,771	247,682	85,151	2,772	25	1,593	79	782
Per cent of land area in farms.	257,771	247,682	85,151	2,772	25	1,593	79	782
Per cent of land area in farms in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Average acres per farm.	257,771	247,682	85,151	2,772	25	1,593	79	782
Average improved acres per farm.	257,771	247,682	85,151	2,772	25	1,593	79	782
VALUE OF FARM PROPERTY.								
All farm property.	257,771	247,682	85,151	2,772	25	1,593	79	782
All farm property in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Per cent increase, 1900-1901.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Buildings.	257,771	247,682	85,151	2,772	25	1,593	79	782
Buildings in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Implement and machinery.	257,771	247,682	85,151	2,772	25	1,593	79	782
Implement and machinery in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Domestic animals, poultry, and bees.	257,771	247,682	85,151	2,772	25	1,593	79	782
Domestic animals, poultry, and bees in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
Per cent of value of all property in—								
Land.	257,771	247,682	85,151	2,772	25	1,593	79	782
Buildings.	257,771	247,682	85,151	2,772	25	1,593	79	782
Implement and machinery.	257,771	247,682	85,151	2,772	25	1,593	79	782
Domestic animals, poultry, and bees.	257,771	247,682	85,151	2,772	25	1,593	79	782
Average value—								
All property per farm.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land and buildings per farm.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land per acre.	257,771	247,682	85,151	2,772	25	1,593	79	782
Land per acre in 1900.	257,771	247,682	85,151	2,772	25	1,593	79	782
DOMESTIC ANIMALS, Poultry, and Bees.								
Farms reporting domestic animals.	257,771	247,682	85,151	2,772	25	1,593	79	782
Value of domestic animals.	257,771	247,682	85,151	2,772	25	1,593	79	782
Cattle.	257,771	247,682	85,151	2,772	25	1,593	79	782
Per cent number.	257,771	247,682	85,151	2,772	25	1,593	79	782
Per cent value.	257,771	247,682	85,151	2,772	25	1,593	79	782

TABLE 1.—FARMS AND FARM PROPERTY,

[Comparative data for June 1, 1900, in italics.]

		Coke.	Coleman.	Collin.	Collingsworth.	Colorado.	Comal.	Comanche.	Concho.
1	Population.....	6,412	22,618	49,021	5,224	18,897	8,434	27,186	6,654
2	Population in 1900.....	5,430	10,077	50,087	1,833	28,803	7,008	23,009	1,437
3	Number of all farms.....	969	2,938	6,507	806	2,288	899	4,272	865
4	Number of all farms in 1900.....	480	1,869	6,551	818	2,928	747	3,543	119
5	Color and nativity of farmers:								
6	Native white.....	955	2,872	6,342	799	1,029	656	4,356	814
7	Foreign-born white.....	14	65	30	7	562	231	15	51
8	Negro and other nonwhite.....		1	135		692	12	1	
9	Number of farms, classified by size:								
10	Under 3 acres.....	7	28	119		53	19	72	1
11	3 to 9 acres.....	15	33	236	2	133	34	120	4
12	10 to 19 acres.....	93	265	1,918	8	658	126	784	56
13	20 to 49 acres.....	145	664	2,677	86	440	206	1,622	158
14	50 to 99 acres.....	277	999	1,156	290	465	140	1,142	257
15	100 to 174 acres.....	92	456	252	102	233	65	312	107
16	175 to 259 acres.....	155	327	135	160	160	112	208	158
17	260 to 499 acres.....	90	97	13	100	90	87	66	63
18	500 to 999 acres.....	90	97	13	100	90	87	66	63
19	1,000 acres and over.....	90	97	13	100	90	87	66	63
20	LAND AND FARM AREA								
21	Approximate land area.....	595,840	825,600	561,920	574,720	622,080	357,760	606,720	587,520
22	Land in farms.....	555,333	718,107	501,855	412,845	383,919	353,821	541,475	538,835
23	Land in farms in 1900.....	605,842	807,872	609,419	584,692	478,241	317,099	522,273	616,088
24	Improved land in farms.....	65,985	238,751	427,581	104,892	167,866	47,453	252,560	80,582
25	Improved land in farms in 1900.....	21,274	89,031	377,594	21,494	183,555	47,998	167,423	6,184
26	Woodland in farms.....	161,775	134,000	43,458	1,955	131,996	239,909	171,990	186,557
27	Other unimproved land in farms.....	327,573	345,356	30,816	305,998	84,057	66,459	116,922	271,396
28	Per cent of land area in farms.....	93.2	87.0	89.3	71.8	61.7	98.9	89.2	91.7
29	Per cent of farm land improved.....	11.0	33.2	85.2	25.4	43.7	13.4	46.6	15.0
30	Average acres per farm.....	573.1	244.4	77.1	512.2	168.2	393.6	123.8	622.9
31	Average improved acres per farm.....	68.1	81.3	65.7	130.1	73.5	52.8	57.8	93.2
32	VALUE OF FARM PROPERTY								
33	All farm property.....	6,686,196	19,669,466	33,444,289	7,362,884	9,704,144	7,320,594	17,153,936	8,166,342

TABLE 1.—FARMS AND FARM PROPERTY.

[Comparative data for June 1, 1900, in italics.]

		Kerr.	Kimble.	King.	Kinney.	Knox.	La Salle.	Lamar.	Lamb.	Lampasas.
1	Population.....	5,505	3,261	810	3,401	9,625	4,747	46,544	540	9,532
2	Population in 1900.....	4,980	2,503	490	2,447	2,323	2,303	48,627	51	8,656
3	Number of all farms.....	569	415	107	150	1,175	263	6,156	92	1,219
4	Number of all farms in 1900.....	606	271	63	83	306	107	8,514	5	896
5	Color and nativity of farmers:									
6	Native white.....	504	398	107	131	1,130	230	5,007	84	1,176
7	Foreign-born white.....	58	17		16	45	30	22	8	32
8	Negro and other nonwhite.....	7			3		3	1,127		11
9	Number of farms, classified by size:									
10	Under 3 acres.....				4			6		
11	3 to 9 acres.....				10			190		
12	10 to 19 acres.....	22	7		11		13	372		31
13	20 to 49 acres.....	36	23	5	9		30	2,280	1	126
14	50 to 99 acres.....	39	34	21	6	253	39	2,049	6	191
15	100 to 174 acres.....	101	40	26	11	394	43	898	19	258
16	175 to 259 acres.....	44	18	12	10	172	14	201	6	147
17	260 to 499 acres.....	112	61	19	15	131	33	120	24	232
18	500 to 999 acres.....	90	63	7	27	49	26	24	24	123
19	1,000 acres and over.....	108	154	17	65	44	59	16	12	83
LAND AND FARM AREA										
20	Approximate land area..... acres.....	766,060	832,640	554,880	839,680	551,680	999,040	604,800	654,080	473,600
21	Land in farms..... acres.....	701,319	700,384	417,023	562,624	520,405	996,232	468,676	1,869,459	457,906
22	Land in farms in 1900..... acres.....	881,836	719,615	480,832	679,274	449,289	1,121,228	487,781	1,688,520	589,519
23	Improved land in farms..... acres.....	32,236	16,692	8,943	7,752	142,354	23,482	313,779	13,797	81,399
24	Improved land in farms in 1900..... acres.....	24,887	18,931	1,609	1,643	45,706	4,039	300,039	570	62,188
25	Woodland in farms..... acres.....	339,936	594,020	95,109	108,255	134,505	84,544	120,264	831	168,991
26	Other unimproved land in farms..... acres.....	329,147	89,672	312,971	446,617	243,546	888,206	34,633	854,831	207,576
27	Per cent of land area in farms.....	91.5	84.1	75.2	67.0	94.3	99.7	77.5	132.9	96.7
28	Per cent of farm land improved.....	4.6	2.4	2.1	1.4	27.4	2.4	66.9	1.6	17.8
29	Average acres per farm.....	1,232.5	1,687.7	3,897.4	3,750.5	442.9	3,788.0	76.1	9,450.6	375.6
30	Average improved acres per farm.....	56.7	40.2	83.6	51.7	121.2	89.3	51.0	150.0	66.8
VALUE OF FARM PROPERTY										
31	All farm property..... dollars.....	5,670,713	5,531,419	2,774,854	3,473,474	10,191,039	10,122,361	18,473,846	7,782,544	7,042,888

## CHAPTER 4.

# GENERAL STATISTICS OF IRRIGATION FOR THE STATE AND ITS COUNTIES.

**Introduction.**—This chapter presents the larger part of the general statistics of irrigation for Texas obtained in connection with the Thirteenth Census. It also includes the data pertaining to irrigation for rice growing. The statistics of the number of farms and acreage irrigated, cost of operation and maintenance, and irrigated crops are for the calendar year 1909; those of irrigation works, cost of enterprises, acreage enterprises were capable of irrigating in 1910, and acreage included in projects of the date July 1, 1910.

These statistics have been collected under the law of February 25, 1910, which contained the following clause relating to irrigation:

Inquiries shall also be made as to the location and character of irrigation enterprises, quantity of land irrigated in the arid region of the United States and in each state and county in that section under state and Federal laws; the price at which these lands, including water rights, are obtainable; the character and value of crops produced on irrigated lands, the amount of water used per acre for said irrigation and whether it was obtainable from national, state, or private works; the location of the various projects and methods of construction, with facts as to their physical condition; the amount of capital invested in such irrigation works.

The information called for by this law which could be supplied by farm operators was obtained on supplemental schedules by the regular census enumerators as a part of the agricultural census. The remaining data, which were supplied by the owners or officials of irrigation enterprises, were obtained on special schedules by special agents. The data relating to number of farms irrigated and irrigated crops are taken from the supplemental schedules, while all data relating to acreage irrigated and to irrigation works and their construction and operation are taken from the special schedules.

In accordance with the law, the data collected have been classified primarily by the state and Federal laws by virtue of which the land was brought under irrigation. The results are presented in detail at the end of this chapter and summarized in-text tables.

Such of the terms used as are not self-explanatory are defined below.

**Farms irrigated.**—The number of "farms irrigated" is the number of farms on which irrigation is practiced and is equivalent to the term "number of irrigators" used in previous census reports.

**Types of enterprise.**—The types of enterprise under which the lands irrigated in 1909 are classified are as follows:

*United States Reclamation Service enterprises*, which operate under the Federal law of June 17, 1902, providing for the construction of irrigation works with the receipts from the sale of public lands.

*United States Indian Service enterprises*, which operate under various acts of Congress providing for the construction by that service of works for the irrigation of land in Indian reservations.

*Carey Act enterprises*, which operate under the Federal law of August 18, 1894, granting to each of the states in the arid region 1,000,000 acres of land on condition that the state provide for its irrigation, and under amendments to that law granting additional areas to Idaho and Wyoming.

*Irrigation districts*, which are public corporations that operate under state laws providing for their organization and management, and empowering them to issue bonds and levy and collect taxes with the object of obtaining funds for the purchase or construction and for the operation and maintenance of irrigation works.

*Cooperative enterprises*, which are controlled by the water users under some organized form of cooperation. The most common form of organization is the stock company, the stock of which is owned by the water users.

*Commercial enterprises*, which supply water for compensation to parties who own no interest in the works. Persons obtaining water from such enterprises are usually required to pay for the right to receive water, and to pay, in addition, annual charges based in some instances on the acreage irrigated and in others on the quantity of water received.

*Individual and partnership enterprises*, which belong to individual farmers or to neighboring farmers, who control them without formal organization. It is not always possible to distinguish between partnership and cooperative enterprises, but as the difference is slight this is unimportant.

**Source of water supply.**—Of the terms used in the classification according to source of water supply, none requires explanation except "reservoirs." The only reservoirs which are treated as independent sources of supply are those filled by collecting storm water or from watercourses that are ordinarily dry. When reservoirs are filled from streams or wells, the primary source is considered the source of supply.

**Acre-foot.**—The "acre-foot," used to express the capacity of reservoirs, is the volume of water required to cover 1 acre to a depth of 1 foot, or 43,560 cubic feet.

**Cost.**—The cost of irrigation enterprises is that given by the owners. For the larger works the cost given is taken, in most cases, from the books of account and represents the actual cost. In the case of most of the private and partnership and many of the cooperative enterprises, however, the works were built by their owners without records of money or labor expended, and the cost given represents the owners' estimates. The cost reported for 1910 includes the cost of construction and of acquiring rights. The latter usually consists of filing fees only. In some instances it includes the purchase price of rights, but these cases are so rare that they are unimportant. The cost reported for 1899 is designated "cost of construction," but probably includes the cost of acquiring rights, as in 1910. The average cost per acre is based on the acreage enterprises were capable of irrigating in 1910 and the cost to July 1, 1910.

## IRRIGATION AND IRRIGATED LAND.

The greater part of the state of Texas lies within the Great Plains, although there are some broken mountainous areas in the southwest and extensive swamp lands along the Gulf coast. In the eastern part of the state the rainfall is usually sufficient for growing crops, and throughout most of the remaining area the rainfall, though often deficient, is in most years sufficient for some crops. The normal annual precipitation ranges from about 50 inches at the eastern boundary to about 10 inches in the extreme western part of the state.

Partly because irrigation is not necessary in every year, and partly because of the proximity of the lands which require no irrigation, the practice of irrigation has as yet been less developed in this state than in the states farther to the west.

Irrigation is practiced to some extent in most sections of the state, but except in connection

with rice growing, is most common in the valleys of the Rio Grande, Pecos, and Nueces rivers, about 50 per cent of the total acreage irrigated in 1909, exclusive of that in rice, being situated in the valley of the Rio Grande. In the southeastern part of the state, along the Gulf coast, about 287,000 acres were irrigated for rice growing in 1909. Data for such irrigation are given at the close of this chapter.

The following table shows for the state as a whole the number of farms and acreage irrigated in 1909, exclusive of irrigation for rice growing, in comparison with the total number of farms, the total land area, the total land in farms, and the total acreage of improved land in farms in 1910, together with the areas not yet irrigated for which water has been or is being made available. Comparative figures for the census of 1900 are included as far as possible.

	CENSUS OF—		INCREASE. <sup>1</sup>

Excess of acreage enterprises were capable of irrigating in 1910 over acreage irrigated in 1909.....	176,358			
Excess of acreage included in projects over acreage irrigated in 1909.....	589,416			

<sup>1</sup> A minus sign (—) denotes decrease.

<sup>2</sup> In 1899, exclusive of irrigation for rice growing.

\* April 15.

\* July 1.

\* June 1.

\* Not reported.

<sup>4</sup> In 1909, exclusive of irrigation for rice growing.

<sup>5</sup> Less than one-tenth of 1 per cent.

**Number of farms irrigated.**—According to the figures given in the table, irrigation for purposes other than rice growing was practiced on only 1 per cent of the farms of the state in 1909. In 1899 the proportion was still smaller, 0.4 per cent. It is evident, therefore, that in the state as a whole irrigation has not up to the present time been an important factor in agriculture.

In three counties, Ward, El Paso, and Dimmit, more than half the farms are irrigated, the percentages being 77.1, 66.7, and 61, respectively. In two counties, Cameron and Hidalgo, the proportion is between 40 and 50 per cent; in two, Irion and Valverde, it is between 30 and 40 per cent; and in five between 20 and 30 per cent.

From 1899 to 1909 the increase in the number of farms irrigated, exclusive of those planted in rice, was 231.5 per cent for the state as a whole.

**Acreage irrigated.**—The total acreage reported as irrigated in 1909, exclusive of that in rice, was 164,283, as against 40,952 in 1899 and 18,241 in 1889. The percentage of increase from 1889 to 1899 was 124.5, while from 1899 to 1909 it was 301.2.

The percentage of increase between 1899 and 1909 in the acreage irrigated was considerably higher than the percentage of increase in the number of farms irrigated, the acreage irrigated per farm increasing from 32.7 in 1899 to 39.6 in 1909. This increase in the acreage irrigated per farm is probably due to the abandonment of irrigation on small tracts in the central and eastern parts of the state and the extension of irrigation in the western part of the state, where much larger areas are irrigated per farm.

In neither 1899 nor 1909 was as much as one-tenth of 1 per cent of the total land area of the state under irrigation, outside of the area in rice. In 1909 the

irrigated acreage formed slightly more than one-tenth of 1 per cent of the land in farms, but in 1899 the proportion was considerably below this. The ratio of the irrigated land to the improved land in farms increased from 0.2 per cent to 0.6 per cent during the decade.

In 1899 El Paso County had more land under ditch than any other county in the state, about 30,000 acres, but owing to shortage of water only 4,826 acres were actually irrigated, an area which was exceeded by the irrigated acreage of Reeves County, 6,757 acres. In 1909 Cameron County, at the lower end of the Rio Grande, contained the largest area of irrigated land, 29,439 acres, and El Paso County the second largest, 23,308 acres. One other county, Hidalgo, had an irrigated area of more than 20,000 acres in 1909, while in two the irrigated acreage was between 10,000 and 20,000.

The counties in which the irrigated land formed the highest percentage of the total land area were Ward and Cameron, the proportion being 3.1 per cent in the former and 1.9 per cent in the latter.

**Acreage included in projects.**—The foregoing table shows that in 1910 existing enterprises were ready to supply water to 340,641 acres, or 176,358 acres more than were irrigated in 1909. It is probable that after allowance is made for an increase in the area irrigated in 1910 over that irrigated in 1909 there remained at the close of 1910 under ditch but not irrigated considerably more land than was brought under irrigation in the 10 years from 1899 to 1909, and about as much as was irrigated in 1909. The acreage included in projects exceeds the acreage irrigated in 1909 by 589,416 acres, which is nearly five times the acreage brought under irrigation in the last decade and more than three times the entire acreage irrigated in 1909. This acreage represents the area which will be available for the extension of irrigation in the next few years upon the completion of existing enterprises and without new undertakings.

**Acreage irrigated, classified by character of enterprise.**—The following table gives the distribution of the acreage irrigated for purposes other than rice growing in 1909, according to the character of the enterprise controlling the irrigation works:

CHARACTER OF ENTERPRISE.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribu- tion.
<b>All classes.....</b>	<b>164,283</b>	<b>100.0</b>
Cooperative enterprises.....	41,186	25.1
Commercial enterprises.....	73,440	44.7
Individual and partnership enterprises.....	49,657	30.2

In Texas no land is irrigated by the United States Reclamation Service or by the United States Indian Service. The Carey Act does not apply to this state, and no irrigation districts had been organized in 1909.

Cooperative enterprises and individual and partnership enterprises, both of which classes are controlled by the water users, supplied about 55 per cent of the total acreage irrigated in 1909, while commercial enterprises controlled the water supply for the remainder of the land irrigated. Some of the latter enterprises, however, supply water under contracts providing that the works shall become the property of the water users when the water rights sold are paid for.

**Acreage irrigated, classified by source of water supply.**—The following table shows the distribution of the acreage irrigated, exclusive of that in rice, in 1909, according to the source of water supply:

SOURCE OF SUPPLY.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribu- tion.
<b>All sources.....</b>	<b>164,283</b>	<b>100.0</b>
Streams.....	134,692	82.0
Lakes.....	458	0.3
Wells.....	9,862	6.0
Springs.....	13,068	8.0
Reservoirs.....	6,203	3.8

While more than four-fifths of the acreage irrigated in 1909 was supplied from streams, there has been considerable utilization of other sources of supply. The state has many large springs, the water from which is being used for irrigation.

#### IRRIGATION WORKS.

The following statement summarizes the data collected relating to works for supplying water for irrigation in 1910, other than those for rice irrigation. As the report for the census of 1900 does not segregate works used for rice irrigation, no comparison with the results of that census is made.

Independent enterprises.....	number.....	2,161
Ditches, total length.....	miles.....	1,663
<b>Main ditches.....</b>	<b>number.....</b>	<b>636</b>
Length.....	miles.....	941
Capacity.....	cubic feet per second.....	12,818
<b>Lateral ditches.....</b>	<b>number.....</b>	<b>616</b>
Length.....	miles.....	722
Reservoirs.....	number.....	288
Capacity.....	acre-feet.....	72,051
Flowing wells.....	number.....	122
Capacity.....	gallons per minute.....	36,939
Pumped wells.....	number.....	1,412
Capacity.....	gallons per minute.....	121,631
Pumping plants.....	number.....	1,784
Engine capacity.....	horsepower.....	20,915
Pump capacity.....	gallons per minute.....	1,455,285

Assuming that the enterprises in operation in 1909 were identical with those reported in 1910, the average acreage irrigated per enterprise was 76, and the acreage irrigated per mile of main ditch was 174.6.

As shown by the table, there has been considerable utilization of underground water for irrigation in Texas, 122 flowing wells and 1,412 pumped wells being reported. The area irrigated from wells in 1909 was 9,862 acres, or 6 per cent of the total irrigated acreage of the state, exclusive of that irrigated for rice growing.

Pumping for irrigation is common, 40 per cent of the acreage irrigated in 1909, other than that in rice, being supplied with pumped water. About two-thirds of the area thus supplied is along the lower Rio Grande in Cameron and Hidalgo Counties.

**Cost of construction, operation, and maintenance.**—The following table presents statistics in regard to the cost of construction, operation, and maintenance of irrigation enterprises:

	CENSUS OF—	
	1910	1900
Cost of irrigation enterprises.....	\$7,346,708 <sup>1</sup>	\$705,608 <sup>2</sup>
Average per acre.....	\$21.57 <sup>3</sup>	\$17.23 <sup>4</sup>
Estimated final cost of existing enterprises.....	\$8,613,533	(5)
Average per acre included in projects.....	\$11.43	(5)
Operation and maintenance:		
Acreage for which cost is reported.....	109,697	(5)
Total cost reported.....	\$356,260 <sup>5</sup>	(5)
Average cost per acre.....	\$3.25	(5)

<sup>1</sup> Reported July 1.

<sup>2</sup> Cost of construction of systems operated in 1899, exclusive of estimated cost for those operated in connection with rice growing.

<sup>3</sup> Based on acreage enterprises were capable of irrigating in 1910.

<sup>4</sup> Based on acreage irrigated in 1899.

<sup>5</sup> Not reported.

<sup>6</sup> For 1909.

The cost of the irrigation systems operated in 1899, exclusive of those operated in connection with rice culture, was \$705,608. The corresponding cost in 1910 was \$7,346,708, or more than 10 times as great, and the average cost per acre likewise shows some increase, though much less in degree. The average cost per acre shown for the census of 1910 is based on the acreage enterprises were capable of irrigating in that year; but since the corresponding acreage for 1900 was not reported, the figure for average cost at the earlier census is based on the acreage actually irrigated in 1899. If computed on the basis of the acreage irrigated in 1909, the average cost in 1910 would be \$44.72, representing an increase of 159.5 per cent over the figure given for average cost at the census of 1900.

Of the counties for which separate figures are given in the table, the one showing the lowest average cost per acre enterprises were capable of irrigating in 1910, \$1.76, is Loving. The highest average cost per acre, \$57.44, is in Comal County. Since, however, neither of these counties has a large irrigated acreage, these extremes do not materially affect the average for the state.

The acreage for which cost of operation and maintenance in 1909 was reported constitutes 66.8 per cent of the total acreage reported as irrigated in 1909, and 95.7 per cent of the acreage reported as irrigated by other than individual and partnership enterprises. The cost reported can be said, therefore, to represent fairly the average annual expense for all but individual and partnership enterprises.

#### CROPS.

The next table shows the acreage, yield, and value of the principal crops reported as grown under irrigation in 1909, except rice.

CROP.	IRRIGATED CROPS: 1909			
	Acreage.	Yield.		Value.
		Unit.	Amount.	
<b>Cereals:</b>				
Corn.....	9,068	Bu....	191,474	21.1 \$162,467
Oats.....	2,496	Bu....	60,015	24.0 38,668
Wheat.....	1,386	Bu....	28,681	19.3 23,408
Kafir corn and milo maize.....	1,154	Bu....	29,449	25.5 19,612
<b>Hay and forage:</b>				
Alfalfa.....	13,778	Tons..	43,771	3.18 598,911
Other tame or cultivated grasses.....	5,009	Tons..	6,655	1.33 80,460
Wild, salt, or prairie grasses.....	593	Tons..	773	1.30 10,743
Coarse forage.....	4,651	Tons..	14,108	3.03 153,626
<b>Sundry crops:</b>				
Cotton.....	7,474	Bales..	2,299	0.31 143,157
Sugar cane.....	1,759	Tons..	36,665	20.84 90,170
Potatoes.....	961	Bu....	90,089	93.7 81,052
Onions.....	1,842			297.40
Cabbages.....	1,416			143,671
Other vegetables.....	4,178			646,651

<sup>1</sup> Includes millet.

In addition 531 acres in orchards not bearing were irrigated, but no single crop other than those shown in the table covered an irrigated area of 500 acres.

**Acreage.**—The crop most extensively grown on irrigated land is alfalfa, its acreage representing 24.7 per cent of the total for the irrigated crops given. Corn is next, with 16.3 per cent of this total, and is followed by cotton, with 13.4 per cent. The greater part of the irrigated cotton acreage is in Cameron and Ward Counties.

The area devoted to the raising of vegetables under irrigation in 1909 amounted to 8,397 acres, comprising 1,842 acres of onions, 1,416 acres of cabbages, 961 acres of potatoes, and 4,178 acres of other vegetables. Of the irrigated land in onions, more than two-thirds was in La Salle, Hidalgo, Cameron, and Dimmit Counties; of that in cabbages more than 94 per cent was in Cameron and Hidalgo Counties; and of that in potatoes about 43 per cent was in Bexar County. Other vegetables were grown on a commercial scale by means of irrigation in Webb, Cameron, Hidalgo, Bexar, and El Paso Counties.

#### COUNTY TABLE.

The next table gives in detail, for the state and principal counties, the data summarized in this section, except those relating to crops.

**Change in boundaries.**—In comparing the data secured in 1910 with those for the preceding census, it should be borne in mind that a part of Tom Green County was taken to form Reagan County in 1903, and a part of Pecos County was taken to form Terrell County in 1905.

**Land in farms in specified counties.**—In accordance with the instructions to enumerators to assign all of the acreage of a farm to the county in which the residence of the operator was located, large acreages in adjoining counties have been tabulated as in Nueces and Tom Green Counties.

## IRRIGATION FOR RICE GROWING.

The following text and tables present the statistics of irrigation for rice growing in Texas obtained in connection with the Thirteenth Census.

Such of the terms used as are not self-explanatory, and which were not explained at the opening of this chapter, are defined below.

**Number of farms reporting irrigation.**—The number of farms reporting irrigation for rice growing is obtained from the supplemental schedules filled out by the regular enumerators. This number is believed to be somewhat less than the number of farms actually irrigated for rice growing in the year preceding the census, owing to the fact that rice is grown on the same land only a few years in succession, when the land becomes foul and is not cropped for a few years. In this way it happens that on many of the farms on which rice is grown one year there are no farmers the succeeding year. It is probable that a considerable number of farms on which rice was grown in 1909 were unoccupied in 1910, and consequently not reported by the farm enumerators.

**Acreage irrigated.**—The acreage irrigated for rice growing is taken from special schedules filled out by agents from information secured from owners or officials of irrigation enterprises. The acreage thus obtained is considerably larger than the acreage of irrigated rice reported on the supplemental schedules filled out by the farm enumerators. The difference is due principally to the temporarily unoccupied farms on which land that had been irrigated in 1909 was not cropped in 1910, and the fact that the special schedules report all acreage watered, while the supplemental schedules give only the acreage harvested. A considerable acreage planted in rice in 1909 was not harvested, owing to poor stand, shortage of water, and damage by storms. Much of this was reported as watered, but obviously would not appear in the returns of acreage harvested.

**Control of irrigation works and contracts for supplying water.**—The sale of water rights, common in the arid region, is practically unknown in the rice districts. The larger enterprises supplying water for rice production are strictly commercial concerns in which the rice growers have no ownership, while most of the smaller enterprises are controlled by individual farmers.

In the cases where water is furnished by commercial enterprises, annual or limited term contracts are used, which are grouped in the four classes named below. The acreage irrigated in 1909, as well as the acreage enterprises were capable of irrigating in 1910 and that included in projects, has been classified according to the control of the works and the kind of contract used. In instances where an enterprise uses more than one form of contract, the acreages have been assigned to the class of contract under which the largest part appears to have been irrigated. The classes of contracts used are as follows:

*Share crop rental for water*, under which the canal owners receive a share of crops grown, usually one-fifth.

*Fixed crop rental for water*, under which the canal owners receive a fixed quantity of rough rice, usually 2 bags per acre irrigated.

*Cash rental for water*, under which the canal owners receive a fixed amount of cash, ranging from \$6 to \$9 per acre per year.

*Share crop rental for land, seed, and water*, under which the canal owners receive a share of the crop, usually one-half, and supply land, seed, and water.

**Sources of water supply.**—Most of the terms used in the classification of the irrigated acreage according to source of water supply do not require explanation. The land supplied by siphons, and by pumping and siphons, lies along the Mississippi River, and at some stages of the stream is below the level of the water in the river. Siphons are placed over the levees, and water for the irrigation of rice is drawn through these. When the water in the river is too low to flow through the siphons, small reservoirs are built far enough up on the river side of the levees to make it possible for the water to be siphoned to the rice fields. Water is pumped into these reservoirs, and from them drawn through the siphons. The only reservoirs used for rice irrigation, and classified as independent sources of supply, are those that catch drainage water from higher lands and distribute it to lower lands.

**Cost.**—As most of the works have been installed within the last few years, and the principal part of the equipment consists of pumping machinery which has been purchased, it is probable that the cost given is approximately accurate. The cost reported for the census of 1910 is that up to July 1, 1910.

## FARMS AND ACREAGE IRRIGATED.

The following table shows the number of farms reporting irrigation for rice growing in Texas in 1909, and the acreage irrigated in comparison with the number of farms, the land area, the land in farms,

and the acreage of improved land in farms in 1910, together with the areas not yet irrigated for which water has been or is being made available. Comparative data for 1900 are included as far as possible.

	CENSUS OF—		INCREASE. <sup>1</sup>	
	1910	1900	Amount.	Per cent.

<sup>5</sup> In 1899.  
<sup>6</sup> July 1.

<sup>7</sup> Not reported.  
<sup>8</sup> Less than one-tenth of 1 per cent.

The rice growing district of Texas extends along the Gulf coast from the Sabine River on the east to the Colorado River on the west, and into the interior for distances ranging from 40 to 100 miles. The irrigation of rice on a large scale in this territory began about 1900, only 8,700 acres of irrigated rice being reported for the state for 1899. Conditions in this section are substantially the same as in the neighboring rice districts in Louisiana, except that development is more recent and the newer lands produce better crops. As in southwest Louisiana, most of the water is pumped from streams to the flat prairie lands adjoining.

**Number of farms reporting irrigation for rice growing.**—Irrigation for rice growing in 1909 was reported by only 0.3 per cent of the farms of the state. The number of farms reporting such irrigation in 1899 was 73, or less than one-tenth of 1 per cent of the total number of farms in the state.

The only county in which as many as one-fourth of the farms reported irrigation for rice growing in 1909 was Jefferson, where the percentage was 27.3. The proportions in Matagorda, Orange, and Chambers Counties are 19, 18.3, and 16.7 per cent, respectively. Wharton County, in which 10.6 per cent of all farms reported irrigation for rice growing in 1909, was the only county, other than those named, in which the proportion was as high as 10 per cent.

**Acreage irrigated.**—The total acreage reported as irrigated for rice growing in 1909 was 286,847, as against 8,700 in 1899, almost the entire development of the rice growing industry in Texas having taken place since the census of 1900.

The percentage of the total land area of the state in irrigated rice in 1909 was 0.2, and the percentage that this irrigated acreage represented of all land in farms was 0.3, while the percentage which it represented of all improved land in farms in the state was 1.

Jefferson County had the largest area in irrigated rice in both 1899 and 1909, the acreage being 5,859 and 75,983 at the respective censuses. In 1899 Orange County contained nearly all of the remaining acreage, but in 1909 six counties exceeded Orange in this respect.

Two counties besides Jefferson had more than 50,000 acres each in irrigated rice—Matagorda, with 60,834, and Wharton, with 53,930; two others, Chambers and Harris, more than 25,000 acres each (27,375 and 25,795, respectively); and the remaining county, Jackson, 11,167 acres. With the exception of Orange County, with 10,515 acres, no county other than those named in the preceding section contained as many as 10,000 acres in irrigated rice.

**Acreage included in projects.**—The foregoing table shows that in 1910 existing enterprises were ready to supply water to 350,350 acres, or 63,503 acres more

than were irrigated in 1909. The total acreage included in projects exceeds the acreage irrigated in 1909 by 212,627 acres, which is equal to more than three-fourths of the increase in acreage irrigated for rice growing in the last decade and nearly three-fourths of the total area irrigated for that purpose in 1909. This acreage represents the area which will be available for the extension of rice irrigation within the next few years, upon the complete utilization of existing enterprises and without new undertakings.

**Acreage irrigated, classified by control of works and kind of contract used.**—The next table gives the distribution of the acreage irrigated for rice growing in 1909, according to control of the works furnishing the water and the character of the contract for supplying water.

The table shows that 31 per cent of the acreage irrigated for rice growing in 1909 was supplied with water by irrigation works belonging to the farmers and that the remainder of the acreage was supplied under contracts. Of the latter acreage by far the greater part, amounting to about 50 per cent of the entire acreage irrigated for rice growing, was supplied for fixed rentals, about half (26.7 per cent of the total) receiving water on a cash basis and about half (23.8 per cent of the total) on the basis of the payment of a fixed quantity of the crop. Cash rentals range from \$6 to \$9 per acre per year, while fixed crop rentals are usually about 2 sacks or 8 bushels of rough rice per acre. About 19 per cent of the acreage irrigated for rice growing was supplied on a share crop basis, 9.5 per cent under contracts providing for a share crop rental for water alone (usually one-fifth of the crop) and 9 per cent on the basis of a share crop rental for land, seed, and water (usually one-half of the crop). There is a general effort on the part of canal owners to put on a cash rental basis the entire acreage served by them, and it is probable that this system will become more common.

CONTROL OF WORKS AND KIND OF CONTRACT.	ACREAGE IRRIGATED FOR RICE GROWING IN 1909.	
	Amount.	Per cent distribution.
<b>All classes.</b> .....	<b>286,847</b>	<b>100.0</b>
Works controlled by water users.....	88,825	31.0
Works supplying water under contract.....	198,022	69.0
Share crop rental for water.....	27,154	9.5
Fixed crop rental for water.....	68,362	23.8
Cash rental for water.....	76,706	26.7
Share crop rental for land, seed, and water.....	25,800	9.0

**Acreage irrigated, classified by source of water supply.**—The next table shows the distribution of the acreage irrigated for rice growing in 1909 according to the source of water supply.

SOURCE OF WATER SUPPLY.	ACREAGE IRRIGATED FOR RICE GROWING IN 1909.	
	Amount.	Per cent distribu- tion.
All sources.....	286,847	100.0
Streams (by pumping).....	238,382	83.1
Wells.....	47,920	16.7
Flowing.....	20	(1)
By pumping.....	47,900	16.7
Reservoirs.....	545	0.2

<sup>1</sup> Less than one-tenth of 1 per cent.

The table shows that practically all of the water used for the irrigation of rice in Texas is pumped, and that the greater part of it is pumped from streams, 83.1 per cent of the total acreage irrigated for rice growing in 1909 being supplied with water from streams, and 16.7 per cent from wells. Small areas received water from reservoirs and flowing wells.

#### IRRIGATION WORKS.

The next table summarizes the data collected in 1910 relating to works for supplying water for the irrigation of rice. Since no separate figures as to works supplying water for rice growing are available from the Twelfth Census, there is no opportunity for comparisons between the two censuses.

Independent enterprises.....	number..	611
Ditches, total length.....	miles..	1,040
Main ditches.....	number..	225
Length.....	miles..	111
Lateral ditches.....	number..	111
Length.....	miles..	722
Reservoirs.....	number..	21
Capacity.....	acre-feet..	2,310
Flowing wells.....	number..	1
Capacity.....	gallons per minute..	10
Pumped wells.....	number..	500
Capacity.....	gallons per minute..	445,495
Pumping plants.....	number..	575
Engine capacity.....	horsepower..	48,179
Pump capacity.....	gallons per minute..	3,907,380

Assuming that the enterprises in operation in 1909 were identical with those reported in 1910, the average acreage irrigated per enterprise in 1909 was 469.5, and the acreage irrigated per mile of main ditch was 533.2.

#### COST.

The following statement presents statistics in regard to the cost of construction of irrigation enterprises conducted in connection with rice growing. Separate figures as to the cost of enterprises operated for the irrigation of rice in 1899 are not available, but this cost has been estimated at \$322,000.

Cost of enterprises up to July 1, 1910.....	\$6,140,639
Average cost per acre enterprises were capable of irrigating in 1910.....	17.53
Estimated final cost of existing enterprises.....	6,140,639
Average per acre included in projects.....	12.29

As the rice growing industry in Texas has developed almost entirely since 1900, comparisons would be of little value if figures were available. The average cost per acre in Texas is considerably higher than that in Louisiana.

The lowest average cost per acre, \$13.03, is shown for Jefferson County, while the highest, \$43.01, was reported for Fort Bend County.

#### IRRIGATED CROP.

As previously stated, the data available as to irrigated crops are not complete. For irrigated rice the average yield reported was 38.7 bushels per acre, and the average value \$28.54 per acre. The average yield and average value in Texas are higher than those in Louisiana, considered as a whole, but not so high as those in the river districts of Louisiana. The cost of water is also higher in Texas than in Louisiana.

#### COUNTY TABLE.

The data summarized in this section, except those relating to the crop, are shown in detail, by counties, in the next table.

*Land in farms in specified counties.*—Following the instructions to enumerators to assign all of the acreage of a farm to the county in which the residence of the operator is located, large acreages belonging to adjoining counties have been tabulated as in Jackson County.

## CHAPTER 5.

# STATISTICS OF MANUFACTURES FOR THE STATE, CITIES, AND INDUSTRIES.

**Introduction.**—This chapter gives the statistics of manufactures for the state of Texas for the calendar year 1909, as shown by the Thirteenth Census.

The text summarizes the general results of the census inquiry, presenting a series of special tables in which the main facts printed in the general tables are given in convenient form for the state as a whole and for important industries. It also presents tables in which the statistics for the industries of the state as a whole and for a few important industries are classified by character of ownership, size of establishments, number of wage earners, and prevailing hours of labor, information which could not be presented in general tables for each industry without disclosing the facts for individual establishments.

At the end of the chapter are three general tables.

Table I gives for 1909, 1904, and 1899 the number of establishments and of persons engaged in the industries, primary power, capital, salaries and wages, cost of materials, value of products, and value added by manufacture reported for all industries combined and for certain important industries (1) for the state as a whole and (2) for the cities of San Antonio, Dallas, Houston, and Fort Worth. It also gives the same items for all industries combined for every city and town having in 1910 a population of over 10,000 but less than 50,000.

Table II gives statistics in detail for 1909 for the state and for a larger number of industries.

Table III gives statistics in detail for 1909 for Dallas, Fort Worth, Houston, and San Antonio for all industries combined and selected industries, and for each city having from 10,000 to 50,000 inhabitants for all industries combined.

**Scope of census: Factory industries.**—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of organization, location of establishments, size of establishments, labor force, and similar subjects. When use is made of the data for these purposes it is imperative that due attention should be given to the limitations of the figures. Particularly is this true when the attempt is made to derive from them figures purporting to show average wages, cost of production, or profits. These limitations will be fully discussed in the general report on manufactures for the United States as a whole.

The census of 1909, like that of 1904, was confined to manufac-

turing establishments conducted under the factory system, as distinguished from the neighborhood, hand, and building industries. Where statistics for 1899 are given they have been reduced to a comparable basis by eliminating the latter classes of industries. The census does not include establishments which were idle during the entire year, or had a value of products of less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions, or in governmental establishments, except those of the Federal Government.

**Period covered.**—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for establishments which began or discontinued business during the year.

**The establishment.**—The term "establishment" comprises the factories, mills, or plants which are under a common ownership or control, and for which one set of books of account is kept.

If, however, the plants constituting an establishment as thus defined were not all located within the same city or state, separate reports were secured in order that the separate totals might be included in the statistics for each city or state. In some instances separate reports were secured for different industries carried on in the same establishment.

**Classification by industries.**—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products very different from those covered by the class designation, and, on the other hand, may not include the total product covered by this designation, because some part of this product may be made in establishments in which it is not the product of chief value.

**Selected industries.**—The general tables at the end of this chapter give the principal facts separately for the industries of the state. A selection has been made of the leading industries of the state for more detailed consideration. Sometimes an industry of greater importance than some of those selected is omitted because it comprises so few establishments that these detailed presentations would reveal the operations of individual concerns.

**Comparisons with previous censuses.**—Owing to the changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. Table I, giving comparable figures for 1909, 1904, and 1899, therefore, does not embrace all the industries shown for 1909 in Table II.

**Influence of increased prices.**—In considering changes in cost of materials, value of products, and value added by manufacture, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures can not be taken as an exact measure of increase in the volume of business.

**Persons engaged in industry.**—At the censuses of 1909, 1904, and 1899, the following general classes of persons engaged in manufacturing industries have been distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks, and (5) wage earners. In the censuses of 1904 and 1899 these five classes were shown according to the three

main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. The second group included the three classes of salaried officers of corporations, superintendents and managers, and clerks. In the present census an entirely different grouping is employed: That into (1) proprietors and officials, (2) clerks, and (3) wage earners. The first group includes proprietors and firm members, salaried officers of corporations, and superintendents and managers.

At this census the number of persons engaged in the industries, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for December 15, or the nearest representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where conditions were exceptional, and particularly in the case of certain seasonal industries, such as canning, the December date could not be accepted as typical and an earlier date had to be chosen.

In the case of employees other than wage earners the number thus reported on December 15, or other representative day, has been treated as equivalent to the average for the year, since the number of employees of this class does not vary much from month to month in a given industry. In the case of wage earners the average is obtained in the manner explained in the next paragraph.

**Wage earners.**—In addition to the report by sex and age of the number of wage earners on December 15, or other representative day, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported each month by 12. The average thus obtained represents the number of wage earners that would be required to perform the work done if all were constantly employed during the entire year. Accordingly, the importance of any industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given for each separate industry, is not totaled for all industries combined, because in view of the variations of date such a total is believed not to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation.

In particular, totals by sex and age for the wage earners reported for the representative day would be misleading because of the undue weight given to seasonal industries, in some of which, such as canning and preserving, the distribution of the wage earners by sex and age is materially different from that in most industries of more regular operation. In order to determine as nearly as possible the sex and age distribution of the average number of wage earners in the state as a whole, the following procedure has been adopted:

The percentage distribution by sex and age of the wage earners in each industry, for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. This percentage has been applied to the average number of wage earners for the year in that industry, to determine the average number of men, women, and children employed. These calculated averages for the several industries have been added up to give the average distribution for the state as a whole.

In 1899 and 1904 the schedule called for the average number of wage earners of each sex 16 years and over, and the total number under 16 years of age, for each month, and these monthly statements were combined in an annual average. Comparatively few manufacturing concerns, however, keep their books in such way as to show readily the number of men, women, and children (under 16) employed each month. These monthly returns by sex and age were, in fact, largely estimates. It was believed that a more accurate and reliable sex and age distribution could be secured by taking as a basis of estimate the actual numbers employed on a single day.

**Prevailing hours of labor.**—The census made no attempt to ascertain the number of employees working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one period to another are disregarded, and no attention is given to the fact that a limited number of employees may have hours differing from those of the majority. In the tables all the wage earners of each establishment are counted in the class within which the establishment itself falls. In most establishments, however, all or practically all the employees work the same number of hours, so that these figures give a substantially correct picture of the hours of labor in manufacturing industries.

**Capital.**—For reasons stated in prior census reports, the statistics of capital secured by the census canvass are so defective as to be without value, except as indicating very general conditions. The instructions on the schedule for securing capital were as follows:

The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises.

**Materials.**—Cost of materials refers to the materials used during the year, which may be more or less than the materials purchased during the year. The term materials includes fuel, rent of power and heat, mill supplies, and containers, as well as materials forming a constituent part of the product. Fuel includes all fuel used, whether for heat, light, or power, or for the process of manufacture.

**Expenses.**—Under "Expenses" are included all items of expense incident to the year's business, except interest, whether on bonds or other forms of indebtedness, and allowances for depreciation.

**Value of products.**—The value of products for any industry includes the total value of all products manufactured in establishments whose products of chief value fall under the industry designation. The amounts given represent the selling value at the factory of all products manufactured during the year, which may differ from the value of the products sold. Amounts received for work on materials furnished by others are included.

**Value added by manufacture.**—The value of products is not a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing process carried on in the industry itself. Another part of it, and often by far the larger part, represents the value of the materials used, which have been produced by agriculture or mining or by other industrial establishments. For many purposes, therefore, the best measure of the importance of different classes of industry is the value created as the result of the manufacturing operations carried on within the industry. This value is obtained by deducting the cost of the materials consumed from the value of the product. The figure thus obtained is termed in the census reports "value added by manufacture."

There is a further statistical advantage which "value added" has over gross value of products. In combining the value of products for all industries the value of products produced by one establishment and used as materials in another is duplicated, and the total, therefore, gives a greatly exaggerated idea of the wealth created. No such duplication takes place in the total "value added by manufacture."

**Cost of manufacture and profits.**—Census data do not show the entire cost of manufacture, and consequently can not be used to show profits. No account has been taken of interest and depreciation. Even if the amount of profit could be determined by deducting the expenses from the value of the products, the rate of profit on the investment could not properly be calculated, because of the very defective character of the returns regarding capital.

**Primary power.**—The figures given for this item show the total of the primary power used by the establishments. They do not cover

the power developed by motors operated by such power, the inclusion of which would evidently result in duplication.

**Location of establishments.**—The Census Bureau has classified establishments by their location in cities or classes of cities. In interpreting these figures due consideration should be given to the fact that often establishments are located just outside the boundaries of cities, and are necessarily so classified, though locally they are looked upon as constituting a part of the manufacturing interests of the cities.

### INDUSTRIES IN GENERAL.

**General character of the state.**—Texas, with a gross area of 265,896 square miles, of which 3,498 represent water surface, is the largest state in the Union. Its population in 1910 was 3,896,542, as compared with 3,048,710 in 1900 and 2,235,527 in 1890. It ranked fifth among the 49 states and territories of continental United States as regards population in 1910 and sixth in 1900. The density of population for the entire state was 14.8 per square mile, the corresponding figure for 1900 being 11.6. Twenty-four and one-tenth per cent of the entire population of the state resided in incorporated cities and towns having a population of 2,500 inhabitants or over, as against 17.1 per cent in 1900.

San Antonio, with a population of 96,614; Dallas, with 92,104; Houston, with 78,800; and Fort Worth, with 73,312, were the only cities in the state which had a population in 1910 of over 50,000. There were, however, 16 cities which had a population of over 10,000 but less than 50,000. These cities, in order of their importance in population, were as follows: El Paso, Galveston, Austin, Waco, Beaumont, Laredo, Denison, Sherman, Marshall, Paris, Temple, Brownsville, Palestine, Tyler, Cleburne, and San Angelo. Apart from these cities, only 8.2 per cent of the population in 1910 resided in places of 2,500 inhabitants or over.

The transportation facilities are exceptionally good. The state is traversed by several important railway systems and, with 13,521<sup>1</sup> miles in 1909, had more steam railway trackage than any other state in the Union. Although only navigable for light-draft vessels, there are a number of streams which afford water communication for a considerable area of the eastern part of the state. Galveston, an important commercial center in the state, is one of the largest ports of entry in the South. Sabine is also a port of growing prominence. These avenues of transportation afford excellent opportunities for interstate, domestic coastwise, and foreign commerce.

**Importance and growth of manufactures.**—The manufactures of Texas depend largely for their raw materials upon the stock-raising, agricultural, and mineral products of the state and have been greatly stimulated by the rapid increase in the production of these materials. Between 1849 and 1889 there was a steady growth in manufactures, but the total value of

**Laundries.**—The census of 1909 was the first to include statistics of laundries. The reports are confined to establishments using mechanical power. The data are presented separately and are not included in the general total for manufacturing industries, in order to avoid interference with comparisons with prior censuses.

**Custom gristmills.**—In order to make the statistics for 1909 comparable with those for 1904 the data for these mills have been excluded from all the tables presenting general statistics, and are given in a separate table at the end of this chapter.

the manufactures of the state, including the products of the neighborhood and hand industries, amounted to only \$70,434,000 in the latter year, while in 1909, exclusive of the value of the products of the neighborhood and hand industries, it had reached \$272,896,000, representing an increase of nearly 300 per cent during the 20 years. The population of the state during the same period increased only 74.3 per cent. The gross value of products per capita of the total population of the state increased from \$32 in 1889 to \$70 in 1909. The number of wage earners has not increased as rapidly as the value of manufactured products. It has, however, almost exactly kept pace with the growth in population, for the 34,794 wage earners reported in 1889 and the 70,230 reported in 1909 represent 1.6 per cent and 1.8 per cent of the total population of the state at the respective censuses. The proportion which the manufactures of the state represented of the total value of the products of manufacturing industries in the United States increased from eight-tenths of 1 per cent in 1889 to 1.3 per cent in 1909. Texas ranked twenty-fourth in 1889 among the states in respect to gross value of products, but advanced to seventeenth place in 1909.

The first table on the following page gives the most important figures relative to all classes of manufactures combined for 1909, 1904, and 1899, together with the percentages of increase from census to census.

In 1909 the state of Texas had 4,588 manufacturing establishments, which gave employment to an average of 84,575 persons during the year and paid out \$48,775,000 in salaries and wages. Of the persons employed, 70,230 were wage earners. These establishments turned out products to the value of \$272,896,000, to produce which materials costing \$178,179,000 were used. The value added by manufacture was thus \$94,717,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that while the growth of the manufacturing industries of Texas, as a whole, during the five-year period 1899–1904 was noteworthy, the growth during the more recent five-year period, 1904–1909, was even more pronounced. During the later period the number of establishments increased 45.3 per cent and the average number of wage earners 43.1 per cent, while the value of products increased 81.3 per cent and the value added by manufacture 60.7 per cent.

<sup>1</sup> Report of Interstate Commerce Commission, 1909.

As pointed out in the Introduction, it would be improper to infer that manufactures increased in volume to the full extent indicated by these figures

regarding values, since the increase shown is certainly due, in part, to the increase that has taken place in the prices of commodities.

<sup>1</sup> Figures not available.

The relative importance and growth of the leading manufacturing industries of the state are shown in the following table.

It should be borne in mind, in considering this table,

that the value of products in some of the industries involves a certain amount of duplication, due to the use of the product of one establishment in the industry as material for another establishment.

INDUSTRY.	Number of establishments.	WAGE EARNERS.		VALUE OF PRODUCTS.		VALUE ADDED BY MANUFACTURE.		PER CENT OF INCREASE. <sup>1</sup>			
		Average number.	Per cent distribution.	Amount.	Per cent distribution.	Amount.	Per cent distribution.	Value of products.		Value added by manufacture.

<sup>1</sup> Percentages are based on figures in Table I; a minus sign (-) denotes decrease. Where the percentages are omitted, comparable figures can not be given.

The refining of petroleum, which ranks fifth among the industries of the state, is the most important of those included under the head of "All other industries." Eight refineries were reported at the census of 1909, as compared with seven in 1904. Of the

number reported for 1909, four establishments, three of which were under one corporate management, refined by far the greater part of all the oil refined in the state. For this reason the figures for this industry can not be shown without disclosing individual

operations. The industry has had a remarkable growth in the state during the past 10 years, and in 1909 Texas was the fourth state in the Union in the production of refined petroleum.

In addition to the industries presented separately in the preceding table and petroleum refining, there are six important industries each of which had a value of products in 1909 exceeding \$1,000,000. They are included under the head of "All other industries" in the table, because in some cases the operations of individual establishments would be disclosed if they were shown separately; in others, because the returns do not present properly the true condition of the industry, as it is more or less interwoven with one or more other industries; and in still others, because comparable statistics for the different census years can not be presented on account of changes in classification or the data for prior censuses are not available. These industries are as follows: Bags, other than paper; coffee and spice, roasting and grinding; mineral and soda waters; smelting and refining, copper; smelting and refining, lead; and wood preserving. For similar reasons, 30 less important industries which had a value of products in 1909 in excess of \$100,000 but less than \$1,000,000 are also included under "All other industries."

The most important industries listed in the preceding table, in which they are arranged in the order of the value of products, call for brief consideration.

*Slaughtering and meat packing.*—This classification includes the wholesale slaughtering and meat-packing establishments and those engaged in the manufacture of sausage only. Although stock raising has always been an exceedingly important industry in the state, only during the last decade has slaughtering and meat packing assumed large proportions. From a comparatively small industry in 1899, it had become the leading industry of the state in 1909 as measured by value of products.

*Flour-mill and gristmill products.*—All mills which grind wheat, rye, or buckwheat flour, or corn meal, hominy, grits, or feed are included in this industry. Factories making fancy cereals or other food preparations as a chief product are not included. Furthermore, the statistics for mills grinding exclusively for toll, usually small and operated for local consumption, are not included in this classification or in the general statistics for the state, but are shown separately on page 788.

*Lumber and timber products.*—This industry includes logging operations, the sawmills, shingle mills, planing mills, and wooden packing-box factories. From the standpoint of the number of wage earners, this is the most important industry in the state, the average number of wage earners reported for 1909 constituting 33.5 per cent of the total employed in all manufactures in the state.

*Oil, cottonseed, and cake.*—The statistics include those for all establishments engaged primarily in

extracting oil from cotton seed or refining crude cottonseed oil. Prior to 1870 cotton seed was considered practically worthless, except for planting, and it was not until after 1880 that it came to be extensively utilized in the United States. Texas, the leading cotton-producing state, has naturally become also the leading state in the manufacture of cottonseed products, which position it has held since 1889. In 1909 it contributed 20.2 per cent of the total value of cottonseed products reported for the United States. The percentage of increase in value added by manufacture from 1904 to 1909 was much greater than the percentage of increase in value of products, although both increases were large.

*Cars and general shop construction and repairs by steam-railroad companies.*—This industry represents the work done in the car shops of steam-railroad companies, and is confined practically to repairs of the rolling stock and equipment of their own roads, although to a limited extent there may be some new construction of rolling stock. The statistics are exclusive of minor repairs in roundhouses. Judged by the number of wage earners employed, this was the second industry in the state in 1909.

*Printing and publishing.*—All establishments engaged primarily in printing and publishing newspapers, books, periodicals, and music, job printing, bookbinding and blank-book making, lithographing, and engraving are included under this head. More establishments were reported for this industry in 1909 than for any other manufacturing industry in the state.

*Rice, cleaning and polishing.*—This is a comparatively new industry in the state and its growth has been remarkable. The first establishment was reported for the state in 1899, but in 1904, 17 establishments were in operation and the products were valued at \$4,640,000. With an increase during the next five years of 75.5 per cent in value of products, Texas became the second state in the Union in this industry.

Measured by value added by manufacture, all but one of these seven industries hold a somewhat different rank from that which they hold when measured by value of products. On account of the comparatively simple processes involved in slaughtering and meat packing, in the flour-mill and gristmill industry, and in cleaning and polishing rice, and the extent to which the work is carried on by machinery in the last two industries, the value added by manufacture is not commensurate with the value of products. For these reasons the slaughtering and meat-packing industry, which is first in value of products, becomes fifth in importance on the basis of value added by manufacture, the flour-mill and gristmill industry drops from second to eighth place, and the cleaning and polishing of rice from seventh to sixteenth place, while the lumber industry would stand first, printing and publishing second, steam-railroad repair shops third, and the cottonseed-oil industry fourth. Similar changes would occur in the relative standing of many of the other industries.

The table on page 774 shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture where the figures are comparable. For the five-year period 1904-1909 the manufacture of food preparations shows a greater rate of increase in value of products, and that of butter, cheese, and condensed milk a greater relative gain in value added by manufacture, than any of the other specified industries, namely, 1,294.4 per cent and 828.6 per cent, respectively. The remarkable increase in the former industry was due in a large measure to the increased production of establishments manufacturing lard compound, and of those making macaroni, and in the latter industry almost entirely to the decided gain of those which manufacture butter. The furniture and refrigerator and the slaughtering and meat-packing industries also show remarkable increases in both items. As the latter is the leading industry in the state, the percentages of increase, although not so great as those shown for most of the other three industries mentioned above, are the most significant. There are some striking differences among the several industries specified as respects the relative increase for the two five-year periods covered by the table. Of the first 20 industries presented separately, however, all show an increase for each period in value of products, and all but two an increase in value added by manufacture.

**Persons engaged in manufacturing industries.**—The following table shows, for 1909, the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

CLASS.	PERSONS ENGAGED IN MANUFACTURES.		
	Total.	Male.	Female.
<b>All classes.....</b>	<b>84,575</b>	<b>79,696</b>	<b>4,879</b>
Proprietors and officials.....	7,911	7,763	148
Proprietors and firm members.....	4,496	4,373	123
Salaried officers of corporations.....	940	929	11
Superintendents and managers.....	2,475	2,461	14
Clerks.....	6,434	5,808	626
Wage earners (average number).....	70,230	66,125	4,105
16 years of age and over.....	68,974	65,092	3,882
Under 16 years of age.....	1,256	1,033	223

The average number of persons engaged in manufactures during 1909 was 84,575, of whom 70,230 were wage earners. Of the remainder, 7,911 were proprietors and officials and 6,434 were clerks. Corresponding figures for individual industries will be found in Table II, page 794.

The following table shows, for 1909, the percentage of proprietors and officials, clerks, and wage earners, respectively, among the total number of persons employed in manufactures. It covers all industries combined and 15 important industries individually.

INDUSTRY.	PERSONS ENGAGED IN MANUFACTURES.			
	Total number.	Per cent of total.		
		Proprietors and officials.	Clerks.	Wage earners (average number).
<b>All industries.....</b>	<b>84,575</b>	<b>9.4</b>	<b>7.6</b>	<b>83.0</b>
Bread and other bakery products.....	2,078	22.8	10.3	66.9
Brick and tile.....	2,135	6.8	2.5	90.6
Cars and general shop construction and repairs by steam-railroad companies.....	10,527	2.6	4.4	92.9
Cotton goods, including cotton small wares.....	1,633	1.5	1.2	97.4
Flour-mill and gristmill products.....	1,899	10.9	16.1	64.0
Food preparations.....	367	10.6	12.0	77.4
Foundry and machine-shop products.....	3,441	8.3	6.7	85.0
Ice, manufactured.....	1,874	15.9	8.3	76.7
Leather goods.....	1,012	12.4	16.4	71.2
Liquors, malt.....	931	5.8	12.0	82.2
Lumber and timber products.....	25,843	6.1	2.9	91.0
Oil, cottonseed, and cake.....	3,923	12.6	9.0	78.3
Printing and publishing.....	7,177	22.1	16.5	61.4
Rice, cleaning and polishing.....	643	11.4	21.8	66.9
Slaughtering and meat packing.....	4,248	1.0	13.3	85.7
All other industries.....	16,844	12.2	9.9	77.9

Of the total number of persons engaged in all manufacturing industries, 9.4 per cent were proprietors and officials, 7.6 per cent clerks, and 83 per cent wage earners. In the bakery, the printing and publishing, and the flour-mill and gristmill industries, the majority of the establishments are small and the work is done to a large extent by the proprietors or their immediate representatives, so that the proportion of persons engaged in these industries falling into the class of proprietors and officials is therefore much greater than for most other industries or for all industries combined. Similar conditions prevail, but to a less degree, in the manufactured-ice and the leather-goods industries, and also in the manufacture of cottonseed products, although in the latter industry the establishments are somewhat larger. The smallest proportions for this class are shown for the slaughtering and meat-packing and the cotton-goods industries, on account of the large average number of wage earners to an individual establishment, and because all of the establishments in the latter and all but two in the former industry are under corporate ownership.

The table following shows, for 1909, in percentages, for all industries combined the distribution of the average number of wage earners by age periods, and for those 16 years of age and over by sex, calculated in the manner described in the Introduction. It also shows, for some of the important industries separately, a similar distribution of wage earners as reported for December 15, or the nearest representative day. As a means of judging the importance of the several industries the average number employed for the year is also given in each case.

INDUSTRY.	WAGE EARNERS.			
	Average number. <sup>1</sup>	Per cent of total.		
		16 years of age and over.		Under 16 years of age.
		Male.	Female.	
All industries.....	70,230	92.7	5.5	1.8
Bread and other bakery products.....	1,391	71.2	25.7	3.0
Brick and tile.....	1,935	97.6		2.4
Cars and general shop construction and repairs by steam-railroad companies.....	9,782	99.9	( <sup>2</sup> )	( <sup>2</sup> )
Cotton goods, including cotton small wares.....	1,590	53.1	32.7	14.2
Flour-mill and gristmill products.....	1,216	99.3	0.2	0.4

Printing and publishing.....	4,408	80.3	13.9	5.8
Rice, cleaning and polishing.....	430	100.0		
Slaughtering and meat packing.....	3,639	91.7	6.4	1.9
All other industries.....	13,116	82.6	15.4	2.0

<sup>1</sup> For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

<sup>2</sup> Less than one-tenth of 1 per cent.

For all industries combined, 92.7 per cent of the average number of wage earners were males 16 years of age and over; 5.5 per cent, females 16 years of age and over; and 1.8 per cent, children under 16 years of age. The relatively small proportion of women and children employed in Texas is of interest. Of the industries shown in this table, the cotton mills, the factories engaged in the manufacture of food preparations, the bakeries, and printing and publishing establishments report the largest proportions of female wage earners. In the cotton-goods industry nearly one-third of the employees were women 16 years of age and over; in the manufacture of food preparations nearly three-tenths; in the bakeries about one-fourth; and in printing and publishing establishments nearly one-seventh. The largest actual number of female wage earners 16 years of age and over were employed in the men's clothing industry, which is included under the head of "All other industries." In this industry women formed nearly nine-tenths of the total number of wage earners. The confectionery establishments also employed a large number of female wage earners.

The largest proportions of wage earners under 16 years of age are shown for the cotton-goods and the printing and publishing industries. Although a greater actual number of wage earners under 16 years of age was reported for the lumber industry than for any other in the state, the number of wage earners of all classes shown for that industry is so large that this particular class of employees forms but a small proportion of the total shown for the industry.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See Intro-

duction.) The following table makes this comparison according to occupational status:

CLASS.	PERSONS ENGAGED IN MANUFACTURES.				
	1909		1904		Per cent of increase, 1904-1909.
	Number.	Per cent distribution.	Number.	Per cent distribution.	
Total.....	84,575	100.0	57,892	100.0	46.1
Proprietors and firm members.....	4,496	5.3	3,073	5.3	46.3
Salaried employees.....	9,849	11.6	5,753	9.9	71.2
Wage earners (average number).....	70,230	83.0	49,066	84.8	43.1

Comparable figures are not obtainable for 1899. The table shows the greatest percentage of increase to have been in the salaried employees, which is the only class forming a larger proportion of the total in 1909 than in 1904.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

CLASS.	AVERAGE NUMBER OF WAGE EARNERS.					
	1909		1904		1899	
	Number.	Percent distribution.	Number.	Percent distribution.	Number.	Percent distribution.
Total.....	70,230	100.0	49,066	100.0	38,604	100.0
16 years of age and over.....	68,974	98.2	48,245	98.3	37,688	97.6
Male.....	65,092	92.7	45,766	93.3	35,995	93.2
Female.....	3,882	5.5	2,479	5.0	1,693	4.4
Under 16 years of age.....	1,256	1.8	821	1.7	916	2.4

This table indicates that for all industries combined there has not been much change in the proportion of male and female wage earners. The proportion of children under 16 years of age was smaller in 1909 than in 1899, although slightly larger than in 1904. In 1909 males 16 years of age and over formed 92.7 per cent of all wage earners, as compared with 93.3 per cent in 1904 and 93.2 per cent in 1899.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined, for the cottonseed-oil industry, and for all other industries combined. It gives also the percentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 794, are shown for practically all of the important industries in the state the largest number and the smallest number of wage earners reported for any month. The figures are for the 15th day, or the nearest representative day, of the month.

MONTH.	WAGE EARNERS.					
	All industries.		Oil, cottonseed, and cake.		All other industries.	
	Number.	Percent of maximum.	Number.	Percent of maximum.	Number.	Percent of maximum.
January .....	68,563	90.6	4,331	75.2	64,232	91.9
February .....	66,485	87.9	3,534	61.3	62,951	90.1
March .....	68,082	90.0	2,195	38.1	65,887	94.3
April .....	67,772	89.6	1,396	24.2	66,376	95.0

In addition to that shown for the cottonseed-oil industry, there was a considerable variation in the number of wage earners employed from month to month in the sugar and molasses industry, but the numbers of wage earners reported for the industry were too small to affect materially the totals for the state. In the cottonseed-oil industry the period of greatest employment of wage earners follows closely

upon the maturity of the cotton crop. The smallest number, 932, were employed in June, from which time the number increased constantly to November, when 5,762 were employed, or 4,830 more than in June. The table indicates that, for all industries combined, the month of minimum employment was May and the month of maximum employment November. With the cottonseed-oil industry excluded, November remains the month of greatest activity, but February takes the place of May as the month of least activity, and the employment throughout the year becomes much steadier, the month of least employment showing a difference of only 6,935, or 9.9 per cent, from the month of greatest employment.

**Prevailing hours of labor.**—In the following table wage earners have been classified according to the hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year is used, and the number employed in each establishment is classified as a total according to the hours prevailing in that establishment, even though a few employees work a greater or less number of hours.

INDUSTRY.	AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.

It is evident from these figures that for the majority of wage earners employed in the manufacturing industries of Texas the prevailing hours of labor range from 54 to 60 a week, 12 per cent of the total number being employed in establishments where less than 54 hours a week prevail and 21.8 per cent in establishments where more than 60 hours a week prevail.

It will be noted that the cottonseed-oil industry is mainly on a 72-hour basis, but relatively long hours might be expected in a seasonal industry where the operations for the entire year are confined to about seven months. The prevailing hours in the cotton-goods industry are between 60 and 72 a week; in the lumber and timber products industry, 60

a week; and in the steam-railroad repair shops and the foundries and machine shops, 54 a week.

**Location of establishments.**—The following table shows to what extent the manufactures of Texas are centralized in cities of 10,000 inhabitants or over. (See

Introduction.) The comparison of the statistics is confined here, as in other states, to the years 1899 and 1909, in the absence of a Federal census of population by which the grouping of cities in 1904 could be determined.

ITEM.	Year.	Aggregate.	CITIES HAVING A POPULATION OF 10,000 AND OVER.						DISTRICTS OUTSIDE OF CITIES HAVING A POPULATION OF 10,000 AND OVER.	
			Total.		10,000 to 25,000.		25,000 to 100,000.			
			Number or amount.	Percent of total.	Number or amount.	Percent of total.	Number or amount.	Percent of total.	Number or amount.	Percent of total.
Population.....	1910	3,896,542	620,712	15.9	147,337	3.8	473,375	12.1	3,275,830	84.1
	1900	3,048,710	299,398	9.8	94,329	3.1	205,069	6.7	2,749,312	90.2
Number of establishments.....	1909	4,588	1,614	35.2	350	7.6	1,264	27.6	2,974	64.8
	1899	3,107	879	28.3	276	8.9	603	19.4	2,223	71.7
Average number of wage earners.....	1909	70,230	26,393	37.5	6,286	9.0	20,017	28.5	43,927	62.5
	1899	38,604	14,647	37.9	3,569	9.2	11,078	28.7	23,957	62.1
Value of products.....	1909	\$272,895,635	\$109,559,057	40.1	\$19,928,547	7.3	\$89,630,510	32.8	\$163,336,578	59.9
	1899	92,894,433	37,036,229	39.9	6,904,458	7.4	30,131,771	32.4	55,858,204	60.1
Value added by manufacture.....	1909	94,717,120	42,844,970	45.2	7,074,911	7.5	35,770,059	37.8	51,872,150	54.8
	1899	38,506,130	16,410,242	42.6	2,994,238	7.8	13,416,004	34.8	22,095,888	57.4

In 1909, 40.1 per cent of the total value of products was reported from cities having over 10,000 inhabitants, and 37.5 per cent of the average number of wage earners were employed in such cities. The figures indicate that during the decade the industries of the cities referred to gained slightly in value of products on those of the districts outside.

The increase in the population of different cities has affected the grouping in the table. In 1900 Austin, El Paso, and Waco were in the first group, but during the following decade the population of each increased so that in 1910 they fell into the second group. In 1900 the cities of Beaumont, Brownsville, Cleburne, Marshall, Palestine, Paris, San Angelo, Temple, and Tyler each had less than 10,000 inhabitants, and so were included in the outside districts. The total value of products reported for these nine cities in 1909 was \$13,717,717, and represented 5 per cent of the total shown for all manufactures of the state. The shifting of these cities from the outside to the city districts has therefore affected the showing in the table.

The population for 1910 and 1900 of the 20 cities which had 10,000 inhabitants or over in 1910 is given in the following statement:

CITY.	1910	1900	CITY.	1910	1900
San Antonio.....	96,614	53,321	Denison.....	13,632	11,807
Dallas.....	92,104	42,638	Sherman.....	12,412	10,243

Laredo.....	14,855	13,429	San Angelo.....	10,321	( <sup>1</sup> )

<sup>1</sup> Not incorporated in 1900.

The relative importance in manufactures of each of the 20 cities having a population of 10,000 or over in

1910 is shown in the following table, in which the value of products and average number of wage earners are shown separately for 1909, 1904, and 1899:

CITY.	AVERAGE NUMBER OF WAGE EARNERS.			VALUE OF PRODUCTS.		
	1909	1904	1899	1909	1904	1899
Dallas.....	4,882	3,445	2,842	\$26,958,664	\$15,627,668	\$9,488,252
Houston.....	5,338	5,056	3,188	23,015,556	13,564,019	7,491,971

Brownsville.....	51	( <sup>2</sup> )	( <sup>2</sup> )	120,746	( <sup>2</sup> )	( <sup>2</sup> )

<sup>1</sup> Figures do not agree with those published in 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the city.

<sup>2</sup> Figures not available.

<sup>3</sup> Not incorporated in 1900.

With the exception of Laredo, each city for which comparative figures are available shows an increase in the value of its manufactured products from 1904 to 1909, and all except Galveston (which was almost destroyed by a tidal wave in 1900) and Tyler show an increase from 1899 to 1904. Austin showed the greatest relative increase for the decade 1899-1909, namely, 272.1 per cent; Sherman was next with 220 per cent, followed by Houston with 207.2 per cent and El Paso with 199.9 per cent. Notwithstanding these decided gains the several cities held generally the same relative rank at each of the three censuses.

Dallas, the largest manufacturing center in the state, has for its leading industries, as measured by value of products, the slaughtering and meat-packing, flour-

mill and gristmill, cottonseed-products, printing and publishing, leather-goods, and foundry and machine-shop industries. Statistics for the first three industries named can not be shown separately in Table I without disclosing the operations of individual establishments. Dallas is the center of the leather-goods industry, which includes the manufacture of saddlery and harness, contributing 52 per cent of the state's total value of products for this industry.

Foremost in Houston is the cottonseed-oil industry, the value of its products forming 15.4 per cent of the total value of manufactured products for the city. Slaughtering and meat packing, the cleaning and polishing of rice, steam-railroad repair shops, and the breweries each reporting over \$2,000,000 worth of products, follow in importance in the order named. Steam-railroad repair shops is the only one of these four industries for which separate figures can be given in Table I without disclosing the operations of individual concerns.

San Antonio, although having a greater population than any other city of Texas, ranked third in the value of its manufactures in 1909. As in Dallas and Houston, the statistics for the principal industries—the breweries, flour-mills and gristmills, and the cottonseed-oil industry—can not be shown separately in Table I. The value of the malt liquors brewed in San Antonio represents nearly one-half the value of all malt liquors made in the state. Printing and publishing, slaughtering and meat packing, the manufacture of confectionery, and the steam-railroad repair shops are other leading industries, named in order of value of products.

Fort Worth is shown to be the fourth city in value of products. It should be stated, however, that just outside the corporate limits of the city are located some of the most important slaughtering and meat-packing establishments in the state. Since the census presents statistics for only those establishments which are within the corporate limits of cities, these slaughtering plants, which may be regarded as a part of Fort Worth's manufacturing industries, are not included in the totals for that city. The leading industries within the city are flour mills and gristmills and rice cleaning and polishing.

In the remaining cities shown in the preceding table, the largest industries in 1909 were the flour mills and gristmills in Galveston and Sherman; the cleaning and polishing of rice in Beaumont; the cottonseed-oil industry in Waco, Austin, Paris, and Temple; steam-railroad repair shops in Cleburne, Denison, El Paso, Laredo, Marshall, Palestine, and Tyler; printing and publishing in San Angelo; and the manufacture of ice in Brownsville.

The statistics for that part of Texarkana which lies in Texas are included with those for the outside district in the table on page 779. The following statement presents the totals for the entire city and for the parts situated in Texas and Arkansas, respectively:

	Total for city.	Texarkana, Tex.	Texarkana, Ark.
Population.....	15,445	9,790	5,655
Number of establishments.....	47	26	21
Persons engaged in manufactures.....	1,063	823	240
Proprietors and firm members.....	40	18	22
Salaried employees.....	148	103	45
Wage earners (average number).....	875	702	173
Primary horsepower.....	2,902	1,567	1,335
Capital.....	\$1,792,436	\$1,394,049	\$398,387
Expenses.....	2,405,671	1,422,203	983,468
Services.....	675,548	466,375	109,173
Salaries.....	156,519	121,926	34,593
Wages.....	419,029	344,449	74,580
Materials.....	1,671,127	849,110	822,017
Miscellaneous.....	158,996	106,718	52,278
Value of products.....	2,646,521	1,594,434	1,052,087
Value added by manufacture (value of products less cost of materials).....	975,394	745,324	230,070

The leading industries of Texarkana, Tex., are the cooperage shops and the railroad repair shops, and of Texarkana, Ark., the manufacture of flour-mill and gristmill products and of cottonseed oil and cake.

**Character of ownership.**—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises.

For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909 only are presented for several important industries individually. In order to avoid disclosing the operations of individual concerns it is necessary to omit several important industries from this table and the one following.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 29.5 per cent of the total number of establishments were in 1909 under corporate ownership, as against 70.5 per cent under all other forms. The corresponding figures for 1904 were 26.6 per cent and 73.4 per cent, respectively. In respect to value of products, however, the establishments under corporate ownership are by far the most important. For all industries combined, as measured by value of products and value added by manufacture, as well as by number of establishments and average number of wage earners, corporate ownership gained ground during the five-year period. Among the important industries not shown in this table, it is worthy of note that all of the establishments engaged in steam-railroad car repair work and in the manufacture of cotton goods, and by far the larger number of those engaged in the brewery, rice cleaning and polishing, and slaughtering and meat-packing industries were under corporate ownership.

INDUSTRY AND CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.	INDUSTRY AND CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

<sup>1</sup> Includes the group "Other," to avoid disclosure of individual operations.

**Size of establishment.**—The tendency of manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it the next table groups the establishments according to the value of their products.

The table also shows the average size of establishments for all industries combined and for important industries separately, as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for the individual industries figures are given for 1909 only.

This table shows that in 1909, of the 4,588 manufacturing establishments in the state, only 36, or

eight-tenths of 1 per cent, had a value of products exceeding \$1,000,000. These establishments, however, had an average of 9,186 wage earners, or 13.1 per cent of the total number in all establishments, and reported 37.4 per cent of the total value of products and 20.1 per cent of the total value added by manufacture.

On the other hand, the very small establishments—that is, those having a value of products of less than \$5,000—constituted a considerable proportion (38.1 per cent) of the total number of establishments, but the value of their products amounted to only 1.6 per cent of the total. The great bulk of the manufacturing was reported by establishments having a product valued at not less than \$100,000.

INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.	INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

\* Includes the group "\$1,000,000 and over."

\* Includes the group "\$100,000 and less than \$1,000,000."

It will be seen from the table that during the five years from 1904 to 1909 there was a considerable increase as measured by value of products in the relative importance of the largest establishments—those reporting products of not less than \$1,000,000 in value—and a decrease in that of all other classes.

The fact that the average value of products per establishment increased from \$47,666 to \$59,480, and the average value added by manufacture from \$18,659 to \$20,645, can not be taken as in itself indicating a tendency toward concentration. The increased values shown may be, and probably are, due in part to the increase that has taken place in the prices of com-

modities. The average number of wage earners per establishment decreased from 16 to 15.

The table shows further that when the size of establishments is measured by the average value of products per establishment the bakery and the printing and publishing industries are conducted in comparatively small establishments, while the flour mills and gristmills and the cottonseed-oil mills are mainly large establishments. Among the important industries not shown in the table, the majority of the steam-railroad repair shops, cotton mills, breweries, rice mills, and slaughtering and meat-packing establishments are large.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed.

The following table shows, for 1909, such a classification for all industries combined and for 15 important industries individually, and gives not only the number of establishments falling into each group, but also the average number of wage earners employed.

INDUSTRY.	Total.	ESTABLISHMENTS EMPLOYING—								
		No wage earners.	1 to 5 wage earners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners.	501 to 1,000 wage earners.	Over 1,000 wage earners.

Of the 4,588 establishments reported for all industries, 10.4 per cent employed no wage earners; 53.2 per cent, from 1 to 5; 23.7 per cent, from 6 to 20; and only 12.6 per cent, 21 and over. The most numerous single group consists of the 2,440 establishments employing from 1 to 5 wage earners, and the next of the 1,089 establishments employing from 6 to 20 wage earners. There were 36 establishments that employed over 250 wage earners; 3 of these employed over 1,000 each, of which 2 were slaughtering and meat-packing establishments and 1 a steam-railroad repair shop.

Of the total number of wage earners, 24.5 per cent

were in establishments employing over 250 wage earners. The single group having the largest number of wage earners was the group comprising the establishments employing from 101 to 250 wage earners. This group employed 16,809 wage earners, or 23.9 per cent of the total. The individual industries listed in this table, but not in the preceding one, namely, steam-railroad repair shops and slaughtering and meat packing, are industries in which comparatively large establishments do most of the business, as appears from the classification according to the number of wage earners.

**Expenses.**—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses which make up the total.

The following table shows, for 1909, in percentages, the distribution of expenses among the classes indicated, for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II, page 794.

This table shows that, for all industries combined, 72.8 per cent of the total expenses were incurred for materials, 19.9 per cent for services—that is, salaries and wages—and but 7.3 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries.

INDUSTRY.	PER CENT OF TOTAL EXPENSES RETURNED			
	Salaries.	Wages.	Materials.	Miscellaneous expenses.
All industries.....	4.4	15.5	72.8	7.3
Bread and other bakery products.....	4.0	14.9	67.8	13.3
Brick and tile.....	7.7	38.7	37.1	16.5
Cars and general shop construction and repairs by steam-railroad companies.....	5.4	50.3	41.5	2.8
Cotton goods, including cotton small wares.....	2.4	20.0	71.6	6.0
Flour-mill and gristmill products.....	1.9	2.2	92.9	3.1

Printing and publishing.....	18.0	30.2	30.4	21.5
Rice, cleaning and polishing.....	2.8	2.4	90.5	4.2
Slaughtering and meat packing.....	1.7	4.6	91.4	2.3
All other industries.....	4.7	12.3	76.3	6.6

**Engines and power.**—The following table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

The amount of primary power used in the manufacturing industries of Texas increased 48,480 horsepower, or 41.7 per cent, from 1899 to 1904, and 117,834 horsepower, or 71.6 per cent, from 1904 to 1909. The greater part of these increases was in power generated by steam engines, 91.5 per cent of the total increase from 1899 to 1904 and 79.9 per cent of the total increase from 1904 to 1909 being of this kind, although the proportion which steam power formed of the total primary power reported decreased from 95.5 per cent in 1899 to 88.3 per cent in 1909.

There was an increase in every form of primary power from 1904 to 1909 except water power and other owned power, both of which show a decrease. The more general use of gas engines is shown, there

being 802 such engines, with an indicated capacity of 15,745 horsepower, reported in 1909, as against 403 engines with 1,876 horsepower in 1904, and 199 engines with 968 horsepower in 1899. The figures also show that the practice of renting electric power is increasing, 5.3 per cent of the total power being of this character in 1909, as against but 2.7 per cent in 1904 and 2.1 per cent in 1899. The use of electric motors for the purpose of applying the power generated within the manufacturing establishments reporting is also shown to be rapidly growing, the horsepower of such motors increasing from 827 in 1899 to 5,885 in 1904 and 21,582 in 1909.

POWER.	NUMBER OF ENGINES OR MOTORS.			HORSEPOWER.			PER CENT DISTRIBUTION OF HORSEPOWER.

<sup>1</sup> Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.  
<sup>2</sup> Not reported.      <sup>3</sup> Less than one-tenth of 1 per cent.

**Fuel.**—Closely related to the question of kind of power employed is that of the fuel consumed in generating this power, or otherwise used as material in the manufacturing processes. The following table shows the quantity of each kind of fuel used in 1909 for all industries combined and for certain selected industries:

INDUSTRY.	Anthracite coal (tons).	Bituminous coal (tons).	Coke (tons).	Wood (cords).	Oil, including gasoline (barrels).	Gas (1,000 feet).

NOTE.—In addition, there were 12,946 tons of other varieties of fuel reported.

## SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials and the quantity and value of products and other information for securing which no provision is made on the general schedule. Data of this character for six important industries in Texas are here presented.

**Slaughtering and meat packing.**—This industry, which is one of the youngest in the state, shows remarkable development during the decade 1899–1909 in every respect. As late as the census of 1889 there were no wholesale slaughtering or meat-packing establishments reported for the state, and only four independent sausage factories, with products valued at \$42,000. Important factors in the growth of this industry in Texas have been that most of the animals slaughtered were raised in the state and that the rapidly increasing population has created a demand for home-grown meats which did not formerly exist.

The next table gives the quantity and cost of the chief materials used and the quantity and value of the various products for 1909, 1904, and 1899.

There were 242,174, or 84.9 per cent, more beeves slaughtered in 1909 than in 1904; 140,079, or 148.9 per cent, more calves; 27,974, or 56.1 per cent, more sheep; and 592,634, or 170.8 per cent, more hogs. In each case, however, the increase in cost was relatively much greater than the increase in number.

From 1904 to 1909 the quantity of each of the different classes of meat products, with the exception of those included under the head of "Beef, salted or cured," and "All other fresh meat," increased decidedly, the most conspicuous gains being 234 per cent in fresh pork and 202.9 per cent in fresh veal. The most pronounced absolute gain was that of 102,098,320 pounds in fresh beef, representing a relative increase, however, of only 96.3 per cent. "Pork, salted or cured," which was next to fresh beef in quantity reported, shows an increase of 44,960,543 pounds, or 171.2 per cent. The percentages of increase in values are somewhat greater than those in the quantities of meat products, on account of the higher prices of meats prevailing in 1909 than in 1904. Of the remaining products shown separately, lard was the largest, both in quantity and in value, with an increase during the five-year period 1904–1909 of 56.1 per cent and 105.3 per cent, respectively. The value of the products included under "All other products" shows the extraordinary gain of nearly 300 per cent during the same period, which was due almost entirely to the increased production of lard substitutes.

MATERIAL OR PRODUCT.	1909	1904 <sup>1</sup>	1899 <sup>1</sup>

<sup>1</sup> Two establishments excluded, to avoid disclosure of individual operations.<sup>2</sup> Included in "All other products."

**Flour-mill and gristmill products.**—In 1909 the cereal crop was light, and the prices of grain were somewhat above the normal. The following tabular statement shows the quantity and value of the principal products for 1909 and 1904:

PRODUCT.	QUANTITY.		VALUE.	
	1909	1904	1909	1904
<b>Total value.....</b>			<b>\$32,484,612</b>	<b>\$22,083,136</b>
Wheat flour:				
White..... barrels.....	3,339,479	3,223,390	19,110,676	16,466,591
Graham..... barrels.....	2,556	4,990	14,158	25,229
Corn meal and corn flour, barrels.....	877,314	599,375	2,875,994	1,477,014
Rye flour..... barrels.....	1,551	540	9,069	2,600
Hominy and grits..... pounds.....	188,000	128,000	3,520	1,920
Feed..... tons.....	280,163	61,377	7,325,154	1,371,374
Offal..... tons.....	120,122	139,496	3,104,771	2,705,334
All other products.....			41,270	83,014

An increase is shown in the quantity of each class of products except Graham flour and offal. The chief product, white flour, showed the smallest relative increase in quantity, 3.6 per cent, but an increase of 16.1 per cent in value. There were gains both in quantity (46.4 per cent) and in value (94.7 per cent) of corn meal and corn flour combined. The large increase in the tonnage of feed, 218,791 tons, or 356.5 per cent, was accompanied by a comparatively small decrease in the quantity of offal, 19,374 tons, or 13.9 per cent. "Offal" largely consists of the by-products obtained in the manufacture of wheat flour. Although offal, like feed, is used for animal consumption, it is distinguished from "Feed" as reported in the table in that the latter is manufactured largely from corn and is a primary product of the mills.

The mills were equipped in 1909 with 1,781 pairs of rolls, 187 runs of stone, and 2 attrition mills. Eight establishments manufactured the barrels and 11 the sacks used as containers for marketing their product.

**Lumber and timber products.**—Texas ranked seventh among the states of the Union in the cut of lumber in 1909. The following is a statement of the three main classes of products of the sawmill branch of the industry for 1909 and 1899:

PRODUCT.	QUANTITY.	
	1909	1899
Rough lumber.....M feet b. m.....	2,099,130	1,232,404
Shingles.....thousands.....	137,719	210,633
Lath.....thousands.....	59,627	4,181

The production of rough lumber increased 70.3 per cent during the decade 1899-1909, while that of shingles decreased 34.6 per cent. More than thirteen times the quantity of lath was reported in 1909 as in 1899. Of the total cut of 2,099,130 M feet board measure, in 1909, 2,021,617 M feet was softwoods, of which the shortleaf yellow pine, with 2,019,423 M feet, contributed the greater part. Of the 77,513 M feet of hardwoods cut, 47,252 M feet, or 61 per cent, was oak.

**Oil, cottonseed, and cake.**—In 1909 Texas produced a greater amount of cottonseed oil than any other state in the Union, contributing 21.2 per cent of the total production in the United States during that census year.

The following table shows the quantity of cotton seed crushed and the quantities of crude products manufactured, in 1909, 1904, and 1899.

The totals presented pertain to all cotton seed crushed, and to the crude products manufactured, whether sold as such or used as intermediate products in further processes of manufacture, such as the refining of oil and the mixing of fertilizer and feed.

MATERIAL OR PRODUCT.	QUANTITY.		
	1899	1904	1909
Cotton seed crushed.....tons.....	916,374	864,767	692,604
Crude products manufactured:			
Oil.....gallons.....	33,497,933	32,239,649	24,354,695
Meal and cake.....tons.....	395,791	340,709	252,983
Hulls.....tons.....	340,523	337,233	328,119
Linters.....pounds.....	46,994,462	33,307,490	15,544,379

The average amount of seed crushed per mill has fallen off from census to census during the last decade, being 6,790 tons in 1899, 5,579 tons in 1904, and 4,773 tons in 1909. The total quantity crushed increased, however, from 692,604 tons in 1899 to 916,374 tons in 1909, or 32.3 per cent. Of the 192 mills reported in 1909 as crushing seed, 18 crushed less than 1,000 tons each during the census year; 21 crushed 1,000 tons but less than 2,000; 86 crushed 2,000 tons but less than 5,000; 51 crushed 5,000 tons but less than 10,000; 13 crushed 10,000 tons but less than 20,000; and 3 crushed 20,000 tons and over.

There has been a continuous increase since 1899 in the total quantity of each of the several products, though that in hulls was very small. In proportional weight, hulls decreased from 947.5 pounds per ton of seed crushed in 1899 to 743.2 pounds per ton in 1909; meal and cake increased from 730.5 pounds per ton in 1899 to 863.8 pounds in 1909; linters increased from 22.4 pounds per ton in 1899 to 51.3 pounds in 1909; and the quantity of crude oil increased from 35.2 gallons per ton of seed crushed in 1899 to 36.6 gallons in 1909.

**Printing and publishing.**—This industry as a whole shows considerable growth in Texas during the last 10 years as measured by the financial statistics, and likewise by the general increase in the number of publications and aggregate circulation during the same period, as shown by the following table, in which the number of the various classes of publications and the aggregate circulation per issue are presented for 1909, 1904, and 1899:

CLASS OF PUBLICATION.	NUMBER OF PUBLICATIONS.			AGGREGATE CIRCULATION PER ISSUE.		
	1909	1904	1899	1909	1904	1899
Total.....	962	817	756	2,180,922	1,762,692	1,054,761
Daily.....	99	87	83	330,562	245,370	147,602
Sunday.....	30	20	34	302,189	223,150	(1)
Semiweekly.....	228	18	22	285,816	227,909	101,392
Weekly.....	728	629	579	964,524	834,434	732,887
Monthly.....	64	54	33	256,700	211,929	61,400
All other classes.....	13	9	5	61,131	19,900	11,500

<sup>1</sup> Included in circulation of dailies.

<sup>2</sup> Includes one triweekly.

During the 10-year period the number of publications increased 206, or 27.2 per cent, while the aggregate circulation per issue increased 1,126,161, or 106.8

per cent. The weekly publications are by far the most important class in the state, measured either by number or by aggregate circulation per issue, and in both respects they showed a substantial increase during each of the five-year periods. All of the other classes of publications showed large gains in their aggregate circulation for both five-year periods, although the number of Sunday and semiweekly publications decreased somewhat between 1899 and 1904. Most of the publications were printed in English, but there were 29 in German, including 1 German and English; 20 in Spanish, including 2 Spanish and English; 4 in Bohemian; and 2 each in Swedish and Italian.

**Rice, cleaning and polishing.**—The growth of this industry in Texas has been phenomenal. In 1899 there was only 1 establishment engaged in the cleaning and polishing of rice, while in 1909 the number was 19 and the quantity of rice treated amounted to 38.1 per cent of the total for the country. Ten of the establishments reporting were engaged in merchant milling only, while 9 did both merchant and custom milling, treating 42,871,365 pounds on a custom basis.

The total quantity of rice milled (both merchant and custom), and the quantities of the various products, for the census years 1909 and 1904, are shown in the following tabular statement:

MATERIAL OR PRODUCT.	QUANTITY (POUNDS).	
	1909	1904
Rough rice, milled.....	371,816,370	316,170,405
Products manufactured:		
Clean rice.....	236,117,295	197,433,320
Whole.....	156,877,308	102,812,839
Broken.....	79,239,987	94,620,481
Polish.....	10,402,638	9,500,830
Bran.....	33,505,946	40,772,421
Hulls.....	43,717,550	168,463,834

<sup>1</sup> Includes waste.

The total quantity of rice milled increased 55,645,965 pounds, or 17.6 per cent, during the five-year period. The proportion of whole rice in the total amount of clean rice increased from 52.1 per cent to 66.4 per cent. A change in the varieties of rice grown and improvements in methods of treatment account largely for the greater proportional output of whole rice in 1909, as compared with 1904, and a relatively smaller production of broken rice. The decided decreases in the quantities of bran and hulls are due, to some extent, to the use of the former of these products in 1909 in the manufacture of feed and to the inclusion of waste with hulls in 1904.

**Laundries.**—Statistics for steam laundries are not included in the general tables or in the totals for manufacturing industries. In 1909 there were 127 such establishments in Texas, 66 of which were in cities of 10,000 inhabitants or more.

The following statement summarizes the statistics:

Number of establishments.....	127
Persons engaged in the industry.....	3,514
Proprietors and firm members.....	150
Salaried employees.....	291
Wage earners (average number).....	3,073
Primary horsepower.....	3,195
Capital.....	\$2,005,200
Expenses.....	2,629,766
Services.....	1,554,999
Materials.....	471,421
Miscellaneous.....	603,346
Amount received for work done.....	3,220,315

The most common form of ownership was the individual, with 50 establishments. The firm and corporate forms of ownership were represented by 41 and 36 establishments, respectively. Twenty-nine establishments had receipts for the year's business of less than \$5,000; 48, \$5,000 but less than \$20,000; 44, \$20,000 but less than \$100,000; and 6, \$100,000 but less than \$1,000,000.

The number of wage earners employed each month and the per cent which this number represented of the greatest number employed in any month were as follows:

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	2,791	85.0	July.....	3,232	98.4
February.....	2,847	86.7	August.....	3,284	100.0
March.....	2,891	88.0	September.....	3,277	99.8
April.....	2,976	90.6	October.....	3,172	96.6
May.....	3,048	92.8	November.....	3,112	94.8
June.....	3,160	96.2	December.....	3,090	94.1

The different kinds of primary power, the number of engines or motors, and the horsepower used in 1909 are shown in the following tabular statement:

KIND.	Number of engines or motors.	Horse-power.
Primary power, total.....		3,195
Owned:		
Steam.....	120	2,865
Gas.....	3	57
Rented:		
Electric.....	112	263
Other.....		10

The kind and amount of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal.....	Tons.....	4
Bituminous coal.....	Tons.....	41,990
Coke.....	Tons.....	53
Wood.....	Cords.....	4,275
Oil.....	Barrels.....	17,410
Gas.....	1,000 feet.....	67,086

Custom sawmills and gristmills. — Statistics for custom sawmills and gristmills are not included in the general tables or in the totals for manufacturing industries. Those for custom sawmills, of which there are only two, can not be shown without disclosing

individual operations, but those for custom gristmills are presented in the following summary:

	Custom gristmills.
Number of establishments.....	412
Persons engaged in the industry.....	969
Proprietors and firm members.....	561
Salaried employees.....	4
Wage earners (average number).....	404
Primary horsepower.....	14,341
Capital.....	\$449,944
Expenses.....	785,444
Services.....	29,162
Materials.....	1,745,361
Miscellaneous.....	10,921
Value of products.....	1,924,427

<sup>1</sup> Includes estimate of all grain ground.

## STATISTICS OF MANUFACTURES.

789

## CHAPTER 6.

### MINES AND QUARRIES.

**Introduction.**—The present chapter contains a complete statement of the statistics of all mining industries, which include all mines, quarries, and wells in the state of Texas for the year 1909, as shown by the Thirteenth Census.

A brief explanation of the scope of the census of mining industries and of the terms used, in so far as the usage differs from that followed in the census of manufactures, is presented below in order to prevent any misinterpretation of the statistics.

The explanations here given show the usage of the mining census generally; though some of the special rules have obviously no relation to particular states in which the industries referred to do not exist.

**Scope of census.**—The Thirteenth Census covered all classes of mines, quarries, and petroleum and gas wells that were in operation during any portion of the year 1909, both those which were producing and those whose operations were confined to development work. Mines, quarries, or wells that were idle during the entire year 1909 were omitted from the canvass. The following operations were likewise omitted from the canvass: Prospecting; the digging or dredging of sand and gravel for the construction of roads and for building operations; the production of mineral waters; and the operation of small bituminous coal banks producing less than 1,000 tons annually.

Where the mineral products are not marketed in their crude condition, but are dressed or washed at the mine or quarry, the statistics of mining cover the entire work of obtaining the crude material and its preparation for the market.

**Period covered.**—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for enterprises which began or discontinued business during the year.

**Number of operators.**—As a rule, the unit of enumeration was the "operator." Every individual, firm, or corporation was required to furnish one report for all mines, quarries, or wells which were operated under the same management or for which one set of books of account was kept. Separate reports were obtained for all properties operated in different states, even where they were owned by the same operator. Likewise, where the operations of one individual, firm, or corporation covered more than one class of mines and quarries, such as coal, iron, limestone, etc., a separate report was received for each industry.

**Number of mines, quarries, and wells.**—This figure represents the total number of mines and quarries in operation or in the course of development at any time during the calendar year 1909, or the business year that corresponds most nearly to that calendar year, and the number of completed petroleum and natural gas wells in operation on December 31, 1909.

In most mining and quarrying industries the number of mines or quarries varies but little from the number of operators.

**Expenses of operation and development.**—A certain amount of development work is incidental to the operation of every mine. The expenses reported for producing mines include the cost both of operation and of development work which was done in connection with operation.

**Wages.**—The amount shown as wages includes only the compensation of regular wage earners hired by the day, week, or month, or under the piecework system.

**Supplies and materials.**—This item includes the cost of lumber and timber used for repairs, mine supports, track ties, etc.; iron and steel for blacksmithing; rails, frogs, sleepers, etc., for tracks and repairs; renewals of tools and machinery and materials for repairs; and supplies, explosives, oil, etc., as well as the cost of fuel and the rent of power. The schedule called only for the cost of such supplies and materials as had been used during the year covered by the report. Accurate figures, however, could be furnished only in those cases where the operators kept an account of supplies and materials used, or had an inventory made of all in stock at the beginning and at the end of the year. Such a system of accounting is far from general among mine operators, and there is reason to believe that in many cases the reported cost of supplies and materials covered all purchased during the year rather than those used during the year. The crude product of some operators was purchased by others for further dressing or refining; the cost of such materials is shown separately in the general table.

**Capital.**—The census schedule required every operator to state the total amount of capital invested in the enterprise on the last day of the business year reported, as shown by his books. There is, however, a great diversity in the methods of bookkeeping in use by different operators. As a result, the statistics for capital lack uniformity. Some of the figures reported apparently represent capital stock at face value; others include large investments in mineral lands which are not at present being actively mined, but are held in reserve; still others may include expenditures for unproductive mining ventures in no way related to the operations carried on during the census year.

**Persons engaged in mining industries.**—The statistics of the number of operators and officials, clerks, and wage earners, are based on the returns for December 15, or the nearest representative day. The reported number of wage earners includes overseers and foremen performing work similar to that of the men over whom they have charge; those whose duties are wholly supervisory are classed as superintendents and managers. Because of the common practice of shutting down mines at frequent intervals, it is impossible to ascertain with any satisfactory degree of accuracy the average number of employees—that is, the number who, if continuously employed, would be required to produce the actual output of the year.

**Value of products.**—Statistics of the value of mineral products were obtained by the Bureau of the Census in cooperation with the United States Geological Survey, but the two bureaus follow different methods in presenting these statistics. The Geological Survey shows separately the value of each mineral product, whereas the Bureau of the Census presents the value of products of each mining industry. The value of products given for a mining industry often includes the value of some products not covered by the industry designation. The crude product of metalliferous mines may include varying combinations of metals, such as gold, silver, copper, lead, zinc, and iron. Similarly, the total value of all products of the granite quarries is not identical with the value of the total output of granite, but may include the value of some marble or other stone quarried in connection with the principal product.

The value of products for 1909 in most cases represents the value of the products marketed during that year, not the value of those mined during that year.

## MINING IN TEXAS.

**Summary.**—Statistics for all mining enterprises in the state of Texas are presented in Table 7, which gives statistics for all industries combined and for producing enterprises separately in all cases where the statistics could be given without disclosing the operations of an individual enterprise. Statistics for non-producing enterprises are also given separately from producing enterprises.

The gross value of the products of mining enterprises in Texas in 1909 was \$10,742,150. Deducting from this amount, \$35,313, the value of the natural gas produced and sold by some operators to others who sold it again, leaves \$10,706,837 as the net value of the products. Of this amount, \$6,356,000, or 59.4 per cent, was reported by the petroleum and natural gas industry. Bituminous coal and gypsum mining, the industries next in importance, reported products valued, respectively, at \$3,136,004 and \$387,730.

In the production of clay the expenses of operation and development exceeded the value of the products. This was due in part to unprofitable mining ventures and in part to expenditures for development work resulting in permanent improvements to the mining properties.

**Character of organization.**—Table 1 classifies the producing mining operations of this state under form of organization, distinguishing corporations from individual owners and firms, while Table 2 gives further details for incorporated enterprises distinguished from those which are unincorporated. Out of a total of 236 operators, 101, or 42.8 per cent, were corporations. These corporations reported 82.1 per cent of the total value of products and employed 84.3 per cent of all wage earners. In the bituminous coal industry 90.3 per cent of the value of products was reported by corporations.

Value of products.....	\$10,621,004	\$1,020,146

**Size of enterprises.**—In Table 3 the producing enterprises of the state are classified according to the number of wage earners employed per enterprise or operating unit. Of the 238 enterprises reported, only 13 employed over 100 wage earners each. These enterprises, however, employed 62.9 per cent of the wage earners reported by all enterprises.

Over 100.....	10	50.0	3,313	48.3

**Prevailing hours of labor.**—In Table 4 all producing enterprises, except those employing no wage earners and those operated exclusively by contract work and part-time employees, have been classified according to the prevailing hours of labor per day in each enterprise or operating unit. Petroleum and natural gas wells are not included in this table, because the lack of regularity in the number of hours worked per day in a

large number of enterprises rendered such classification impracticable. The table shows the percentage of the total number of enterprises falling in each group, and also a per cent distribution in which each enterprise has been given a weight according to the total number of wage earners employed December 15, 1909, or the nearest representative day. It should be borne in mind that this latter distribution does not show the exact proportion of the total number of wage earners working the specified number of hours per day, since, in some cases, a part of the employees worked a greater or less number of hours than those generally prevailing in the enterprise.

For all industries combined a day of eight hours prevailed in 53.6 per cent of all enterprises weighted according to the number of wage earners. In the bituminous coal industry the corresponding percentage was 70.6.

Table 4

10 hours.....	13	44.8	27.9

<sup>1</sup> Exclusive of petroleum and natural gas and of 1 bituminous coal mine, for which number of hours was not reported.

**Duplication between manufactures and mining.**—In a number of industries some of the operators subjected the products obtained to certain manufacturing processes on the premises before marketing. These enterprises have been included in the statistics both for manufactures and for mining. As a result of this fact the combined value of products for the manufacturing and mining industries in Texas involves a duplication of \$437,990.

**Engines and power.**—As shown by Table 5, the total horsepower employed in all producing enterprises was 32,003, all of which was developed by engines owned by the enterprises using them.

Table 5  
PRODUCING ENTERPRISES: 1909

**Comparison of mining industries: 1902-1909.**—In order to make comparisons between 1909 and 1902 it is necessary to omit from the 1902 figures, as given in the mines and quarries report for that year, statistics for the production of cement and enterprises operated by governmental institutions; to omit from the 1909 figures, as they appear in other tables in this chapter, the value of the by-products of bituminous coal mines; and to add to the 1909 statistics, figures for the production of lime, which were omitted from the census of mines and quarries in 1909. Such items as are comparable for the two years are presented in Table 6.

<sup>1</sup> Includes operators as follows: Fuller's earth, 2; gold and silver, deep mines, 2; iron, 1; quicksilver, 1.

<sup>2</sup> Includes operators as follows: Bituminous coal, 1; gold and silver, deep mines, 1; marble, 1; petroleum and natural gas, 19.

<sup>3</sup> Includes \$16,456 which could not be distributed among the several industries. Exclusive of capital which could not be distributed by states because it was reported in one lump sum by operators having mining in vestments in two or more states.

<sup>4</sup> In some cases the same operator conducted two or more enterprises producing different kinds of products, all enterprises being managed through one central administrative office. The total office expenses were accordingly apportioned among the several industries in proportion to the total expenses of each and the estimated amounts of such administrative expenses were added to "Sundry expenses" for each industry. In the totals for all enterprises, however, the expenses appear under the proper headings. The amounts included in "Rent of offices and other sundry expenses" for individual industries and properly distributed in the total for all industries are as follows: Salaried officers of corporations, superintendents, and managers, \$2,700; and clerks and other salaried employees, \$400.

<sup>5</sup> The following numbers of persons, which could not be distributed among the several industries, are included under the proper headings in the totals for all enterprises: Aggregate, 3; salaried officers of corporations, 2; and clerks and other salaried employees, 1.

# INDEX TO THE ABSTRACT TABLES.

## POPULATION.

NOTE.—Statistics are given somewhat more frequently for cities of 100,000 inhabitants and over than for those of 25,000 to 100,000 inhabitants. Where an asterisk (\*) follows the reference, cities of 25,000 inhabitants and upward are included, otherwise the figures relate only to cities having 100,000 inhabitants or more.

## MANUFACTURES—INDUSTRIES—Continued.

	Page.		Page.
Cars and general shop construction and repairs by steam-railroad companies.	442,	Liquors, vinous.	514
453, 455, 460, 465, 468, 470, 472, 506, 514		Locomotives, not made by railroad companies.	514
Cars and general shop construction and repairs by street-railroad companies.	506, 514	Looking-glass and picture frames.	514
Cars, steam-railroad, not including operations of railroad companies.	442,	Lumber and timber products.	442, 453, 455, 460, 465, 468, 470, 472, 509, 514
453, 455, 465, 468, 470, 472, 506, 514		Malt.	514
— street-railroad, not including operations of railroad companies.	507, 514	Marble and stone work.	442, 453, 455, 468, 470, 472, 514
Cash registers and calculating machines.	514	Matches.	514
Cement.	503, 514	Mats and matting.	514
Charcoal.	514	Mattresses and spring beds.	514
Chemicals.	442, 453, 455, 465, 468, 470, 472, 495, 514	Millinery and lace goods.	456, 514
China decorating.	514	Mineral and soda waters.	514
Chocolate and cocoa products.	514	Mirrors.	514
Clocks and watches, including cases and materials.	456, 514	Models and patterns, not including paper patterns.	514
Cloth, sponging and refinishing.	514	Moving pictures.	514
Clothing, horse.	456, 514	Mucilage and paste.	514
— men's, buttonholes.	514	Musical instruments and materials, not specified.	514
— including shirts.	442, 453, 455, 460, 465, 468, 470, 472, 514	Musical instruments, pianos and organs and materials.	509, 514
— women's.	442, 453, 455, 460, 465, 468, 470, 472, 514	Needles, pins, and hooks and eyes.	456, 514
Coffee and spice, roasting and grinding.	514	Oakum.	514
Coffins, burial cases, and undertakers' goods.	514	Oil, castor.	514
Coke.	496, 514	— cottonseed, and cake.	442, 453, 455, 460, 465, 468, 470, 472, 499, 514
Confectionery.	514	— essential.	500, 514
Cooperage and wooden goods, not elsewhere specified.	514	— linseed.	514
Copper, tin, and sheet-iron products.	514	— not elsewhere specified.	514
Cordage and twine and jute and linen goods.	456, 481, 514	Oilcloth and linoleum.	514
Cordials and sirups.	514	Oleomargarine.	514
Cork, cutting.	456, 514	Optical goods.	514
Corsets.	456, 514	Paint and varnish.	442, 453, 455, 465, 468, 470, 472, 500, 514
Cotton goods, including cotton small wares.	442, 453, 455, 460, 465, 468, 470, 472, 482, 514	Paper and wood pulp.	442, 453, 455, 465, 468, 470, 472, 510, 514
Crucibles.	514	Paper goods, not elsewhere specified.	456, 514
Cutlery and tools, not elsewhere specified.	514	Paper patterns.	514
Dairy men's, poultryers', and apiarists' supplies.	514	Patent medicines and compounds and druggists' preparations.	442,
Dentalists' materials.	514	453, 455, 465, 468, 470, 472, 514	
Dyeing and finishing textiles.	456, 514	Paving materials.	514
Dyestuffs and extracts.	497, 514	Pencils, grading, roasting, cleaning, and shelling.	456, 514
Electrical machinery, apparatus, and supplies.	442, 453, 455, 465, 468, 470, 472, 508, 514	Pencils, lead.	456, 514
Emery and other abrasive wheels.	514	Pens, fountain, stylographic, and gold.	514
Enameling and japanning.	514	— steel.	456, 514
Engravers' materials.	514	Petroleum, refining.	442, 453, 455, 465, 468, 470, 472, 501, 514
Engraving and diesinking.	514	Phonographs and graphophones.	510, 514
Engraving, wood.	514	Photo-engraving.	514
Explosives.	497, 514	Photographic apparatus and materials.	514
Fancy articles, not elsewhere specified.	514	Pipes, tobacco.	514
Fertilizers.	460, 498, 514	Pottery, terra-cotta, and fire-clay products.	456, 514
Fire extinguishers, chemical.	514	Printing and publishing.	442, 453, 455, 460, 465, 468, 470, 472, 511, 514
Firearms and ammunition.	514	Pulp goods.	514
Fireworks.	456, 514	Pumps, not including steam pumps.	514
Flags, banners, regalia, society badges, and emblems.	456, 514	Rice, cleaning and polishing.	460, 477, 514
Flavoring extracts.	456, 514	Tooling materials.	514
Flax and hemp, dressed.	514	Rubber goods, not elsewhere specified.	514
Flour-mill and gristmill products.	442, 453, 455, 465, 468, 470, 472, 477, 514	Rules, ivory and wood.	514
Food preparations.	456, 514	Safes and vaults.	514
Foundry and machine-shop products.	442, 453, 455, 460, 465, 468, 470, 472, 514	Salt.	501, 514
Foundry supplies.	514	Sand and emery paper and cloth.	514
